

QTS 4.2.2 NAS Operating System

VJBOD

Software-defined storage
On demand, instant
storage expansion

Seamless Linux integration
using QNAP exclusive
QvPC technology

Your private IoT cloud
platform ideal for rapid IoT
development and deployment

Get rid of external drives and embrace QNAP NAS

1

Huge capacity, multiple backups

QNAP NAS come with intuitive management features and huge storage capacity potential. QNAP NAS support multiple RAID types to safeguard your data in the event of hard disk failure, in addition to enabling reliable data recovery.

*Data recovery capabilities depend on the RAID configuration of the NAS.

2

Always online, sharing anywhere

A QNAP NAS is your personal, private cloud enabling you quick access from any Internet connected device. Sharing is also much faster and easier without needing external drives and not being limited by the size of email attachments.

3

Multiple layers of data protection

QTS is built on the security first principal to minimize the risk of data breaches with multiple data protection mechanisms, and user privilege controls. Together these enable you to fine tune access to your data by person, device, and IP address to ensure peace of mind.

4

In-home entertainment and streaming

In addition to data storage, QNAP NAS are fully capable home entertainment systems. Stream multimedia to HDMI, DLNA®, AirPlay®, iTunes®, and Chromecast™ devices. Control media playback with your mobile devices and enjoy a lavish multimedia feast at home, and at your leisure.

5

Qsirch, fast full-text, real-time search engine

Powered by a full-text, near real-time search engine, Qsirch makes searching and browsing through masses of data a lot faster. Auto-completion in the search bar offers suggestions to save you time while the search results will highlight keywords in documents to help you quickly find what you are looking for. Additionally, fully editable saved searches, and results previewing make searching near-instantaneous.

The all-new QTS 4.2.2 incorporates many modifications to the user interface, enabling you to operate your NAS just like a PC. Moreover, the App Center encompasses a wide range of applications, including file management, backup, download, multimedia and entertainment, productivity tools, surveillance and many more. Why wait?

In addition to storing increasingly enormous amounts of data, Network-attached Storage (NAS) is further leveraging ROI and increasingly adding value to collaboration and simplified processes enhancing convenience in the workplace. NAS is enabling synchronization, communication, and collaboration for large, distributed teams while providing better data security. NAS users are finding fast, always available access to data and support for effective collaboration among team members are key priorities.

As the Internet of Things (IoT) and more "smart" devices emerge, smart homes, cities, and manufacturing are all entering this wave of industry transformation. Making good use of IoT - in conjunction with the proliferation of big data and mobile communications has become another critical focus for businesses in recent years.

QNAP NAS gives you the power to integrate your hardware with a complete cloud solution and IoT server. Add features to your NAS on the fly by installing apps from the App Center. All the apps are developed and shared in the Linux open source community, enabling you to leverage customizability and flexibility. All the App Center apps can be installed and run with just one click.

QNAP's NAS OS "QTS" has been re-engineered and redesigned to empower users with the flexibility and control they need. QTS is specifically architected to support and enable your workflow. QTS is designed and built with your work in mind, to help you increase your productivity from anywhere at any time. QTS 4.2.2 seamlessly integrates with your existing public cloud services to enhance data sharing and backup with better efficiency and reliability, and enabling boundless opportunities for NAS capacity expansion.

The International Data Corporation™ (IDC) state that the number of vendors offering Big Data services will triple over the next three years. The IDC also state that 70% of large organizations purchased public cloud storage and that will rise to 100% by 2019. Storage is no longer an afterthought. It is increasingly seen as a strategic investment priority for all companies regardless of their size, industry, or geography. In this era of big data, your data is key to opening new avenues of business opportunities.

QNAP has established a long and distinguished pedigree as a provider of storage infrastructure. Our professionalism and dedication to storage technology enables us to provide better hardware, software, and cloud solutions to align perfectly with your business requirements, whether a personal office or a large enterprise. We believe that the next-generation of NAS should embrace a broad range of enterprise management technologies and processes and utilize a high degree of software-hardware integration. In addition, we believe NAS should also connect to any public cloud providers and exhibit the following characteristics:

- The QNAP hybrid cloud fully supports both public and private cloud models – enabling a hybrid approach to managing cloud resources from the start and aims to optimize workloads and maximize ROI (return on investment).
- QNAP Tiering Technology enables the storage of data on different storage media according to its importance to the organization. Using data tiering, migration and snapshot technology balances the needs of capacity, performance, data protection, and total cost of ownership.
- A management platform that allows for a high degree of service flexibility. QNAP NAS is a converged platform and has the advantages of easy deployment, maintenance, expansion opportunities, virtualization-readiness, and more. The platform also improves IT operations with its scalability and built-in resilience, and delights developers with open APIs, freeing them to spend more time coding and focusing on innovation.
- An intelligent and agile platform. QNAP NAS offers utilities that accelerate big data processing involving cloud computing to speed up time-to-value and maximize IT impact on businesses and users. It employs an advanced file decoder and near real-time search engine to obtain real time results that can be used to keep you ahead of Big Data marketing and business opportunities.

If you want to advance to the technological frontier with smarter lifestyles and safer connectivity, please join us to travel through the cutting-edge of smart living technology with QTS 4.2.2.

QTS 4.2.2

Design of QTS 4.2.2 Operating System – Experience a simple and perfect design.....	4
Storage Management and Data Protection –	
Tiered storage and cloud backup management platform.....	6
File Station 4.2 – Manage all files from a single interface	
Local Snapshot and Snapshot Replica – An Efficient and economical way to protect files

Hyperconverged flexibility and performance	18
Storage Manager Unified storage management	
Qtier™ Technology – QNAP's auto-tiering technology	
Network & Virtual Switch – A complete overview of your network configuration	
VJBOD - best capacity utilization among multiple NAS	
Data Security – Secure your data with six protection mechanisms	30
App Center – Customize your QNAP NAS for endless possibilities.....	36
Comprehensive Virtualization Technology – VM or Container? You can have both!..	38
Virtualization Station 2.2– Support for GPU pass-through, shared network interfaces	
Container Station 1.3 – Rapidly deploy containers	
QNAP QvPC Technology – Use your NAS as a PC	
Surveillance Station 5.1 – Build a professional surveillance system	53
QUSBCam2 – A handy surveillance tool	
Multimedia Center – Enjoy home entertainment with cloud technology.....	58
Photo Station 5.2 – Record the precious moments in your life	
Video Station 2.5 – Entertainment beyond the limits of devices	
Music Station 4.8 – Build your own music cloud	
One-to-multiple streaming playback – Unleash an intelligent home entertainment lifestyle	
HD Station 3.1 – Use a QNAP NAS as a home theater center	
OceanKTV – Enjoy karaoke in the privacy of your home	
Download Station 4.2 – Your 24/7 download center	
Plex Media Server – Professional media server	
Qmedia – A player designed for Roku®	
Productivity Tools – Maximize the value of your QNAP NAS.....	76
myQNAPcloud 2.0 cloud access service – Helps you easily create your NAS cloud	
Qsync Central Station 2.0 – Centrally manage and sync your files and devices	

Table of Contents

- QRM+ – Unified Remote Server Management solution
- Q'center – Visual management platform for multi-NAS management
- QmailAgent 1.0 – Unified, secure, and convenient email with privacy protection
- Gmail Backup 1.3 – Dedicated storage for email backup
- Notes Station 2.1 – A handy notepad on your private cloud
- Signage Station 2.1 –The ultimate Do-It-Yourself signage solution
- Qsirch 2.2 – Search for everything on your QNAP NAS
- QNAP Helpdesk – Instantly receive technical support

QNAP Mobile App – Conveniently access your QNAP NAS from your mobile devices ... 98

- Qfile 2.0 – Access files stored on your NAS remotely
- Qmanager 2.0 – Remotely manage and monitor your QNAP NAS
- Qphoto 2.0 – Share photos on your NAS on the go
- Qmusic 2.0 – Listen to music stored on your NAS
- Qvideo 2.0 – Watch videos stored on your NAS
- Qnote 1.1 – Taking and sharing notes on the go
- Qget 1.3 – Remotely manage download tasks
- Vmobile 2.0 – Professional mobile surveillance app
- Vcam 1.0 – Turn your mobile device into an IP cam
- Qremote 1.1 – Control HD Station with your mobile phone

Computer Utilities – Boost your Productivity 111

- Qfinder Pro – Search, connect and set up your QNAP NAS
- myQNAPcloud Connect – VPN portal to your QNAP NAS
- Qsync – Sync files anytime and everywhere
- NetBak Replicator – Free PC backup software
- Q'center Virtual Appliance – Use Q'center to monitor multiple NAS
- QNAP Snapshot Agent – Ensures consistent snapshots
- vSphere Client plug-in – Manage QNAP NAS within vSphere Client
- QNAP SMI – S Provider Manage NAS directly through Microsoft SCVMM
- Qsnap – Take screenshots, quickly and easily

QNAP Product Overview 114

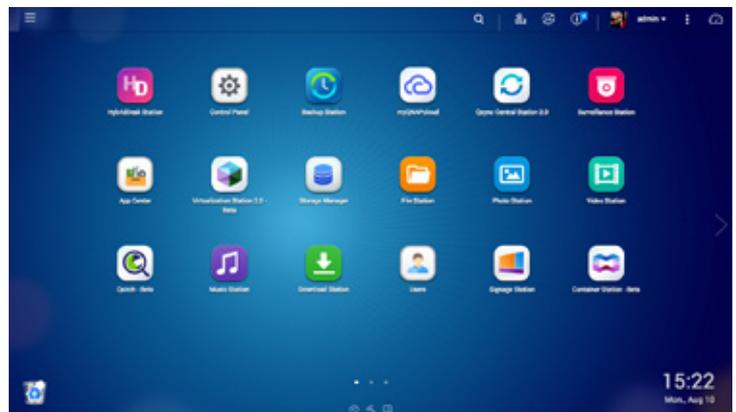

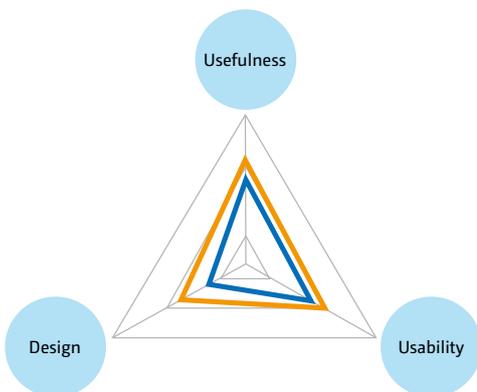

Design of QTS 4.2.2 Operation System

Experience a simple and perfect design

The completely redesigned QTS combines extensive user feedback, Human factors engineering reviews, and adheres to the principles of cognitive ergonomics. Simply put, QTS 4.2.2 looks tidy, works smoothly, and enables an easy NAS user experience on computers and mobile devices.

The QNAP operating system, QTS, has been re-engineered and optimized to perform elegantly, with a familiar PC feel. It is more intuitive, convenient and polished. Simply, more beautiful. Equipped with a variety of applications, QTS is simply designed to meet all your needs for storage, management, backup, multimedia, and surveillance.

Following positive feedback from over 10,000 users, we assembled a team of world-class UX designers to refine every QTS user interface. Now let's take an extensive look at the all-new QTS 4.2.2.

Improved design

Every QTS screen is designed to minimize unnecessary interference and clutter.

Improved usability

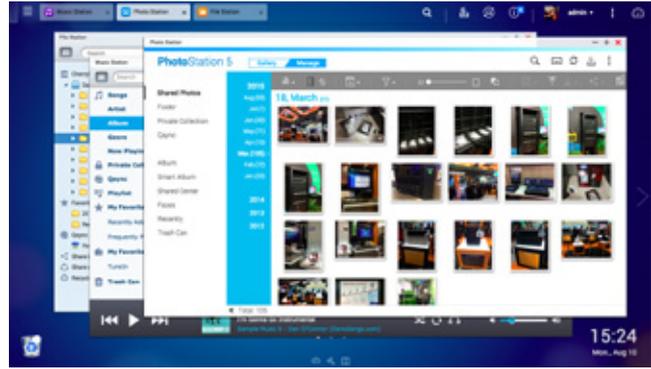

In a branch and root redesign, all QTS UX elements including buttons, links and icons, were carefully refined, ensuring users are able to intuitively use the system without prior learning. The simplified design style and optimized apps enable users familiar with QTS to vastly improve their user experience.

Improved utilization

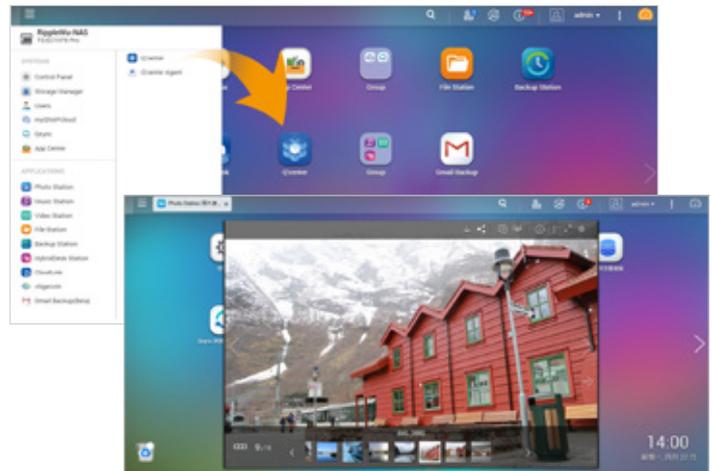

Intelligent, concurrent multi-tasking with enhanced modal windowing introduced in QTS 4.2 enables users to amplify their productivity. Remote monitoring, background tasks, and centralized management features ensure the highest utilization rate and optimal operation of your QNAP NAS.

Multitasking, multi-window, multi-desktop, and multi-display modes

The new QTS operating system dramatically improves your efficiency with multitasking, multi-window, multi-desktop, and multi-display modes enabling you to begin new tasks without waiting for the previous one to end. Similar to a traditional PC environment, you are able to minimize running apps onto the task bar and switch between them. For example, you can browse photos in Photo Station while listening to songs played in Music Station, and download files to a local computer to make the most of your NAS.

The multi-desktop design of QTS enables you to drag-and-drop shortcut icons from the Control Panel or Main Menu to the desktop to suit your preferences. You are also able to drag and drop a desktop icon on top of another one to group them together to create a personalized desktop for greater efficiency and convenience.

QTS applications have 3 modes: Tab, Window, and Frameless. The Tab mode enables convenient switching among screens when using QTS from a mobile device. The new and exclusive Frameless mode improves visibility when viewing photos.

Smart dashboard

The system status displays immediately with a single click on the icon in the upper-right corner of the desktop. Use the smart dashboard for a quick view of important information including system health, disk information and health, resource monitoring, storage space, scheduled tasks, device information, and firmware information. Drag and drop dashboard functions to the desktop to monitor them at any time. Moreover, in the event of a critical failure the smart dashboard will flash and prompt a system administrator to take immediate action to recover data and to prevent the loss of data.

Recycle Bin

The Recycle Bin enables you to recover files that have been accidentally deleted. Right-click on the Bin to empty it or open it to see the full range of functions available.

Storage Management and Data Protection

Tiered storage and cloud backup management platform

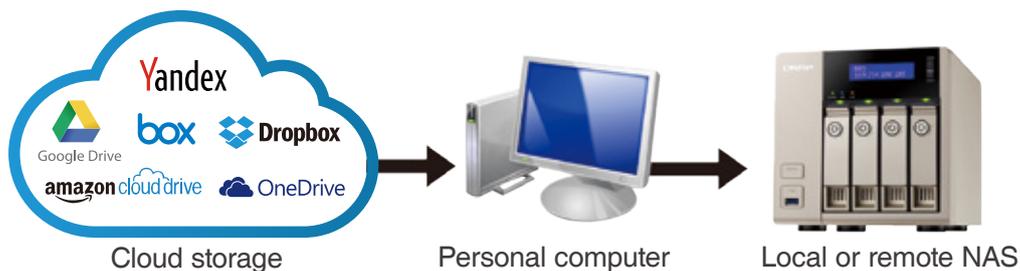

Complementing existing storage management and backup functions, the new Snapshot and Backup Versioning improves data security while lowering expenses. Integrating public cloud storage and backup services, your QNAP NAS is a converged storage management platform with on-premise, private, offsite, and cloud services.

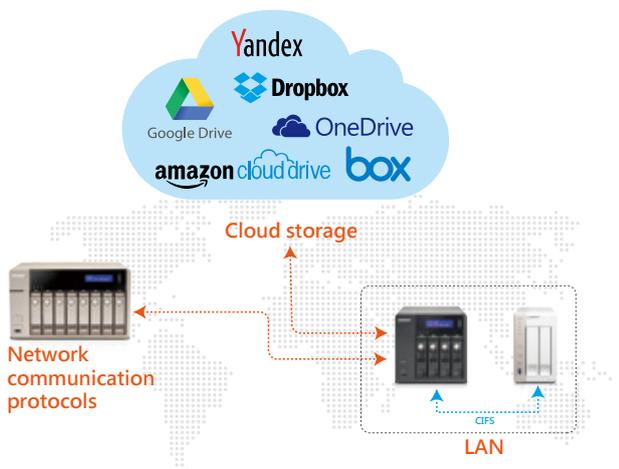

File Station 4.2

Manage all files from a single interface

Using the new remote connection function in File Station enables management of files on local, remote, and cloud storage across geographical boundaries and platforms from a single window.

File Station introduces support for remote connections.

File Station remote connection supports six cloud services and three network protocols:

Cloud services

Google Drive™, Dropbox™, Microsoft® OneDrive®, Box, Amazon Cloud Drive™, and Yandex Disk™

Three remote device network protocols:

- 1.CIFS: Supports online streaming and thumbnail display when Microsoft® Networking (SMB/ CIFS) is selected. Allows a single folder to be mounted on your local network or when the NAS connects to a VPN service.
- 2.FTP: Allows every folder to be mounted when using the FTP service for easy access to remote data.
- 3.WebDAV: Allows a single folder to be mounted on local network or over the Internet. WebDAV uses the HTTP protocol over the standard HTTP port, making accessing files via WebDAV similar to downloading files from a webpage.

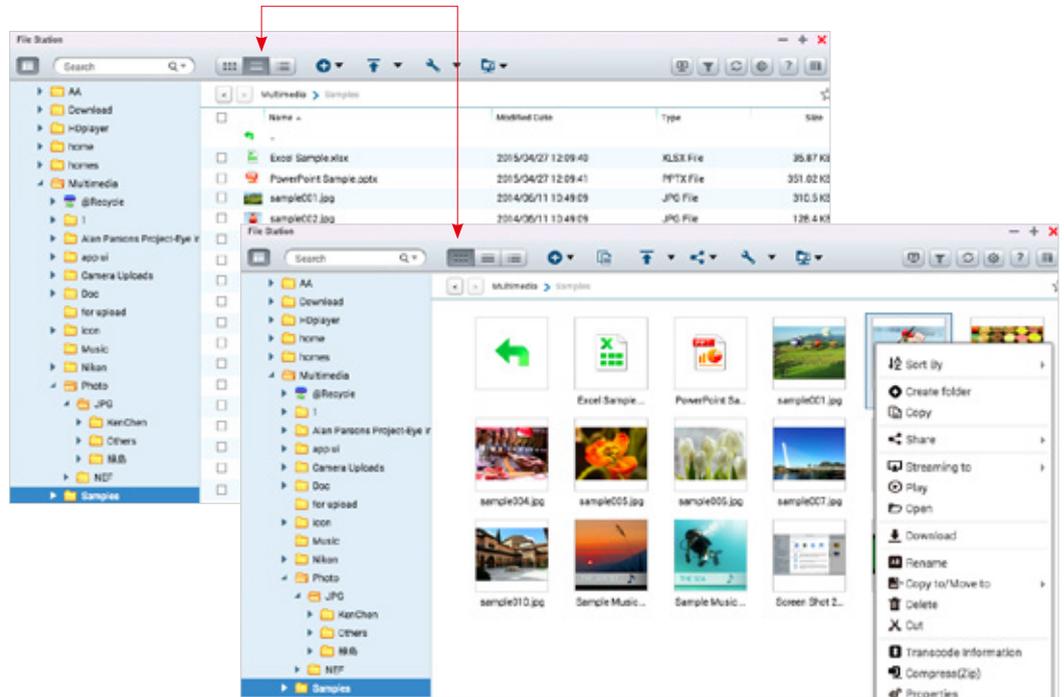

Please install Connect to Cloud Drive from the App Center before connecting to cloud services.

File Station interface

Three browsing modes are available: icon, list, and detailed list.

Folders in tree structure:

Presents the locations of data in a familiar and easy-to-read format.

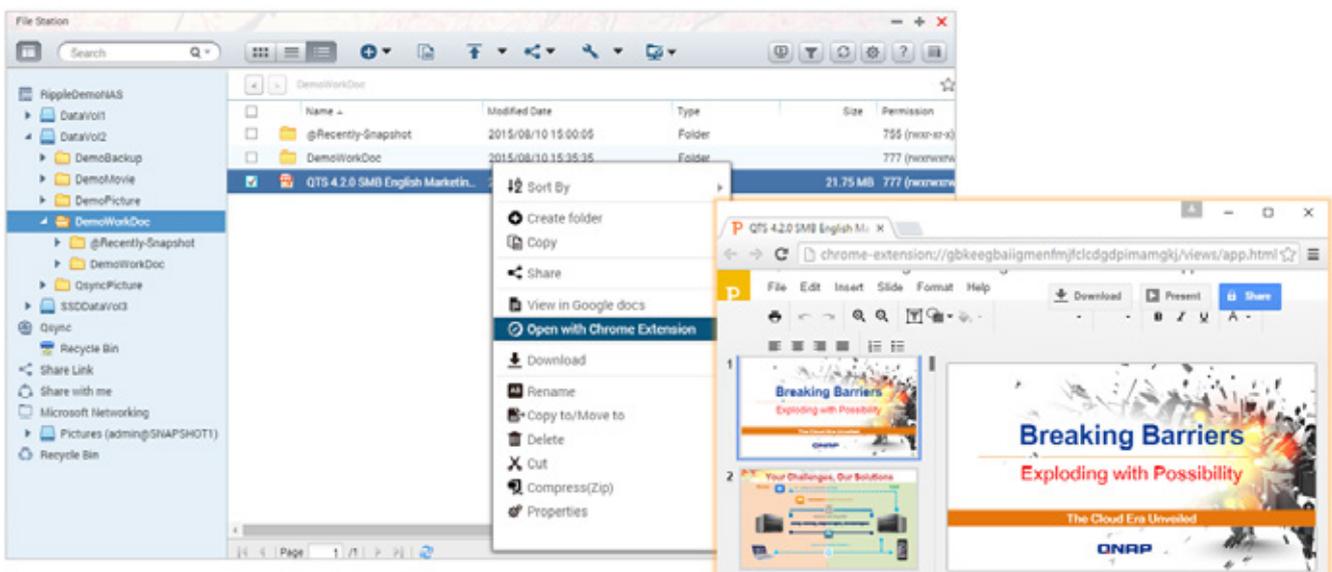

Preview for Microsoft Office® files:

- Preview Microsoft Office® files offline in File Station with the Office Editing for Docs, Sheets & Slides extension installed from Chrome™ Web Store (Chrome™ browser only).

Support for file types: .doc, .docx, .xls, .xlsx, .ppt, and .pptx.

Also supports the online preview of Microsoft Office® files with Office Online and Google Docs™ in the File Station.

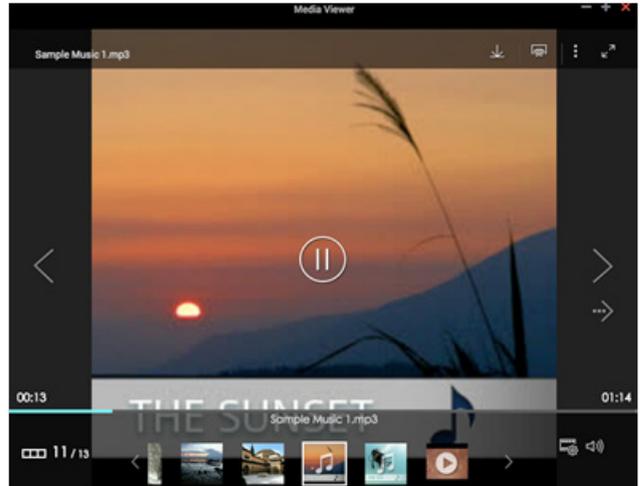

Media Viewer for media streaming and playback

Media Viewer is the built-in multimedia player that supports streaming and playing media files in addition to playing using VLC™ player. It enhances playback quality with improved compatibility without needing to install additional add-ons.

Video

On-the-fly transcoding: Watch a video while it is being converted in real time.*

 On-the-fly transcoding is only available on certain models.

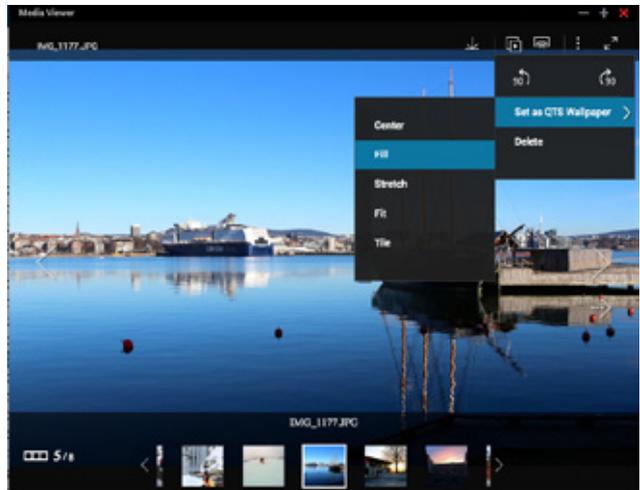

Photo

All new interface with added support for viewing a wider range of picture formats.

Play back photos as a slideshow, or rotate photos while viewing them. Additional, set a photo as the QTS wallpaper directly from the Media Viewer.

Music

Added support for direct playback of a variety of music formats.

Smart zonal streaming

Stream multimedia files to different devices via Apple® TV, DLNA®, or Chromecast™ from File Station. Select the desired file for streaming, click "Network Media Player" from the menu bar and select the device to start playing on it.

 Please install Media Streaming Add-On from App Center first.

Newly added sharing functions

- Share space with a user: System administrators can allocate space to NAS users, and specify a storage quota in File Station.

Send users a notification of the access link via email when sharing space with a user to streamline the process.

- Directly share with other NAS users: Share files directly to selected NAS users rather than setting shared folder permissions.
- CloudLink: enables file sharing from anywhere especially when your network environment does not support port forwarding. Just log in to myQNAPcloud from your NAS, create a share link with CloudLink, and then share the link with others.
- Share download links via email:
 - Users can share links from their own email account.
 - Supports multiple email accounts.
- Share with social networks: You can paste the Share Links on social networks of your choice.
- Create share links only: Create a share link for files or folders and copy & paste it into forums, websites, and instant messengers for others to access it.
- Mutual file sharing: You can easily share several files in a shared folder with friends via a Share Link. By enabling the "Allow file upload to this folder" option, your friends will be able to upload files to your File Station without a user account. Set an expiration time for shared files.

File or folder operations and management

Use File Station to carry out common tasks like uploading, downloading, and managing files easily.

- Streamlined file operations such as rename, copy, move, and delete.
- Compress/Extract multiple files: Choose multiple files in File Station and select "More Actions" > "Compress (Zip)" to compress the files to a Zip file. Alternatively, extract content from a Zip file.
- Instant photo preview: File Station displays thumbnails of photos, album covers, and videos to aid in categorizing and organizing multimedia files.
- File/Folder Property inspection: Quickly inspect a file or folder's detailed properties from its Properties window.
- Auto transcoding: Set a folder as an auto-transcoding folder with its Properties window on the right pane. Your QNAP NAS will automatically convert the videos in this folder to the resolution you have set.
- Media Folders: Use the Properties window to designate a folder as a media folder and specify the type of files (photos, videos, music) for the media scanner to index.
- Easy upload: Move files from your PC/Mac to your QNAP NAS using drag-and-drop in File Station.

Local Snapshot and Snapshot Replica

The most efficient way to protect your data

The QNAP whole volume/LUN Snapshot Agent records the status of files using Copy on Write technology. This helps in recovering files to a previously saved state in case of accidental deletion or modification, and in meeting enterprise requirements of achieving Recovery Point Objectives (RPO) and Recovery Time Objectives (RTO).

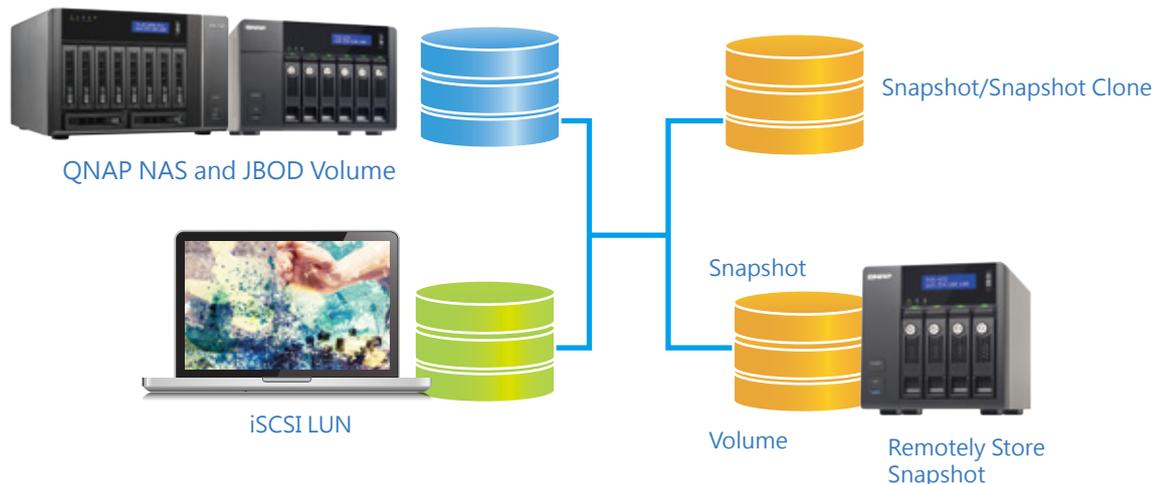

The Snapshot function is only available for certain models and requires a minimum of 4GB RAM.

Benefits of QNAP Snapshot

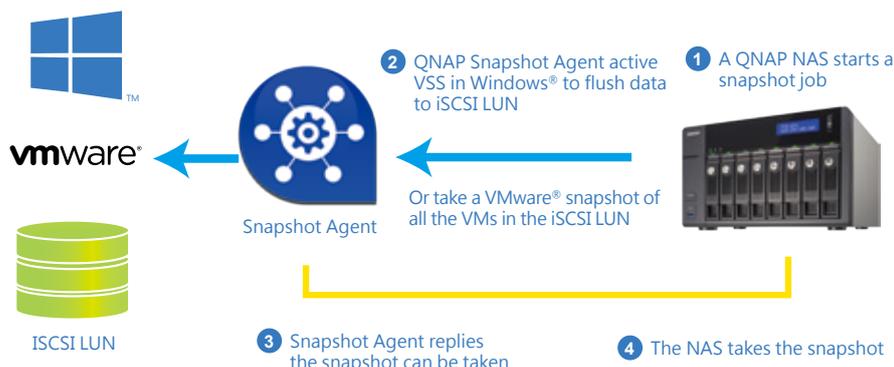

1. High Flexibility

Snapshots can be used with iSCSI LUNs and Volumes in QNAP NAS and Expansion Units to achieve full protection. Additionally, Snapshot Replica enables snapshot transfers to a remote QNAP NAS for backup.

2. Application Consistent Snapshots with QNAP Snapshot Agent

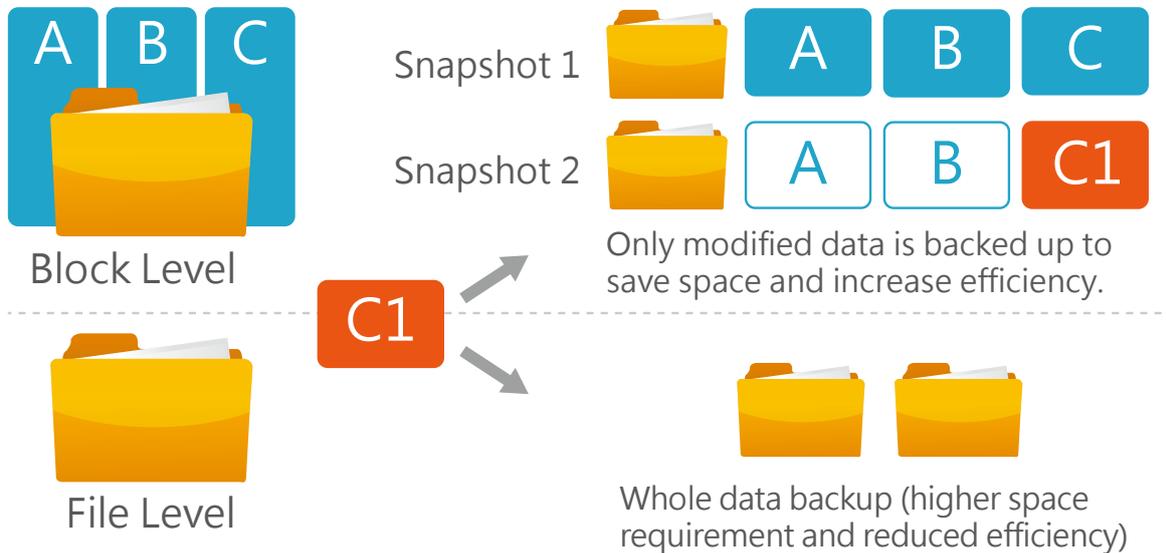

QNAP Snapshot Agent (used for iSCSI LUN) enables connecting a QNAP NAS to remote servers (VMware vCenter™ or Windows Server®) to ensure consistent snapshots. On those remote servers, the running applications (VMware® virtual machines, Hyper-V® virtual machines) will write/flush the data from the memory to the iSCSI LUN prior to the snapshot being taken. The application will then be consistent and include all necessary data. In case of snapshot restoration, no data will be missing.

* The system may temporarily suspend operations when flushing data to an iSCSI LUN

3. Space Usage

The block-based QNAP snapshot technology can assist in saving space and reserve snapshots for future use. QNAP snapshot technology supports up to 256 snapshots for each volume or LUN, up to 1024 snapshots for the whole system.

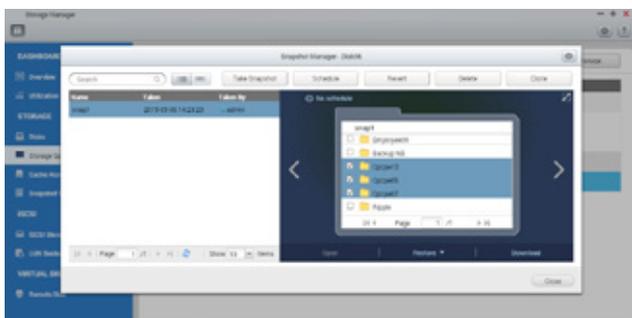

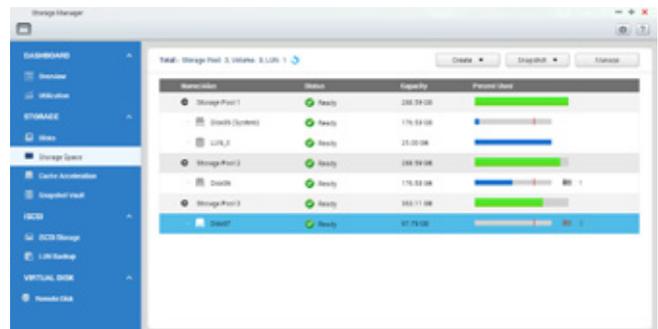

Local Snapshot to provide continuous data protection

File-level recovery

Low-impact, small-sized, and user recoverable snapshots offer many benefits to storage administrators compared to traditional file copies, which are often stored as a single large data file. For instance, choose to recover a file in a folder or the entire folder instantly with a few clicks.

Data visibility

QNAP Snapshot provides tools in Storage Manager to help you find specific files to recover. Easily view files and folders in a snapshot and browse through different snapshots displayed in chronological order. Additionally, file recovery just takes a few clicks, increasing operational efficiency.

The files in a snapshot clone can be freely edited by users.

Clone a snapshot as a volume or LUN for quick file access, eliminating long restore times and reserving sizeable space for storing backups.

Rsync/RTRR integration

The Rsync/RTRR functions in Backup Station automatically detect whether the system supports Snapshots. The Rsync/RTRR functions take snapshots of the volume before starting replication and then back up snapshots to a remote server. This greatly enhances data integrity.

VMware® / Microsoft® VSS integration

QNAP Snapshot also supports virtual machine snapshots on VMware® or deployment with Microsoft® Volume Shadow Copy Service (VSS). Before taking snapshots, the Snapshot Agent notifies VMware® or Microsoft® VSS to stop accessing iSCSI LUNs to ensure data integrity and to reduce system overhead.

Windows Previous Versions Support

Snapshots enable Windows users to restore files directly using the Windows previous versions feature in Windows Explorer, saving time and effort without requiring IT administrators' support.

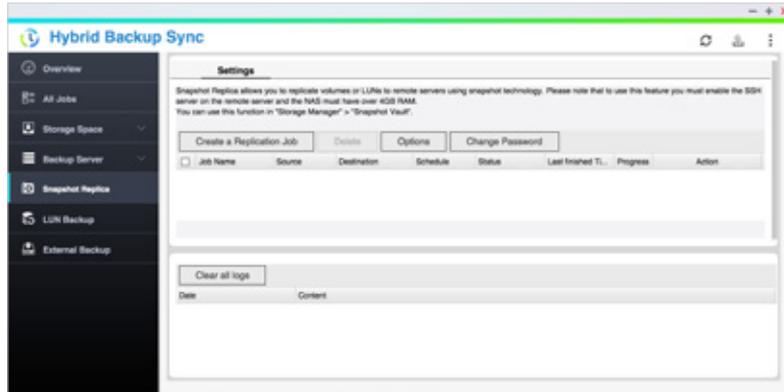

➤ The maximum versions allowed depends on the storage space. QNAP Snapshot Technology supports up to 256 snapshots for each volume or LUN, up to 1024 snapshots.

Remote Snapshot Replica prevents data loss

Snapshot Replica

Remote Snapshot Replica enables replication of Volumes/LUNs between different remote servers using snapshot technology, reducing storage consumption and bandwidth. Either take the snapshot immediately or set up a snapshot schedule. It is considered one of the most comprehensive strategies for data backup.

Snapshot Vault

Snapshot Vault is the backup center for storing and managing every snapshot created remotely from another QNAP NAS. It is also capable of cloning a snapshot (with specified files in a snapshot) as a local volume for data access.

Managing snapshots remotely from another NAS

Use the Clone function to clone (or mount) a snapshot from the Snapshot Vault as a volume or iSCSI LUN on a QNAP NAS. Directly access these files through File Station or Hybrid Backup Sync. Use an iSCSI initiator to connect to a cloned iSCSI LUN from another computer.

Replication Settings

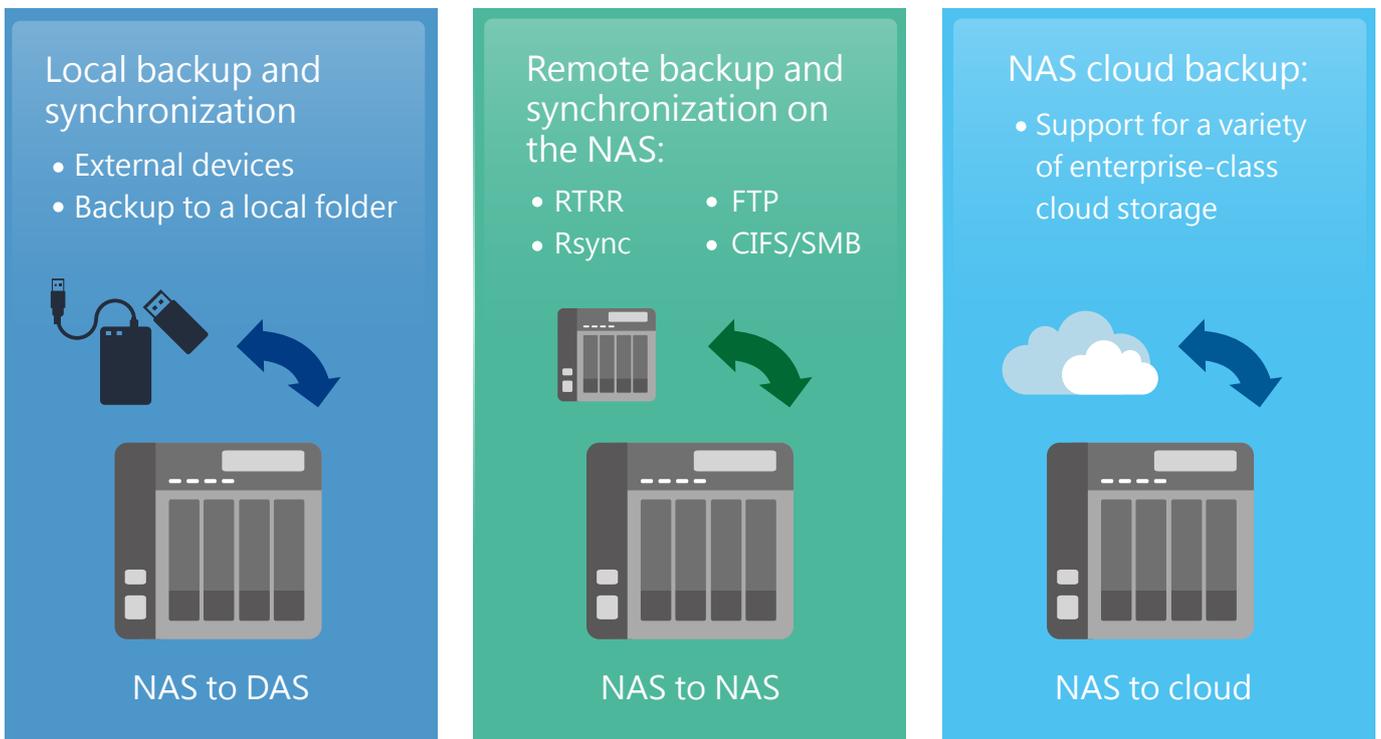

To minimize the risk of data breach, Snapshot Replica provides the option of file encryption. Snapshot Replica also provides file compression and transfer rate adjustment to lower bandwidth consumption.

➤ If your system updates to QTS 4.2 from a previous version, you will need to rebuild the volume in order to use Snapshot. Please go to the QNAP website for more information on data migration and backup.

Comprehensive Backup/Synchronization Hybrid cloud for a consolidated backup solution

Businesses increasingly warehouse huge volumes of data across disparate storage infrastructure, at disparate locations, and across disparate devices. QNAP offer a comprehensive backup and recovery solution to back up all devices from within a LAN and from remote-site NAS / servers, and cloud service.

Local backup and synchronization

Hybrid Backup Sync enables you to back up your data locally without network connections. Back up your data to a folder on the NAS or an attached device for better data safety.

Backup to a local folder

Prevent files from being mistakenly overwritten or accidentally deleted by using the backup to a local folder on your QNAP NAS.

Backup to an external device

Connect a USB device such as a camera, camcorder, or USB storage to the front-panel USB port and press the "Copy" button to instantly back up data to or from external USB devices.

Remote-site backup

Using the Real-Time Remote Replication (RTRR) service on your QNAP NAS to back up data to your NAS is a simple and easy process. Your computer or NAS can be used as the source, destination, or as a relay server during the backup process. Optionally use CIFS/SMB or an FTP service for RTRR in Hybrid Backup Sync.

RTRR with smart version control

RTRR enables saving time-based versions of backup files. Files can be restored to backed-up versions specified by time and date. Smart versioning enables backup versioning hourly, daily, weekly, or monthly to control the number of backups according to your recovery objectives. Alternatively, simple versioning keeps a fixed number of versions for a given period and automatically rotates stored versions.

Remote backup monitoring

Hybrid Backup Sync enables administrators to monitor backup jobs from remote servers. The Incoming List displays the status of backup jobs from other servers using the NAS as a target destination for backups.

Two-way shared folder synchronization

Use the RTRR service to set up real-time or scheduled synchronization of shared folders between two NAS. With two-way synchronization, file backup consistency is improved and is especially helpful in collaboration between departments and branch offices.

Hybrid Backup Sync

Hybrid Backup Sync supports major cloud storage services and synchronization with designated folders. The HybridCloud Sync supports Amazon® Cloud Drive, Google™ Drive, Dropbox™, Microsoft® OneDrive®, Yandex.Disk, Box and more for continuous synchronization between your QNAP NAS and public cloud services.

Microsoft® OneDrive for Business

Microsoft® OneDrive synchronizes files to Microsoft's free online storage space. The commercial counterpart provides online storage for enterprises and users of Office Online.

Amazon Cloud Drive's Unlimited Photo Storage Plan

This service can save photos, videos, and other files.

Google™ Drive for Work

This service enables users to save work to a secured cloud environment enabling access from anywhere at anytime, convenient sharing among colleagues with unlimited storage space.

Microsoft Office® for Dropbox™

This service enables editing of Office files (Word, PowerPoint, and Excel) directly from Dropbox™ online.

Yandex.Disk for data synchronization across different devices

Yandex.Disk is offered by a Russian Internet company. Supported operating systems include Windows, Mac, iOS and Android.

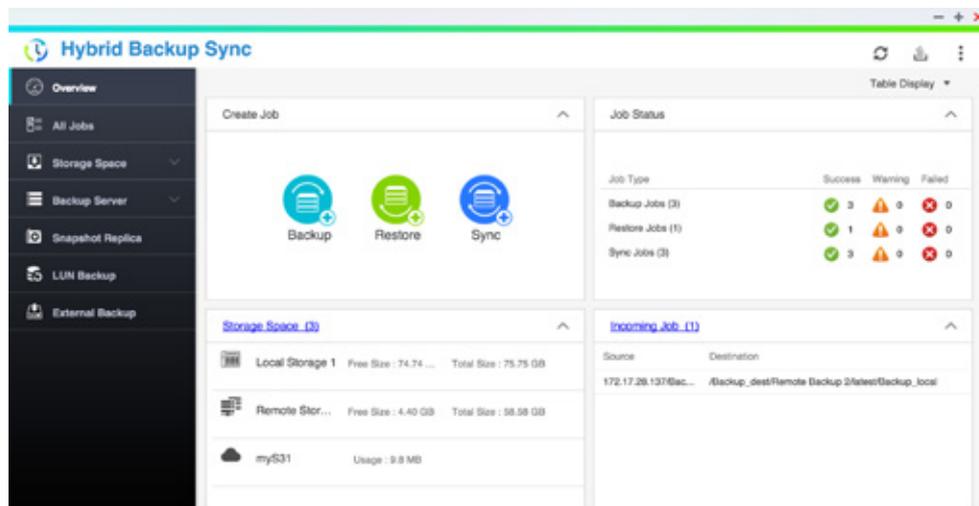

Box offers secure content and online file sharing for businesses

Box provides flexible and secure file management and collaboration for individuals, teams and businesses, enabling secure file sharing and online access to your files.

Centralized file storage and management

Hybrid Backup Sync is a comprehensive backup solution to efficiently manage storage space for all devices on a LAN, between remote NAS, and cloud services. QNAP NAS also supports backup from NAS to cloud storage while recording and encrypting all remote connections to accelerate remote-site or cloud backup jobs.

Cloud backup made simple

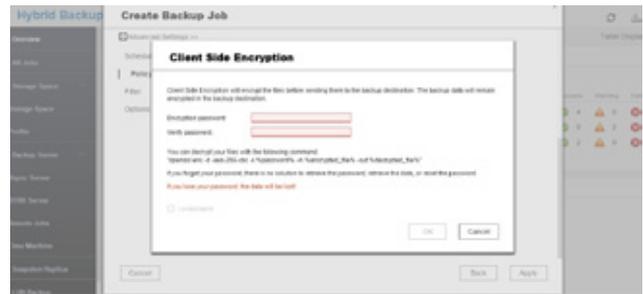

1 Compress

Hybrid Backup Sync supports compressed backups, scheduled file deletion according to users' specifications, and sparse file detection to avoid back up of unnecessary files. Screen files by type, size, and date to ensure only required files are saved on the cloud for greater storage and cost efficiencies.

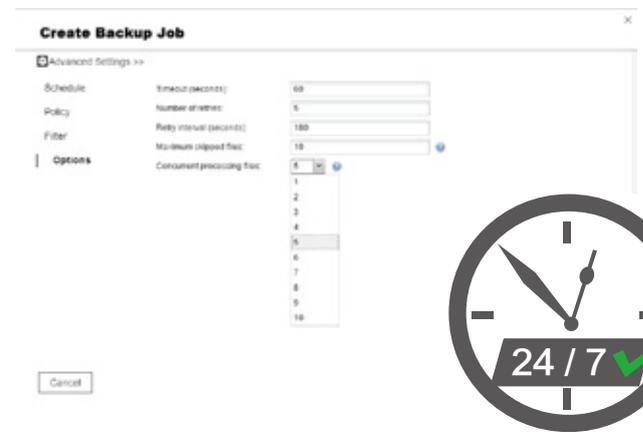

2 Select folder and encrypt

Hybrid Backup Sync features SSL connections and industry-standard AES 256-bit data encryption to protect your data in transmission and at rest in the cloud.

3 Multi-thread transmission

Hybrid Backup Sync supports multi-task processing and multi-threaded data transfers*. This improves file transmission speed by segmenting large files into smaller ones before uploading. Users are able to preview files in the cloud and download individual files instead of the entire folder.

 WebDAV app does not support multi-threaded data transfer.

Cloud Backup

Protecting against potentially disastrous data loss is of paramount importance for all businesses regardless of size. A QNAP NAS is a comprehensive backup and recovery solution to back up files for all devices on a LAN, and also for remote-site NAS and servers. Further, QNAP NAS fully support backup from NAS to public cloud services (including Amazon® S3, Amazon® Glacier, Microsoft® Azure, Google® Cloud Storage*, and others compatible with OpenStack Swift, and WebDAV). Powerful and comprehensive, Hybrid Backup Sync makes backup and recovery simpler for any business's disaster recovery strategy.

Backup from computer to NAS

Windows users can install the free QNAP NetBak Replicator utility to back up files from Windows® to a QNAP NAS. Mac users can use Time Machine to back up files from a Mac. A variety of other backup tools and software are also supported.

NetBak Replicator

QNAP NetBak Replicator is free for anyone with a QNAP NAS. NetBak Replicator helps users back up entire drives, documents, pictures, music, videos, fonts, emails, and more from a Windows® PC to a QNAP NAS easily. Set up real-time backup, scheduled backups, auto-backups, auto-power off after the backup is finished to save energy, filters to exclude files from back up, and email notification when backup is completed with just a few clicks.

Virtualization backup server

QNAP NAS are compatible with VMware® ESX server, Citrix® XenServer, and Microsoft® Hyper-V, and are able to seamlessly integrate into a virtualized environment as an extended storage for data backup.

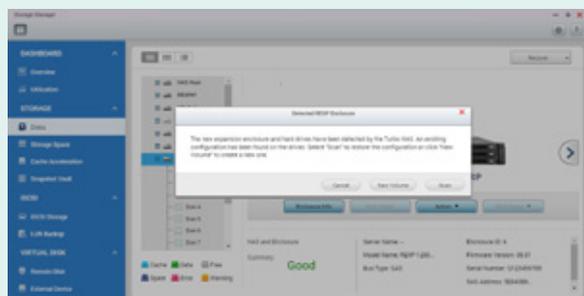

3rd party backup software

QNAP NAS are compatible with various renowned backup software such as Acronis® True Image, Symantec® Backup Exec. Users that have adopted such backup software can immediately back up data from other sources to the NAS.

QJBOD Express for fast data migration without a network

The new QJBOD Express enables rapid back up or migration of massive volumes of data to local or remote sites without using network bandwidth. The following example illustrates a data migration from a headquarters in San Francisco to a branch office in Los Angeles.

San Francisco to Los Angeles: Initial transfer costs for 50TB data		
Method	Time	Bandwidth cost
100Mbps network	About 45 days	50TB
QJBOD Express	In one day	0

1 Back up data to the JBOD unit

Connect a JBOD expansion unit and create an encrypted volume for backup. "Safely Detach" the JBOD expansion unit after the job is completed.

2 Transport

Transport the JBOD expansion unit to a remote site.

3 Finish the backup job

Connect and scan the JBOD expansion unit. Create the final incremental backup job.

San Francisco

Los Angeles

 The remote NAS must support JBOD expansion to use this feature.

Hyperconverged flexibility and performance

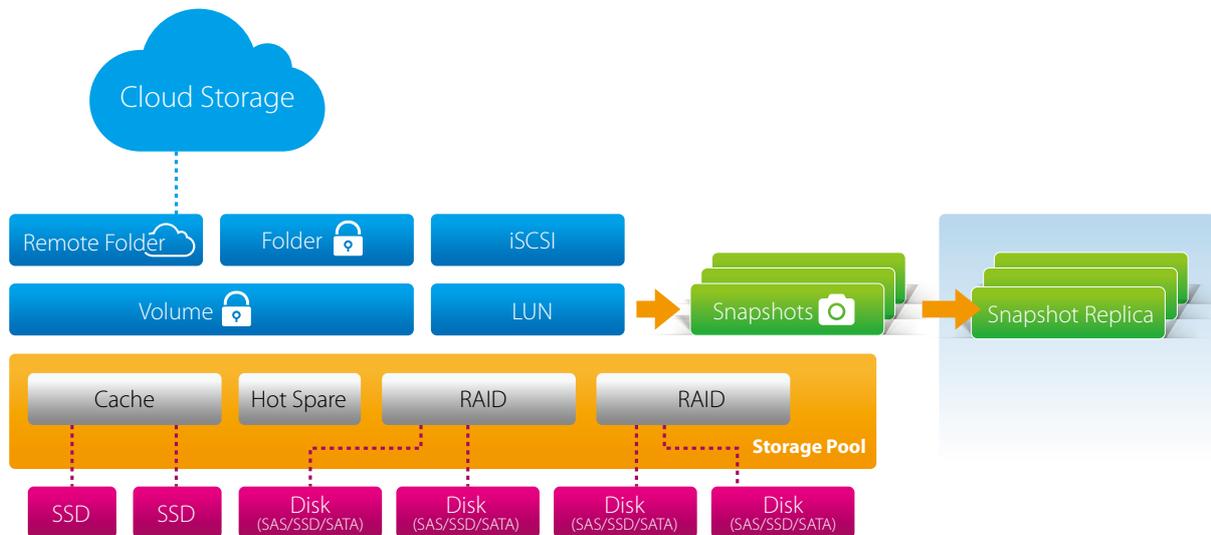

The ultimate in performance with optimal cost efficiency

QNAP aims for continuous innovation and improvement. QNAP is synonymous with advanced hardware capabilities with outstanding software integration enabling users to run multiple services with exceptional storage utilization. This year sees QNAP introduce even more new features (internal speaker, multi-zone smart fan settings, USB QuickAccess) further refining the NAS experience and embracing a wider range of use cases across all sectors of the industry. Take a look at the improvements we've made with QTS 4.2.2 and redefine your QNAP NAS.

Storage Manager Unified storage management

The QTS Storage Manager neatly presents tools and options for managing system storage with an intuitive graphical interface. From reviewing the system storage allocation in the Dashboard, to managing volumes, Storage Pools, disks, and iSCSI storage, or even the new Snapshot function, the Storage Manager provides a centralized place to simplify hard drive management and to maximize storage usage.

Dashboard

The QTS Storage Manager dashboard provides an intuitive and proven interface for IT administrators to engage with and manage storage allocations. QTS 4.2.2 builds on the proven pedigree of QNAP's robust, secure, and flexible data management options for NAS. This next generation, enterprise grade volume management tool set offers powerful features such as deduplication, inline compression, storage pooling over multiple RAID groups, thin-provisioned volumes with space reclamation, and online capacity expansion.

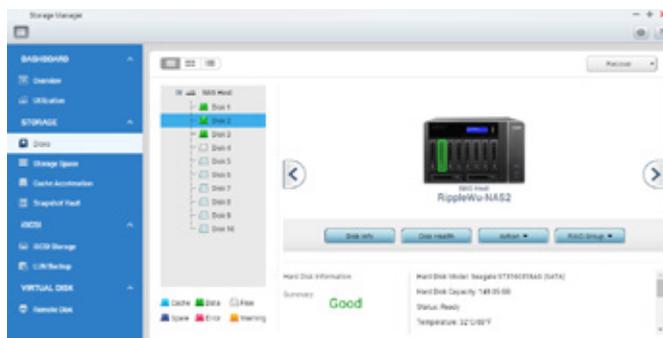

Shared folder	Used Size	Storage Pool	Volume	Capacity	Free Size	Volume Status
Backup Hub	87.87 GB	2	Drive2	1.75 TB	88 GB	Ready
Download	93.58 TB	1	Drive2	1.75 TB	103 GB	Ready
Home	264.02 TB	1	Drive2	1.75 TB	103 GB	Ready
Multimedia	4.57 TB	1	Drive2	1.75 TB	103 GB	Ready

In addition to Storage Manager, IT administrators can also check volume status of shared folders with File Station.

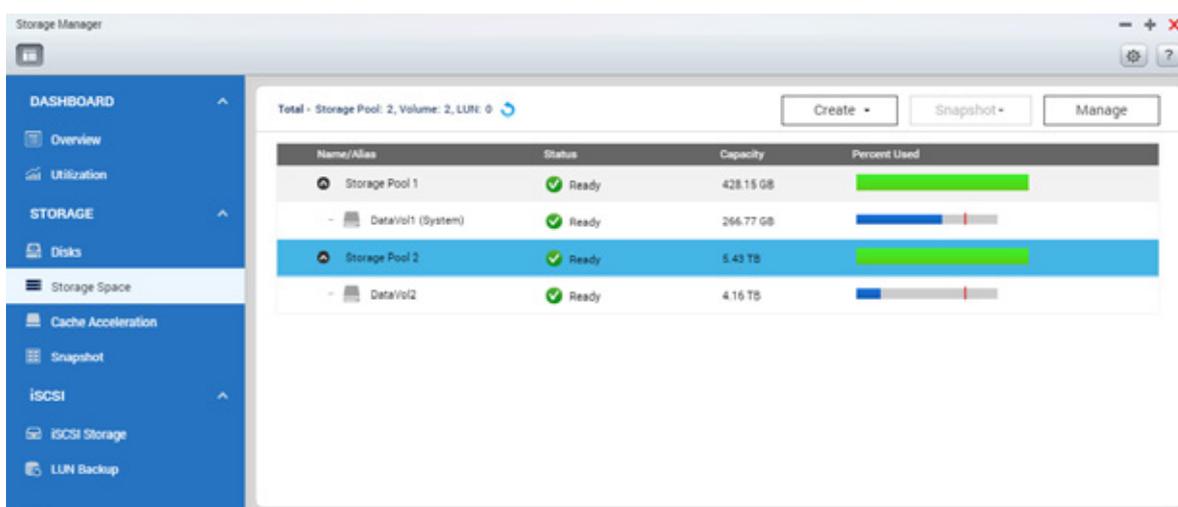

Storage management

Administrators are able to monitor HDD allocation status for RAID groups in addition to individual HDD information. This ensures that there are no idle HDDs, maximizing resource utilization. Administrators are able to aggregate multiple RAID groups into a single storage pool to treat and protect the pool as a whole, enabling better protection against multiple disk failures for large-capacity environments.

Volume

QTS 4.2.2 supports the creation of multiple volumes within a Storage Pool. View all available storage pools, volumes, iSCSI LUNs, and multiple RAID groups from a single point. This enables the expansion or removal of current pools and volumes, setting of threshold values for capacity consumption alerts, and RAID group management. Data volumes and LUNs can also be extended without interrupting services.

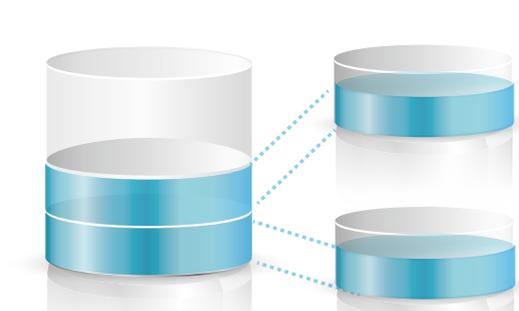

Thin provisioning

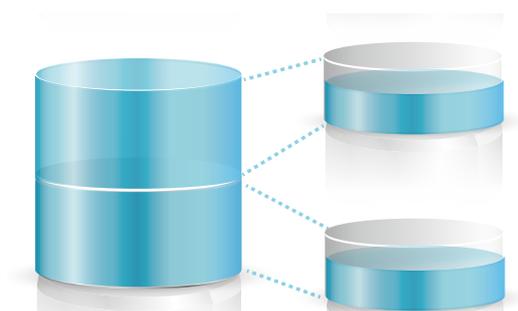

Over-allocation enables a server to view more storage capacity than has been allocated in a storage pool. Further, the physical storage capacity is used only when files are written by the application, improving utilization rates.

Thick provisioning

Physical storage capacity is dedicated during the initial allocation of the storage volume.

Dynamically and efficiently, use storage spaces with incremental allocation.

Specifically define all storage space that cannot be used by other volumes or LUNs.

iSCSI LUN

QTS 4.2.2 supports two types of iSCSI LUNs for efficient storage utilization: block-level, and file-level iSCSI LUNs. QNAP NAS also support multiple types of configurations for server connections:

- Single LUN or multiple LUNs per iSCSI target.
- Multiple iSCSI targets for a single LUN, for clustered environments.

Block-Level iSCSI LUN: Deploy block-level iSCSI LUN as volumes to reduce overhead and improve overall read/write performance.

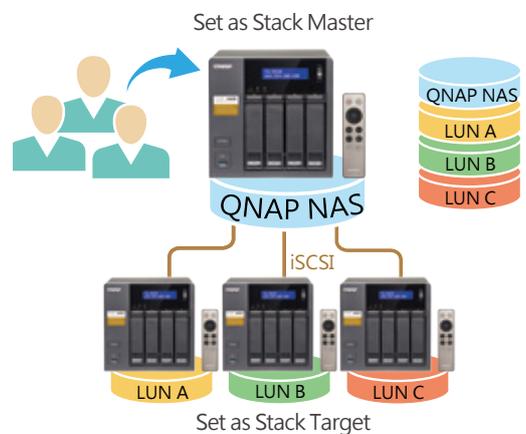

File-Level iSCSI LUN: File-level iSCSI LUNs can be used to create a disk image for an iSCSI LUN where storage space is a premium.

 Both block-level and file-level iSCSI LUNs support thin provisioning, space reclamation, and online capacity expansion. QNAP recommends using block-level iSCSI LUNs unless there is a limitation on space usage.

Virtual Disk Drives increase expansion flexibility

Virtual disks provide enable administrators to expand storage flexibly. By using an iSCSI initiator to connect to an iSCSI target on a QNAP NAS, administrators are able to create a virtual disk on a local server. The QNAP NAS can act as a stack master to connect up to 8 virtual disks or stack targets, aggregating storage space from multiple NAS. NAS users then only need to connect to a single target to access the space from all of the network storage devices.

 Every virtual disk on the local server will be seen as a single drive of arrayed disks.

External storage device support

Administrators can connect external storage devices to a QNAP NAS to back up shared folders and critical data using eSATA, USB, or Thunderbolt™ ports. Multiple backup methods, email notifications, and scheduled backup options while supporting many disk formats such as EXT3, EXT4, FAT32, HFS+, NTFS, etc., enable data migrateion to a Mac or Windows PC. Administrators can set up replication jobs to back up data to designated volumes on external devices. Even when multiple external storage devices are designated as destinations for replication jobs, you can rest assured that the scheduled jobs will run smoothly no matter how many times the external devices have been connected or disconnected.

QNAP high-performance unified and tiered storage solutions

Enterprise data continues to grow exponentially and with a greater diversity in data types and importance. It is increasingly imperative to offer a secure and efficient storage solution that can process this enormous amount of data while minimizing the total cost of ownership.

Establishing a tiered storage system based on efficiency and capacity greatly aids in improving overall processing efficiency. Enterprises can classify data accordingly by sharing folders with a file-based storage system and processing files that require more demanding data throughput with a block-based storage system to accommodate different usage models.

The QNAP business series NAS flexibly configures different tiers to different hard drive types within a single unit according to different data usage needs, delivering the best unified and tiered storage solution.

Tiered storage and SSD caching for better efficiency

Enterprises require storage architectures that enable rapid access to dynamically scalable and virtualized IT resources. Classifying data into Hot and Cold Data (frequent vs. rarely used) and utilizing different storage media according to requirements in a tiered storage architecture can help achieve this goal both efficiently, and cost effectively. Businesses increasingly deploy SSD to improve the workflow of random IOPS-demanding applications such as databases and virtualization, increasing both performance and ROI.

	Tier 1	Tier 2
Storage Type	SSD	SATA HDD
Characteristic	Balance of efficiency, capacity, and usability	Ubiquitous, convenient, and inexpensive
Usage Scenario	OLTP (Online transaction processing) and ERP databases	Archiving, online and offline backup storage, disaster recovery
Usage Example	Data, audio, email, database table, video creation, and demanding workflow operations in a virtualized environment	Low cost and energy saving
Typical Use	A wide variety of users and environments where performance is crucial	Typical for data at rest
Criterion	Weighs more on IOPS, throughput and resiliency	Weighs more on data volume and low cost per TB

The following is a comprehensive comparison of general tiered storage devices:

Hard Drive	Solid State Drive (SSD)	SATA Hard Drive
Features	Low power consumption, no noise, anti-vibration, low heat, fast speed	Large capacity, lower reliability, and performance
Price	Expensive	Inexpensive
Capacity	80GB - 2TB	500GB - 8TB
Performance	Very high	Moderate-low
Interface	SATA (Single Port) 6 Gb/s	SATA (Single Port) 6 Gb/s
RPM	N/A	7200-RPM
External Continuous Transfer Performance	400-500 MB/s	100-170 MB/s
Average Response Time (Milliseconds)	< 1ms	R:9.5/W:8.5
Input/Output Operations Per Second (IOPS)	120,000/40,000	Less than 100
Unrecoverable bit read error	1 LBA per 10E16	1 LBA per 10E14
Mean Time Between Failures (MTBF, hours)	Variable	0.8 million

SSD cache acceleration

The QNAP NAS business series support using SSDs for read/write or read-only caching. Random IOPS performance can be dramatically improved by up to 10 times and I/O delay reduced by three times. It is an excellent solution for improving the overall workflow of random IOPS-demanding applications. SSD caching supports configuration of RAID 1 with two SSDs and RAID 10 with 4 SSDs or more.

Qtier™ Technology QNAP's auto-tiering technology

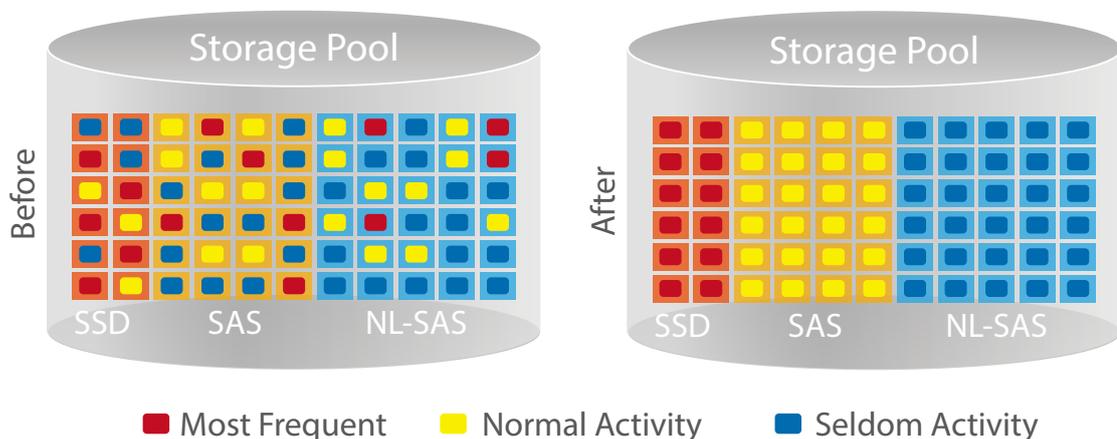

Qtier™, is a multi-tier storage management system. Qtier™ automatically moves the most active data to the high-performance drives while less active data is migrated to high-capacity drives. This alleviates the burden on administrators by supporting tasks of performance pre-estimation, layout design, and relocation of data according to performance and budgets.

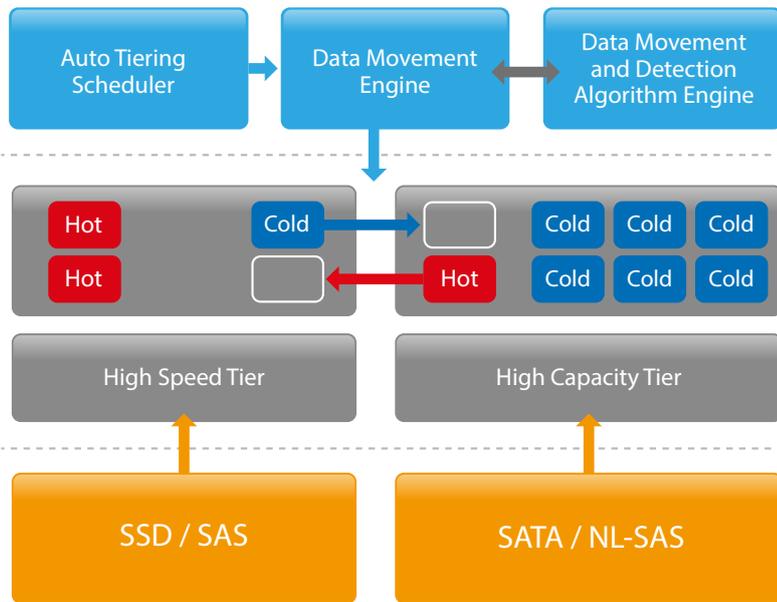

This function is available only on the TVS-ECx80U-SAS-RP Series and TS-ECx80U Series.

Please enable Auto-tiering when creating a Storage Pool.

Data migration based on Transaction-based B-tree Update

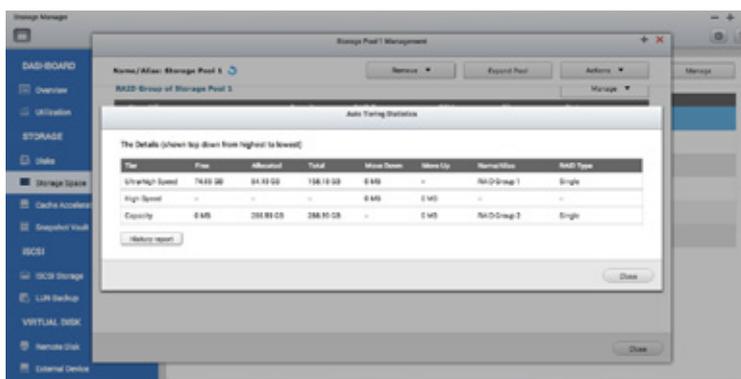

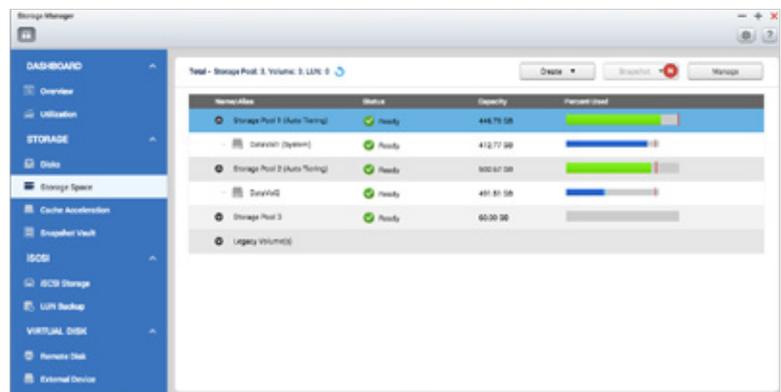

Based on the results of B-tree calculations, the NAS will automatically move data blocks with higher weights to higher tiers (e.g. moving data blocks from the HDD RAID Group to the SSD RAID Group). Data migration and metadata updating does not interfere with normal I/O meaning transaction-based B-tree updating does not introduce data integrity problems.

Administrators are able to get the statistics of all data waiting to be processed as well as finishing processed in this phase. If administrators need to perform tasks or there are bandwidth requirements for external connections, they are able to delay data migration in this phase. Further, assigning weights can assist bandwidth allocation or alleviate congestion between external I/O and internal data migration.

The goal of the auto-tiering function is to optimize the use of the storage infrastructure by simultaneously balancing storage utilization and performance:

- Move frequently used data onto fast disks for high-availability or high I/O cache throughput
- Move less frequently used data onto low-cost, high-capacity disks for better cost efficiency

To achieve the required level of performance and cost benefits, data is categorized based on access frequency. Service levels such as response times or runtime must be measured and evaluated in advance to decide which data must be stored at a given time in a certain tier.

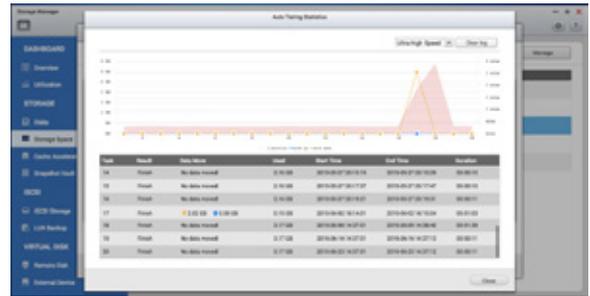

3 levels of tiered storage

- Tier 1 (Ultra-high Speed): SSD drives
- Tier 2 (High Speed): SAS drives
- Tier 3 (High Capacity): SATA or NL-SAS

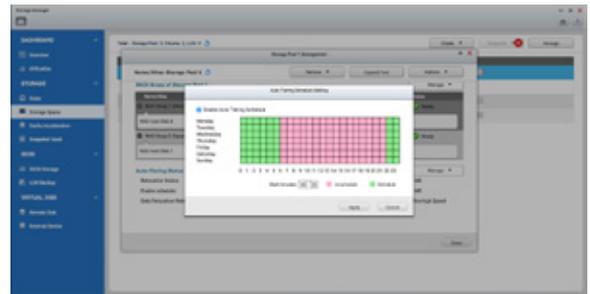

Detailed and visualized statistics for performance analysis

Historical data assists users in performance tuning and storage provisioning, enabling accurate adjustment of auto-tiering policies.

User-defined policies for better auto-tiering efficiency

Policy defined auto-tiering enables dynamic reallocation of data corresponding to the performance requirements of the data or applications in addition to scheduling and prioritization of data migration.

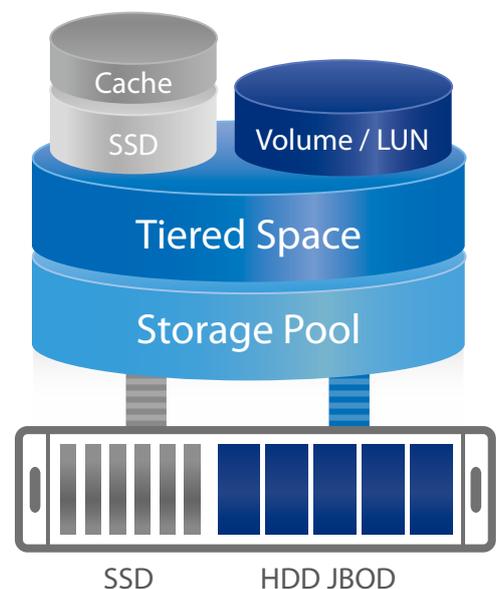

The following is a comprehensive comparison of storage technologies:

	Qtier™	Full SSD	SSD Cache
Costs	\$	\$\$	\$
Storage space	Large	Small	Large
Available SSD space	Extends as needed	Extends as needed	Limited by available memory
Data migration method	Scheduled	No	Automatic
Data migration mechanism	Moves data according to access frequency	All data is in SSD storage	Replicates frequently accessed data to SSD storage
Application scenarios	Typically used for predictable I/O workloads such as file/web/e-mail servers and application virtualization or video editing	Typically used for applications requiring fast/intensive I/O such as databases or virtualized environments	Typically used in a highly frequent data access environment such as virtualized applications or high-resolution video or audio processing

Qtier™ with SSD Cache for around-the-clock acceleration

Qtier™ fully supports concurrent tiering and SSD caching. In this mode, Qtier™ constantly monitors I/O activity and keeps active data that requires small, mostly random, read and write operations in an SSD Read-only or Read-write cache. Other data is kept in the tiered storage and automatically moved between the appropriate tiers. QNAP unified and tiered storage is an intelligent, automated storage system for managing strategic data placement to help optimize performance and cost requirements in multi-tier configurations.

Qtier™ Technology is a convenient, economical, and insightful way to store and balance your active (hot) and archived (cold) data. The intelligent Auto-tiering feature allows you to have your frequently-accessed data on high-speed SSD in the NAS for quick access and high performance. At the same time, you still have access to your archived and seldom-used data on the NAS SAS and SATA drives. This provides the versatility of extreme performance, a large storage capacity, and a lower cost per gigabyte to store and balance your data.

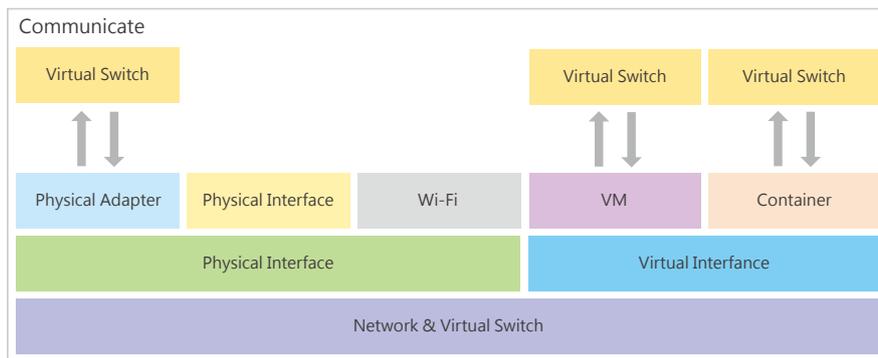

Network and Virtual Switch

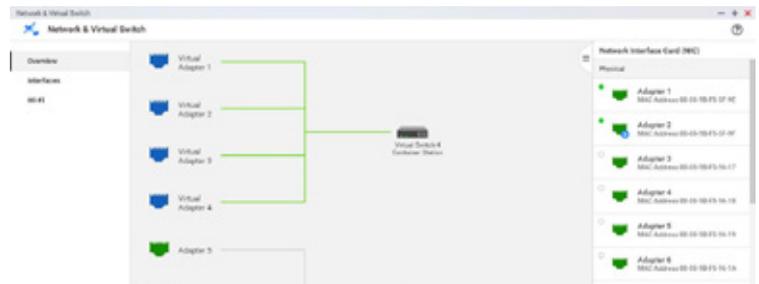

A complete overview of your network configuration

The all-new Network & Virtual Switch integrates the powerful QTS network management functionality, i.e., TCP/IP, Wi-Fi, IPv6, and Thunderbolt™ management into an overview page incorporating software-designed virtual switch technology. This logically centralized control provides complete visibility across your network enabling you to responsively provision and intelligently steer traffic to achieve the optimized network configuration.

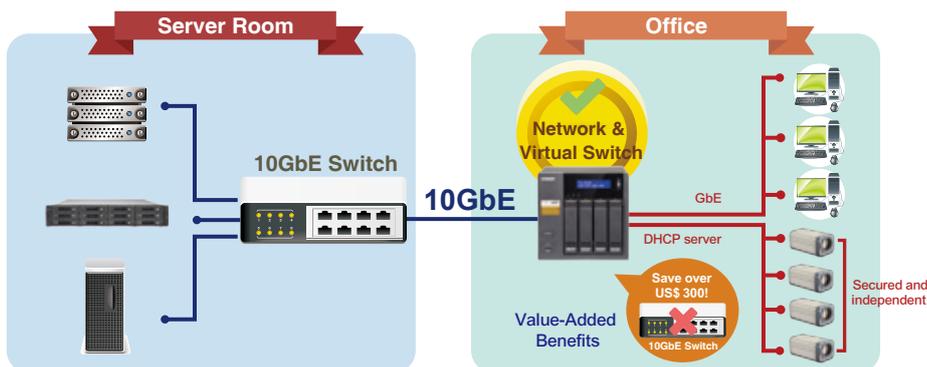

The all-new Network Manager Overview page makes complicated networking easier

The powerful overview visualization provides you with the most current connection status regardless of the complexity of your network infrastructure. Use the all-new QTS Network & Virtual Switch Overview page to quickly and easily analyse your entire network for rapid troubleshooting. View realtime traffic flows and identify bottlenecks to ensure your mission critical applications have the bandwidth they require. This level of oversight helps reduce both capital expenditure (CapEx) for adapters, switches and cables, and operational expenditure (OpEx) for IT administration.

Decouple hardware and software networking for lower capex, opex, and increased ROI.

Virtual Switches enable greater flexibility and agility in deployment configurations with enhanced centralized management control. Deploy Virtual Switches to easily bridge Gigabit and 10 Gigabit networks removing the need for expenditure on 1/10Gbps Ethernet switches. Simply connect 10GbE network devices and your NAS will seamlessly bridge your 1GbE and 10GbE networks to unleash super-low latency bandwidth across your infrastructure. Use a virtual switch to build an isolated LAN environment with the built-in DHCP server for accessing IP camera surveillance footage with better data security.

This function is available for x86-based NAS models (TS-269H, TS-269L, TS-569 Pro, and TS-1269U-RP are not supported).

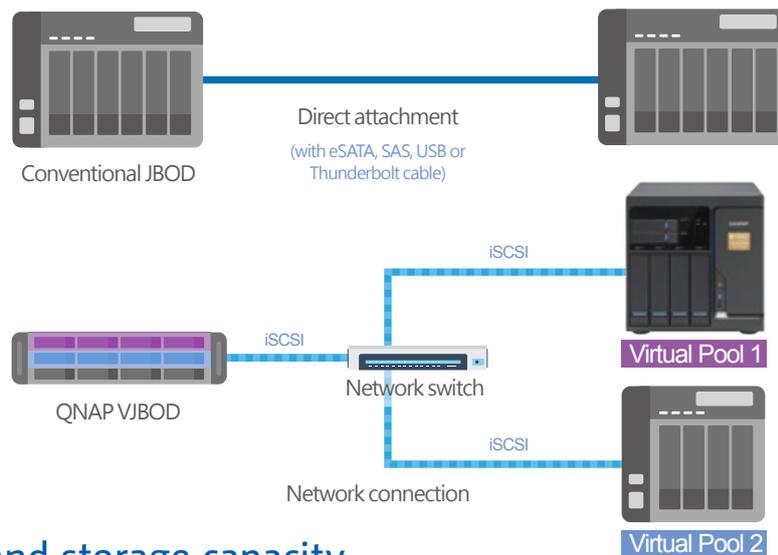

VJBOD

best capacity utilization among multiple NAS

Use QNAP VJBOD (Virtual JBOD) to utilize and optimize storage infrastructure resources of several QNAP NAS. VJBOD enables you to create virtual storage pools and volumes on your local NAS. This enables optimal storage utilization of multiple QNAP NAS in your storage infrastructure.

On-demand, instant storage capacity allocation

VJBOD is the QNAP implementation of software-defined storage and brings several benefits and practicalities to small and medium-sized business storage architecture. Software-defined storage enables a high degree flexibility and expansion-on-demand capability. Use QNAP Virtual JBOD (VJBOD) to instantly allocate the storage space from another QNAP NAS as an iSCSI LUN. Use the iSCSI LUN to create storage pools, take snapshots, make a clone from snapshots or index multimedia files into the media library on the local NAS.

Remotely expand storage capacity

Enable the native iSCSI service and storage pool creation to allocate the capacity on it as Virtual JBOD. For example, a TVS-882 connected with four UX-800P expansion units can have approximately 300TB raw storage capacity in total (calculated using 8TB HDDs). Further, the capacity can be easily expanded up to 1PB using QNAP VJBOD.

* The support for iSCSI service and storage pool is required for the remote QNAP NAS. The maximum number of NAS for VJBOD configuration is 8.
**QNAP VJBOD is supported on the following models: X89, X82, X80, X79, X71, X70, X63, X53, IS-400. QTS firmware 4.2.2 or later is required.

Intuitive and easy-to-use interface

No complicated commands or procedures are needed to set up Virtual JBOD. Take two connected QNAP NAS, click "Virtual JBOD" in Storage Manager in QTS. Then follow the "Create Virtual Disk" wizard to search for the second NAS, check the available capacity, and add the space as a virtual disk on your local drive. Then freely utilize and manage this virtual disk in Storage Manager, including checking the status and network location of the virtual disk*. This saves time from having to log in to a remote NAS.

High-performance VJBOD storage with super-fast 40GbE and 10GbE

VJBOD offers greater online capacity expansion flexibility over traditional JBOD expansion. Build a high-performance VJBOD SAN with high-speed 10GbE or 40GbE networking based on the highly converged integration of hardware and software technologies from QNAP. For data centers that demand high transmission, full support for 10GbE or 40GbE network adapters and switches drive data transmission performance to be close to that of local disk. Deploying Windows Offloaded Data Transfer (ODX) on Windows Server to directly transfer data within or between virtual disks and compatible expansion units, bypassing the host computer brings further performance benefits.* Offloading file transfer to the NAS minimizes latencies, maximizes array throughput, and reduces resource usage such as CPU and network consumption on the host computer.

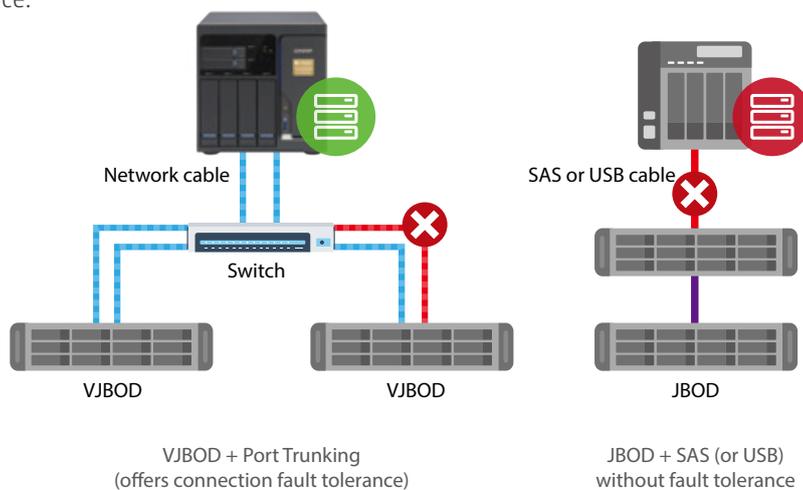

> With Windows Offloaded Data Transfer (ODX), the NAS internally performs the copy or move within or between virtual disks on Windows Server instead of routing the data through the host.

	VJBOD	JBOD
Connection Interface	Ethernet (1GbE, 10GbE, or 40GbE)	USB 3.0, SAS 6G/12G
Max. Number of Connected Devices	8 virtual disks (multiple disks can be added from the same remote NAS)	Depends on the NAS model (1~8 expansion units)
Connection Method	Network	Single connection or daisy-chained
Connection Redundancy	Supports port trunking	Not supported
Application Scenario	Multiple QNAP NAS units offering the flexibility in storage utilization while maintaining the highest availability	It can be used to expand local storage pools on a single QNAP NAS unit.

> VJBOD cannot be used to expand local storage pools.

Increased reliability of VJBOD with redundant network architecture

Online capacity expansion over a network does not cause an associated instability of storage space utilization. QNAP NAS equipped with two or more Ethernet ports support port trunking (link aggregation with multiple LAN ports). Port trunking increases the bandwidth of your NAS and provides fail-safe traffic to maintain connectivity in the case of a connection failure. Further, with port trunking, network traffic will automatically achieve load balancing for each connected device.

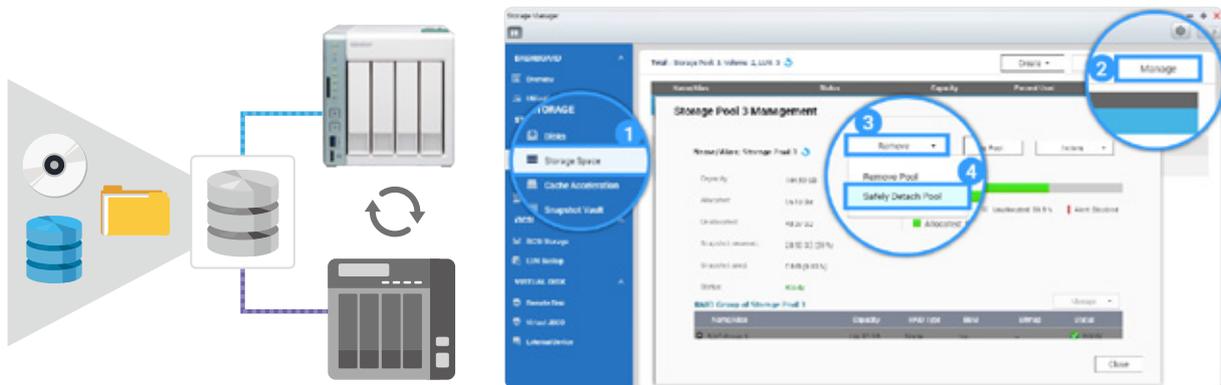

Automatic VJBOD storage recovery after auto-reconnection

In addition to Missing Mode protection of locally attached JBOD expansions, VJBOD employs an advanced mechanism for disconnection prevention. If the remote NAS experiences a power outage, disconnection, or change in IP address, you will get warnings via event notifications in QTS. Further, the NAS will automatically try to reconnect and recover the VJBOD storage without user intervention.

Instant migration of VJBOD without physically plugging/unplugging

Typically, to migrate an expansion unit requires manually unplugging the device, transporting it to the destination and plugging it in. However, VJBOD enables connection using iSCSI and can be safely detached as a storage pool in Storage Manager. Virtual disks that have been detached from your NAS can immediately be used again on other NAS making the data and application on the virtual disks accessible to be shared among different QNAP NAS.

➤ Virtual disks that have been connected via iSCSI targets to be used in Virtual JBOD should be excluded from other iSCSI initiator connections.

Monitor device connection status with Virtual JBOD Overview

QNAP NAS provide management and monitoring functions enabling administrators to obtain the most up-to-date information on connected VJBOD. Check remote LUN information from Storage Manager (iSCSI Storage page) on a remote NAS. Obtain VJBOD connection statuses or get instant notifications from System Logs of remote NAS. Event logging and notifications enable further analysis of connection status and VJBOD activities to enhance the reliability and availability of VJBOD storage.

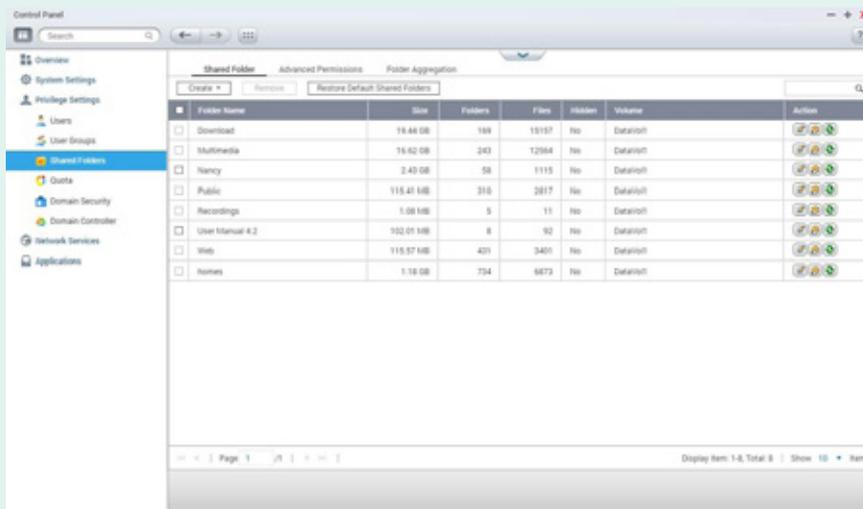

Disk Name	Status	Total Size	Host Storage Pool	Host Volume/LUN	Remote NAS	Remote Storage Pool	Remote Disk Configuration	Remote Target/LUN	OS/FS
VJBOD 1	Ready	500.00 GB	Warning Storage Pool 2 490.00 GB	Catara10	Ripple811X (10.8.10.88)	Ready Storage Pool 1 (308.36 GB Unal...	RAID Group 1 RAID 1 2 Disk(s)	Remote_VJBOD...	Disabled
VJBOD 2	Ready	3.42 TB	-	-	ip1204-04.com.qnap.sys.1.2021.local.remote@jod01.f1100e	Ready Storage Pool 1 (1.45 TB Unal...	RAID Group 1 RAID 1 2 Disk(s)	Remote_VJBOD...	Disabled
VJBOD 3	Ready	500.00 GB	Ready Storage Pool 4 581.00 GB	Catara10	Ripple811X (10.8.10.88)	Ready Storage Pool 1 (308.36 GB Unal...	RAID Group 1 RAID 1 2 Disk(s)	Remote_VJBOD...	Disabled
VJBOD 4	Ready	200.00 GB	Ready Storage Pool 4 581.00 GB	Catara10	Ripple811X (10.8.10.88)	Ready Storage Pool 1 (308.36 GB Unal...	RAID Group 1 RAID 1 2 Disk(s)	Remote_VJBOD...	Disabled

➤ The Q'center app offers convenient tools for you to monitor the status of remote NAS.

Allocate user accounts and access privileges flexibly

Home Folder

Enable the Home Folder function to automatically create personal folders for authenticated users. The home folder is created the first time users log into the NAS. IT administrators save time as they no longer need to create folders for NAS and domain users with appropriate permissions. All home folders will be listed in the "homes" folder in File Station, enabling easy back ups for administrators.

Windows ACL

Windows ACL enables IT administrators to configure file and folder permissions for local and domain users on a NAS. Enable this feature and configure basic and advanced permissions from Windows Explorer. These permissions grant or deny access to files and folders and will be aligned with the shared folder permissions on the NAS. Additionally, apply permission settings to Samba, FTP, AFP file sharing, and File Station by enabling "Advanced Folder Permissions".

Reduce administrative burden with centralized authentication

The Lightweight Directory Access Protocol (LDAP) and Windows Active Directory (AD) are enterprise-level tools enabling IT administrators to connect to, search, and centrally manage network resources. QNAP NAS support both services. Administrators are able to centrally create and manage user/groups in lieu of maintaining separate user account information on each NAS. Domain users can use credentials from either service to access network resources (including the NAS) without remembering multiple account credentials. This greatly reduces the burden on IT administrators and increases overall user productivity. In addition to joining your NAS to an Active Directory Domain, your NAS is able to act as an LDAP server. Other QNAP NAS and LDAP clients (e.g. Mac and Linux PCs) bind to the server joining the directory service enabling management of LDAP user/group access privileges to NAS eliminating the need to acquire and maintain a dedicated LDAP server.

QuickAccess – The best partner for photographers

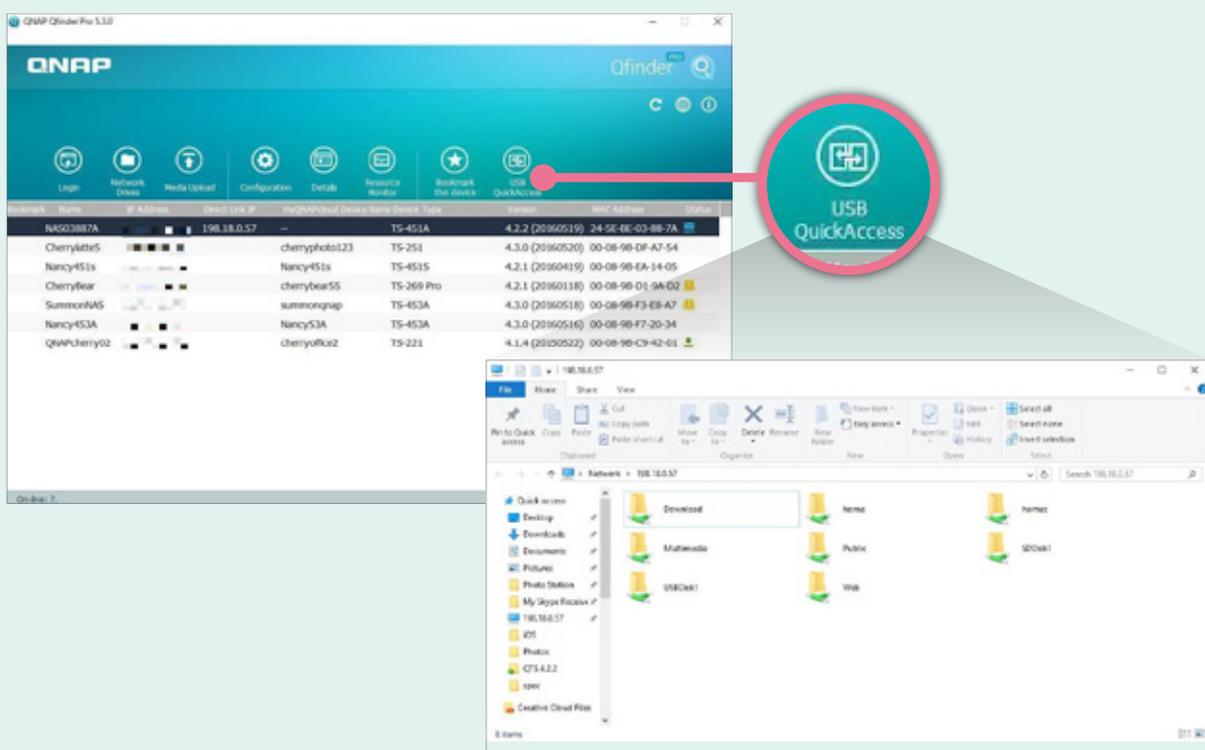

Small office and Home users often use direct attached USB storage believing that NAS is difficult to set up use. QNAP is pleased to introduce a new NAS Quick Access port enabling users to immediately set up and start file transfers through a USB connection, making the NAS even more convenient and easy to use. Moreover, advanced login features can protect private files from being accessed by unauthorized users to provide the utmost connection convenience while maintaining security.

USB super-fast access without network connectivity

Use the optional USB 3.0 A (male) – Micro B (male) or USB 2.0 Micro USB cable to connect to your PC/Mac* and the front-panel Quick Access port. Next, install and run QNAP Qfinder Pro. Qfinder Pro enables you to find and log into the NAS as easily as plug-and-play. After installation, use your File Explorer to transfer files. When the Quick Access port is connected to your computer, your NAS will be automatically assigned an IP address enabling advanced file sharing protocols such as CIFS, NFS, AFP and FTP.

1. The QuickAccess connection is currently only supported by the TS-x51A series.
2. The QuickAccess connection supports the following operating systems: Windows 8.1/10 and Mac OS X 10.8 (or newer). Other operating systems require additional drivers. Qfinder Pro can be downloaded from <http://www.qnap.com/qfinderpro>.
3. For the highest possible speed, connect the NAS to a USB 3.0 port on your computer using a USB 3.0 cable.

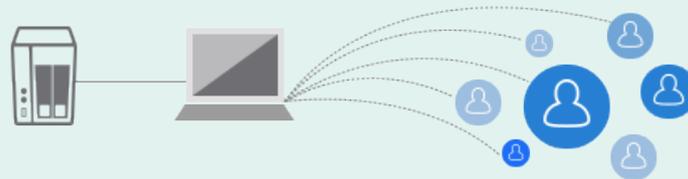

Advanced Login Control with Flexible Authentication

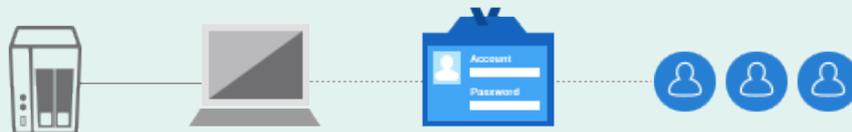

Use the 3 authentication methods to configure and fine tune access rights to QuickAccess connections. Go to the Control Panel and open the Network & Virtual Switch settings. The default mode is “NAS users” enabling only NAS users to use the QuickAccess connection for access. Other options include “No authentication” to allow access to anyone, and “Dedicated Users and Groups” to only allow selected users and groups to access the NAS. After the authentication method is configured, the user will be authenticated accordingly when they connect to the NAS through the QuickAccess connection (which uses the CIFS protocol).

If you have configured users and their privileges, select "NAS Users" to allow all NAS users with proper folder permissions to access shared folders.

If the NAS is only used by one person, "No authentication" can be used to bypass authentication for easier access to the NAS.

If the NAS is shared by many people and access authorization is required, select the option "Dedicated Users and Groups" to allow only selected users and groups to access the NAS.

Multi-Zone smart fan setting

Hyperconvergence brings more workloads that are more demanding to NAS. As the number of apps and background tasks increases, the power required to run those workloads generates more heat. To provide sufficient heat dissipation, the system demands higher-capacity fans running at higher speeds. Our multi-zone smart fan design enables users to adjust individual fan speeds independently and dynamically to provide cooling for HDDs and CPUs. Each fan is able to operate at its optimal speed effectively reducing noise and power consumption. QTS provides smart fan functionality enabling you to define threshold values to enable the system to adjust fan speeds automatically and dynamically. For example, if the temperature exceeds 35 degrees, the fan can be set to operate at its full speed. Advanced temperature analytics built in to QTS enable you to customize your fan settings according to the environment for reducing noise and power consumption and increasing ROI.

 TVS-x82 and TVS-x82T series support multi-zone smart fan settings.

Verbal system warning

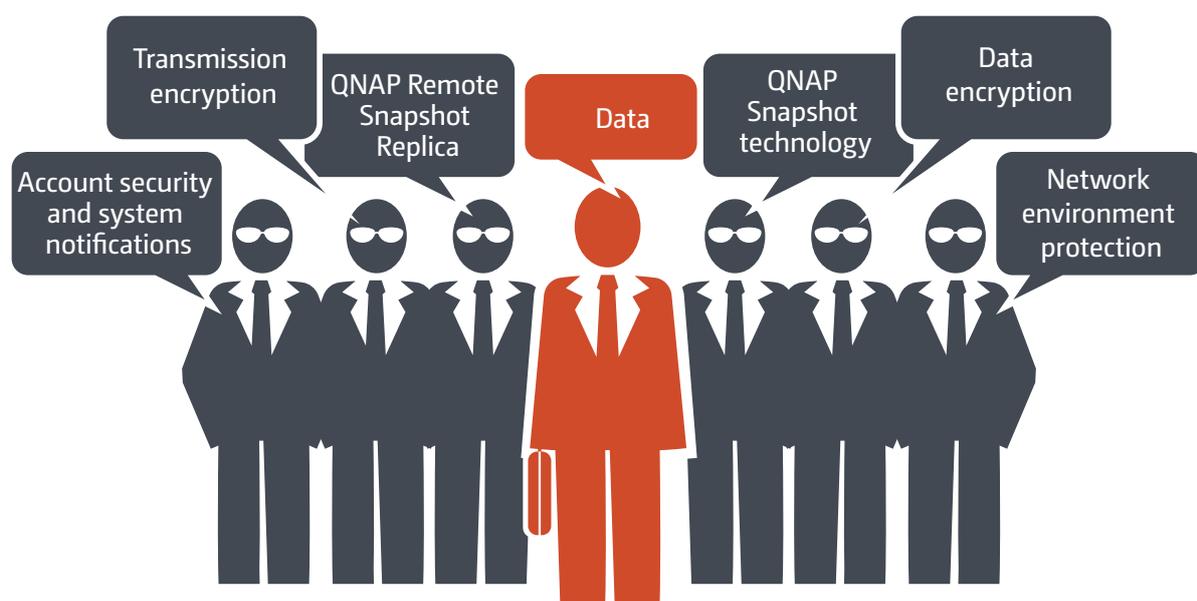

QNAP NAS* now provide verbal alerts for system events enabling instant understanding of system events without reference to user manuals.

 This feature is supported on the TVS-x82/TVS-x82T series

Data Security

Secure your data with six protection mechanisms

Organizations may face insurmountable financial liabilities if they lose sensitive data. With increasing risks of data breaches and leaks, network storage security is more and more under the spotlight. Personal data including private photos and videos in addition to business data also need protection against unauthorized access. QNAP helps you to minimize the risk of data breaches with our six data protection mechanisms, allowing you to focus more on using your data rather than worrying about it.

1. Network environment protection

Connection management (black/white list)

Allow or deny specific IP addresses or subnets to connect to the NAS. This increases connection safety by creating lists of allowed and blocked IP addresses. For example, block an IP address from accessing the NAS for one hour, one day, or permanently based on the criteria that it has over five failed login attempts in the last minute. Servers of the blocked IP will be unable to connect to the NAS. Block a user who has stayed online for too long or logged in from suspicious IPs to enhance system security further.

Service binding

QNAP NAS are equipped with multiple Ethernet ports, and can permit data access through every port. Service binding allows users to bind network interfaces with certain services (e.g. critical company data can be accessed only by specific personnel through specific protocol or allowed internal IPs) to enhance system security. In addition to security protection, service binding with LAN ports can ensure critical services get dedicated bandwidth.

2. Account security and system notifications

Two-Step verification

The Two-Step Verification* requires a user to log in to the QNAP NAS with both a password and a 6-digit one-time password (OTP) generated by an authenticator app. To simplify the log in process, trusted devices (e.g. home computer) can be "remembered" and only the password will be required from future log in attempts from that device.

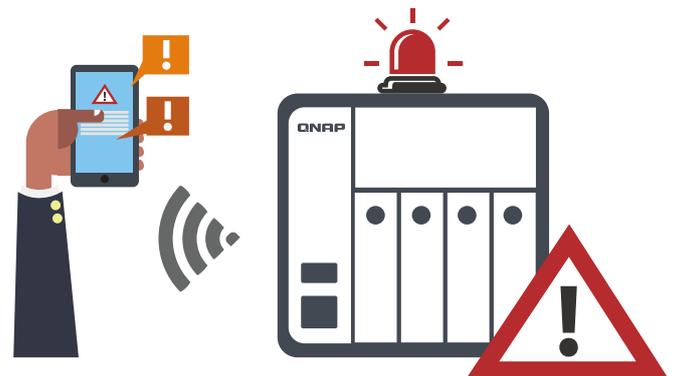

➤ This requires the installation of one of the following authenticator apps on your mobile device: Google Authenticator™ (Android™, iOS®, BlackBerry®) or Authenticator (Windows® Phone).

Push service

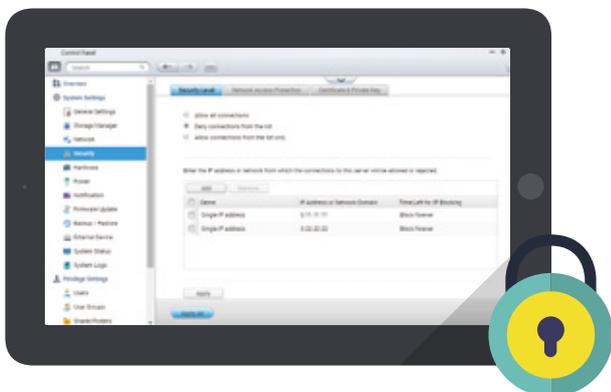

In addition to email and SMS, you can get messages sent to your mobile devices in the event of a system failure or other warnings*. This keeps you updated with the latest system status so that you can take immediate action to rectify the situation and reduce the risk of data loss.

➤ Requires installing Qmanager on your mobile device.

3. Protection by transmission encryption

Network transmission encryption

Advanced AES encryption ensures the security of shared folders. Without the key, no one can access the data in encrypted folders or files. Data transmitted over the Internet can also be encrypted to protect data security when using services such as FTP, WebDAV or in File Station. QNAP NAS provides SSL connectivity, and SSH encryption to secure data transmission and authentication. System administrators can restrict access to HTTPS (SSL over HTTP) encrypted connections. SFTP is also supported for transmission security and file access. The SSH encrypted connection provides another layer of protection for data transmission over public networks.

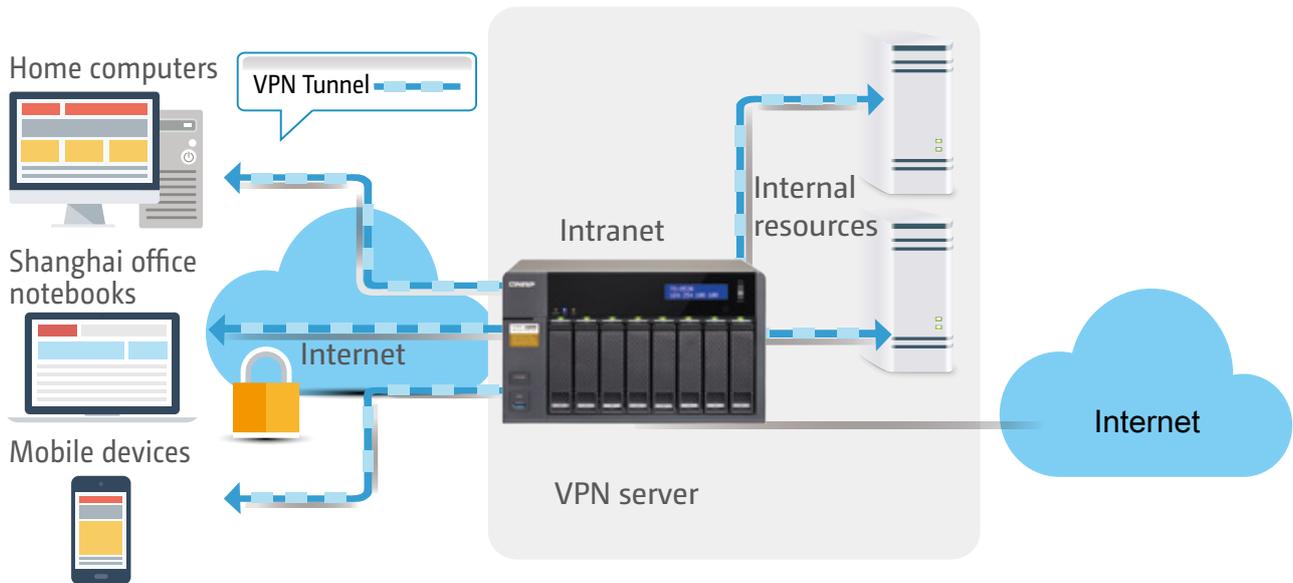

The following services provide encryption:

rsync backup (SSH encryption), RTRR backup (SSL encryption), SFTP: FTP (SSH encryption)
 FTPS: SSL/ TLS encryption, web server (SSL encryption), share access (SSH encryption)

VPN Server

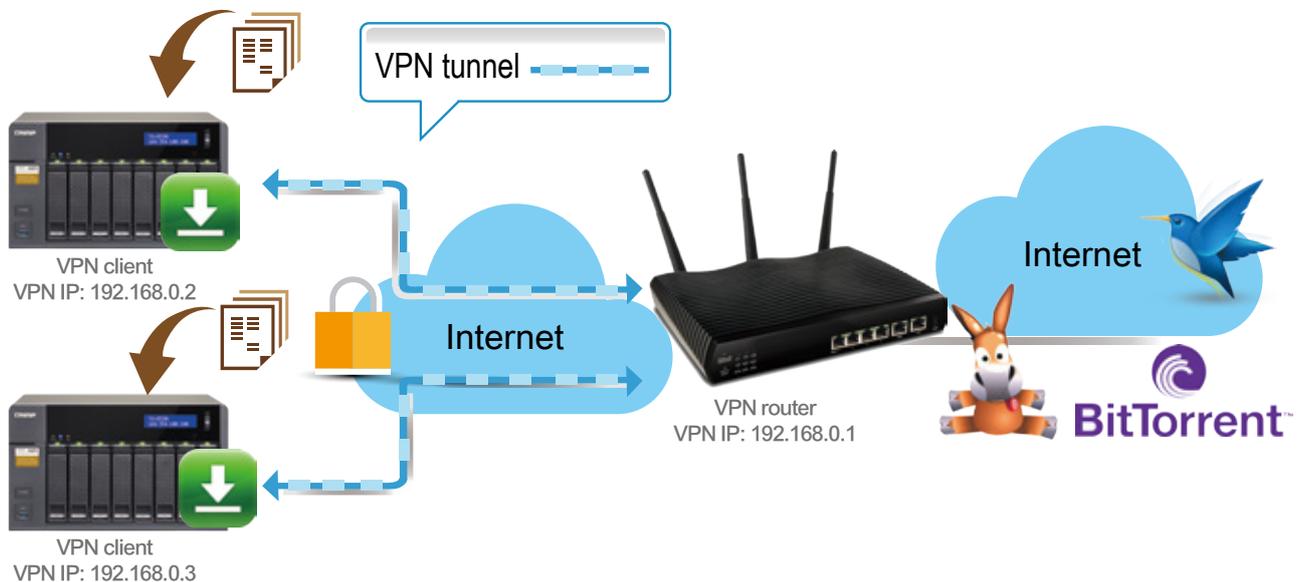

A Virtual private network (VPN) enables secure connections to access network resources and services across a public network. A VPN offers a convenient solution for NAS users to build end-to-end encrypted tunnels to your QNAP NAS. Whether you are an individual user or an IT administrator, you can use the built-in VPN server (L2TP/IPsec, PPTP, or OpenVPN) or VPN client (PPTP or OpenVPN) on the NAS for such purposes.

The VPN server also comes with user and connection management to help you manage VPN services. Furthermore, a VPN can help gain access to resources that may otherwise be restricted by your network environment.

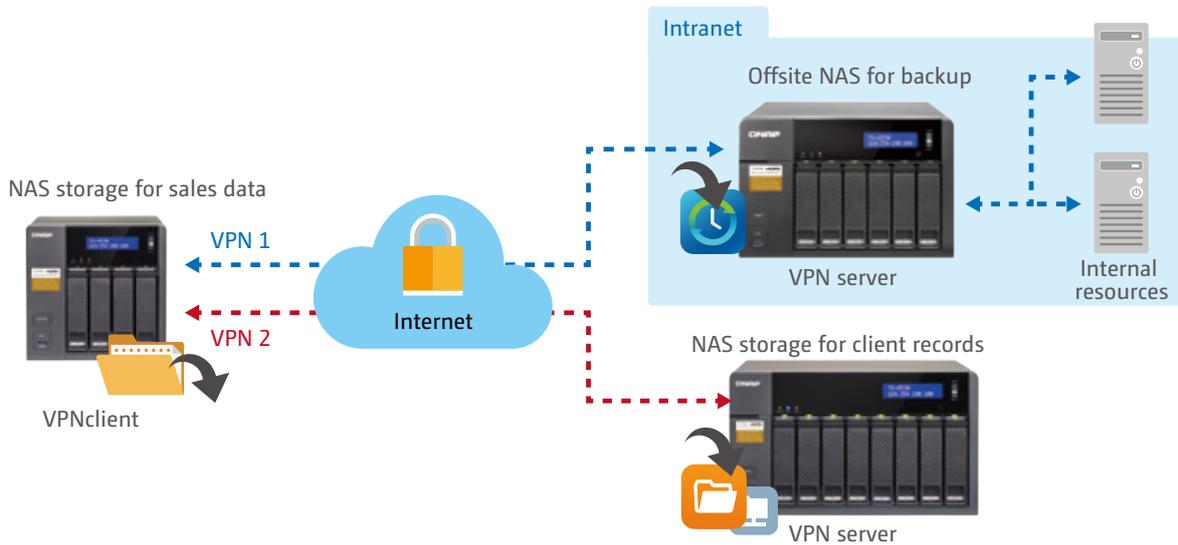

VPN Client

When the QNAP NAS acts as a VPN client, VPN can better protect your data when you use services like BitTorrent and eMule. By using this type of configuration, you can set up remote site backup with secure data transmission. For example, configure the NAS to be a VPN client for secure data transmission when setting up backup or other services to branch offices at remote locations.

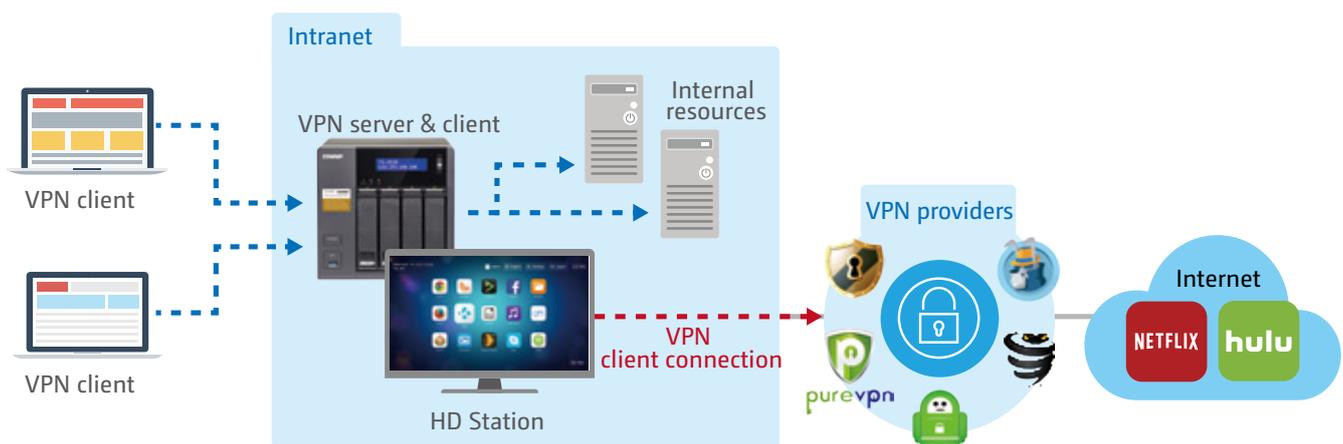

Support for multi-connection VPN Clients

QTS 4.2.2 introduces full support for multi-connection VPN Clients. A single VPN Client now supports multiple VPN connections to different VPN servers. For example, a NAS can simultaneously tunnel to a VPN server on both an enterprise and a client site. This enables simplified backup administration jobs in Backup Station or remote connections using Samba in File Station while ensuring secure data transmission.

Simultaneous VPN server and VPN client roles

QTS 4.2.2 (and later) fully support simultaneous VPN server and VPN client roles. For example, the VPN server can facilitate other devices not on the local LAN to connect to it, while also enabling the VPN client to connect to other VPN servers. For example, configure the NAS to be a VPN server to allow secure access of Intranet resources from remote devices while setting up the NAS to connect with other VPN server to use services such as Netflix and Hulu via HD Station, bypassing regional restrictions on these services.

Proxy Server

The Proxy Server application provides an intuitive interface to simplify proxy server settings on your NAS, enabling you to operate your own proxy server in just a few clicks. The proxy server provides cache and connection controls for Internet services. For companies that need a boost to web response time and security, this application can be leveraged to make your NAS a web proxy server to protect other devices in your local network from Internet attacks. The following are the highlighted features:

Caching: Improves response times and saves bandwidth required for web access by caching visited web content and other web resources.

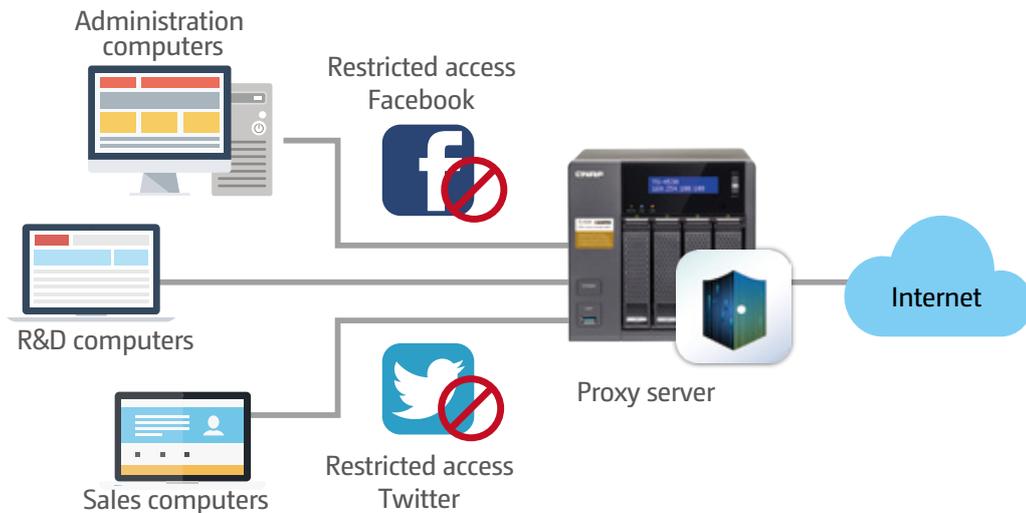

Access Control: blocks access to certain websites or restricts access for Internet connections.

Logging: logs visits to web sites for generating statistics to aid in network management.

Anti-virus: QNAP NAS integrate SquidClamav, an anti-virus designed exclusively for proxy servers. SquidClamav performs packet inspection on traffic from the proxy server to ensure non-malicious traffic. SquidClamav also supports white listing of both file types and account names enabling users to configure allowed content types and trusted connections.

 Anti-virus function is available for x86-based NAS models.

Advanced Settings: In addition to the settings in the GUI, users are able to enter Squid commands in advanced settings to customize the proxy server, edit cache settings, and access control without an SSH tool.

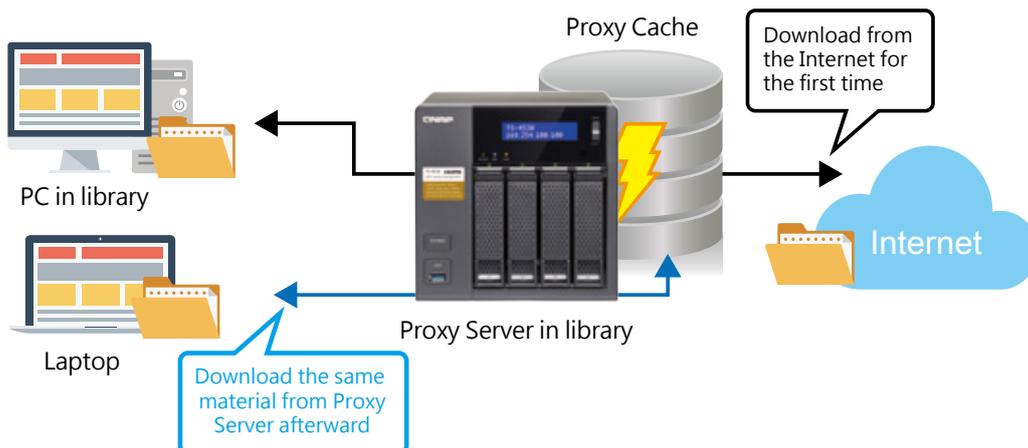

Ideal for Proxy Server deployments

Caching proxies keep local copies of frequently requested resources, enabling large organizations to save upstream bandwidth, increasing efficiency. A proxy server is a server that acts as an intermediary by retaining copies of popular documents, web pages, or other resources for requests from its clients. This is an ideal role for a NAS server since NAS have a tremendous amount of storage space in conjunction with the option of allocating memory to dedicated cache functions. Moreover, caching proxies can further benefit from typical RAID and/or SSD in a RAID configuration for very significant performance improvements.

Application scenario: Proxy Caching - bandwidth savings and application acceleration

In a library, a client computer often requests download of large-sized published journals and research papers. This consumes a lot of available bandwidth while taking a lot of time to complete the download. The Proxy Server on a QNAP NAS can solve this problem with its dedicated cache storage, saving Internet bandwidth while increasing the speed of the download.

4. Data encryption

Internal hard drive encryption for the entire system

QTS offers volume encryption to protect the data stored on the NAS. The system will ask for the encryption key when mounting the encrypted volume and the data is inaccessible without it. This function effectively protects data from being accessed if the entire NAS or individual drives are stolen.

External hard drive encryption

External storage devices are convenient for data migration. QTS also supports AES-256 encryption to protect against unauthorized access of external USB/eSATA drives.

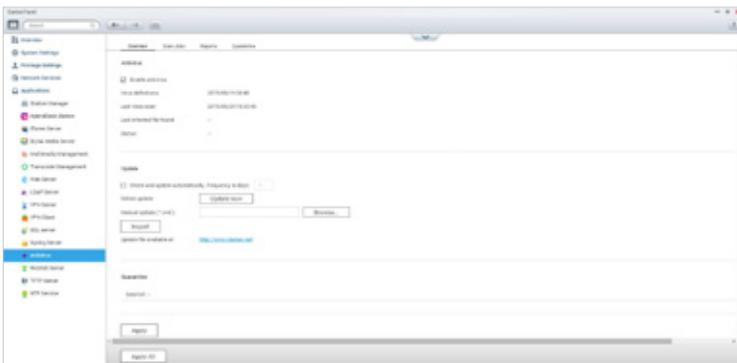

Folder encryption

Additionally, the NAS also offers folder encryption — to encrypt data in a specific folder to protect it from being accessed by unauthorized users.

Anti-Virus protection

QTS integrates the ClamAV™ antivirus toolkit to defend against the latest viruses, malware, worms, and Trojan horses with continuous free virus database updates, ensuring continuous business operation. Email notification upon task completion or virus detection is built-in.

QTS also supports McAfee™ virus scanner (which is available in the QTS App Center with a free 30-day trial). You can install McAfee™ to safeguard against the latest viruses or malware with automatic software and virus database updates.

 The McAfee virus scanner is only available on x86 NAS models.

5. QNAP Snapshot Agent

QNAP's whole volume/ LUN Snapshot Agent employs Copy-on-Write technology to record file state. If a system failure occurs, users are able to immediately revert the system to a specific state earlier in time.

6. Remote Snapshot Replica

Use Snapshot Replica in Backup Station to backup snapshots to a remote site. With so many layers of protection, you will never worry about data loss again.

 Snapshot is only available on certain models and requires a minimum of 4GB RAM.

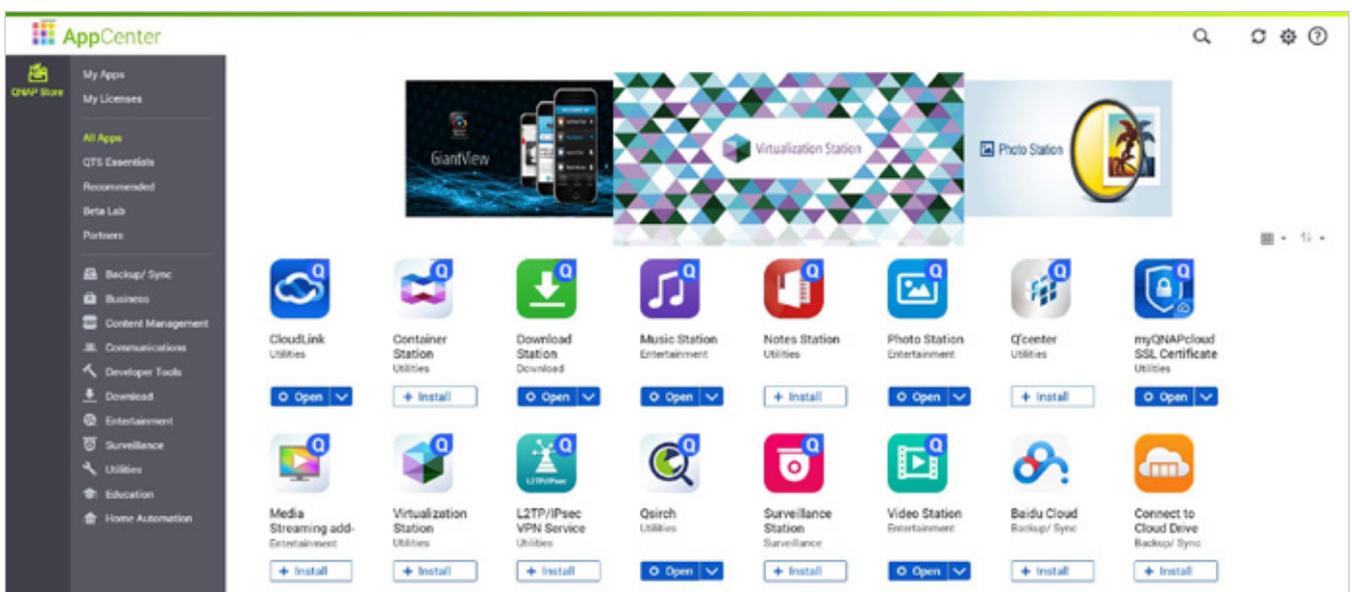

App Center

Customize your QNAP NAS for endless possibilities

Extend the functionality of your QNAP NAS to enrich your work and home life. QTS App Center provides various install-on-demand apps ranging from cloud backup/sync, home entertainment to ERP tools for you to enjoy more applications and to increase the total value of the NAS.

Newly designed App Center interface

The App Center has been redesigned to be simpler and easier for you to use. Search by category, by keyword, or try a suggested app from the live scrolling QNAP recommended app ticker. Alternatively, view the app selection by list to get detailed information about all the available applications. The App Center now supports multiple languages to suit your language preferences.

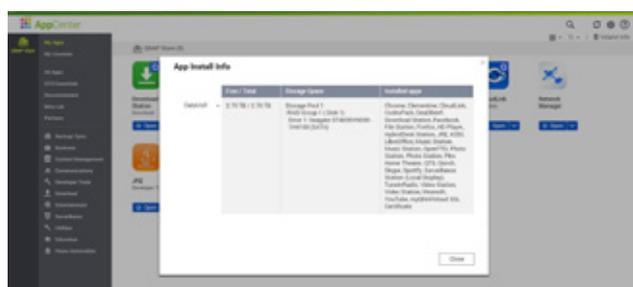

App management and upgrade reminder

Click the "My Apps" category on the left to browse, open, start, stop, or remove and manage all of your installed apps. When there is an update to any of your installed apps, an upgrade reminder will show on the QTS desktop to help you keep your NAS applications up-to-date.

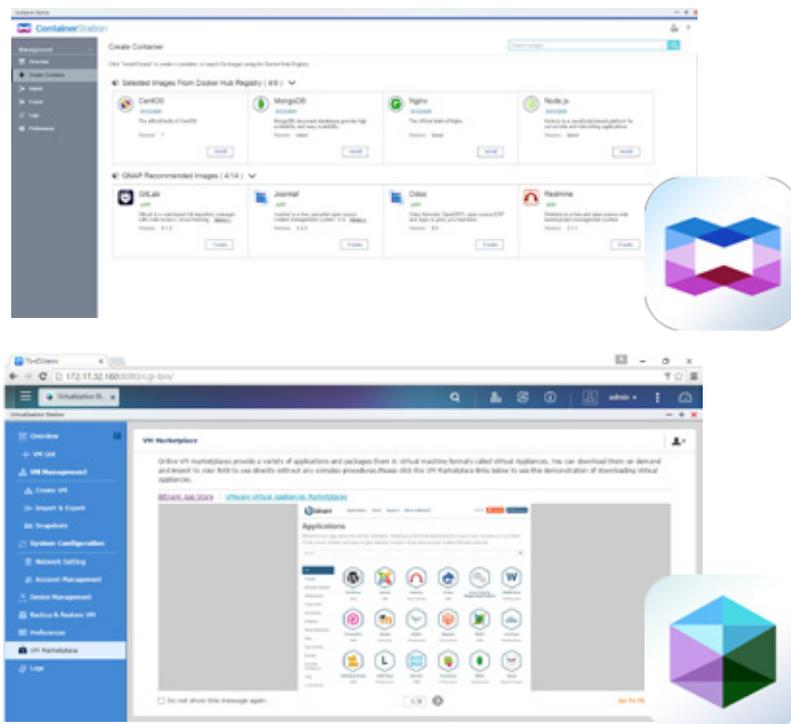

1. Click "Volume Info" to view the information about the volume on which the app is installed.

2. Create and display an app shortcut on the login screen, enabling users to access the app directly from the login screen.

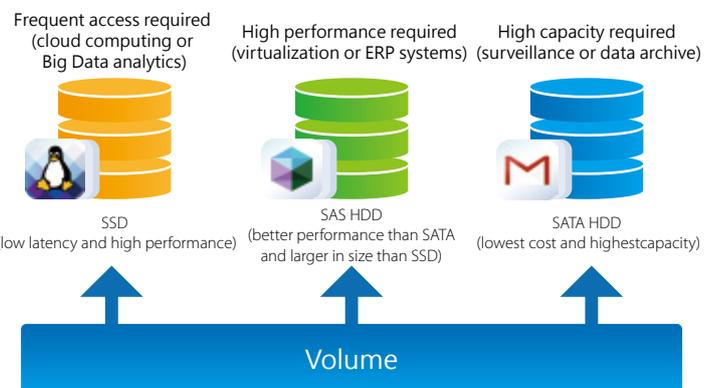

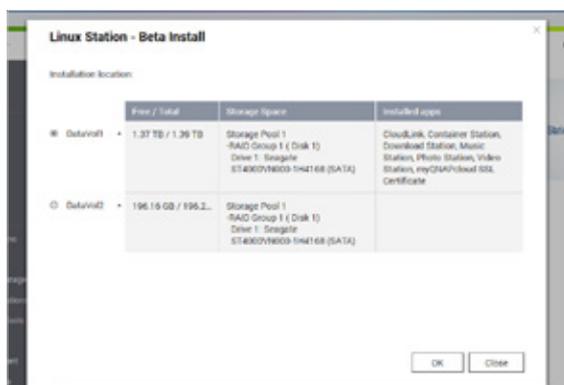

Functionality expansion without limits

The QTS App Center provides more than 100 add-on apps in several categories including Backup and Synchronization, Business, Content Management, Communication, Developer Tools, Download, Entertainment, Surveillance, and general purpose Utilities. Download applications from the QTS App Center to customize your NAS to suit your needs. Alternatively, download and deploy apps from public repositories for use in Container Station or Virtualization Station.

Utilize tiered storage architecture to optimize application efficiency

Leveraging the tiered storage architecture of the QNAP NAS, applications can be installed on a specific volume or freely migrated between different volumes. This enables the flexibility to manage applications based on performance and capacity requirements. For example, separately install frequently used applications on volumes consisting of SSDs and install performance-demanding applications on volumes consisting of SAS drives efficiently maximizing storage utilization and improving application performance.

 Linux Station is the first app to support this function, others will follow soon.

Comprehensive Virtualization Platform

Versatile VM and container deployment

QNAP offer both Virtualization Station and Container Station for virtualization. Virtualization Station has an upgraded underlying network architecture and improved network performance. Create virtual machines with independent operating systems for virtual desktop environments, or deploy virtual servers to install software, services, or applications with fixed resources on each guest OS. Alternatively, deploy lightweight containers, which share the kernel with the host system and do not require a full operating system enabling rapid deployment of highly focused application-oriented virtualization, and run the containered applications on any cloud that supports Docker® or LXC.

For personal or home uses, we offer the exclusive QNAP virtualized Personal Computer (QvPC) Technology that enables you to use your NAS as a PC. Simply plug in a monitor, keyboard and mouse to be able to operate the system and access files on it in lieu of network connections.

Virtualization Station:

- Requires a full operating system and specifies computing performance (CPU cores, RAM, etc.).
- Supports non-Linux OS virtualized environments.
- Independent and dedicated operating environment (dedicated here means VMs can maintain full isolation from each other as if it was running natively on a dedicated CPU with Intel® VT-x).
- Move existing physical computers into virtual machines, i.e., physical to virtual (P2V).
- Required in an environment running backup tasks or restoring the entire OS or an application server.

Container Station:

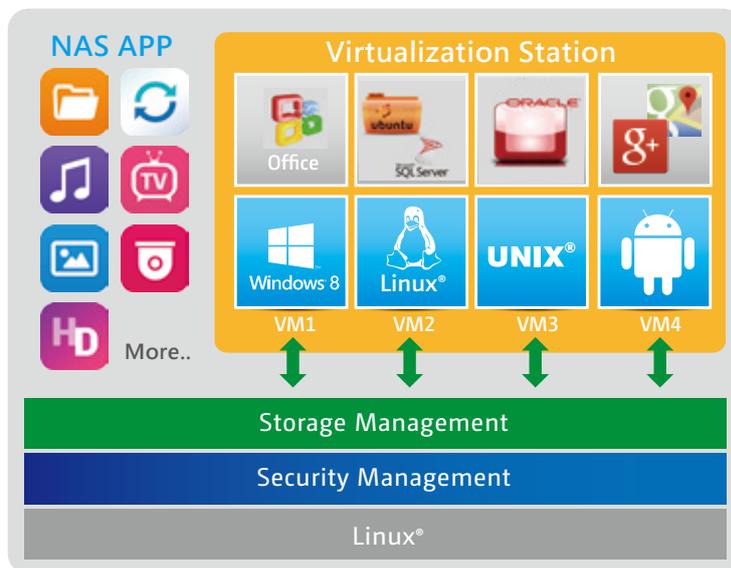

- Extremely lightweight operating system, e.g. any Linux® OS from as little as 200MB.
- Easy to migrate, upload or download applications to the cloud anytime.
- Runs development applications on any version of Linux® without compatibility concerns.
- Adopts JeOS (just enough operating system) to fit the needs of the particular application.
- Easy transfer ability among teammates and rapid-rebuilds make software containers ideal for software development.

Virtualization Station 2.2

Supports GPU pass-through, shared network interfaces

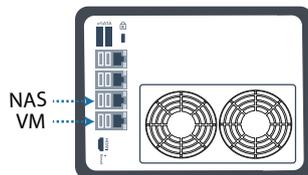

Virtualization Station eliminates the constraints that exist on conventional VMs (slow network speeds) to provide a better user experience. Create multiple VMs on a QNAP NAS and install Windows®, Linux®, Android™, and UNIX® based VMs so that every VM can serve in a different role. One QNAP NAS can literally be every type of computer you need.

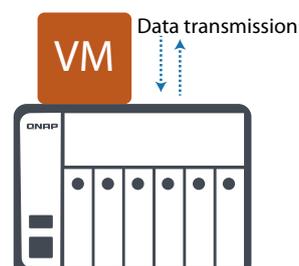

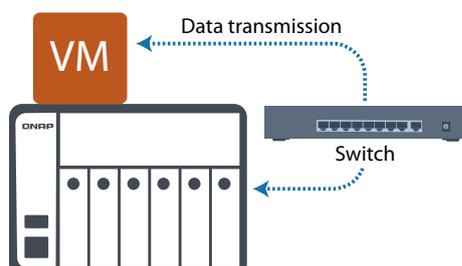

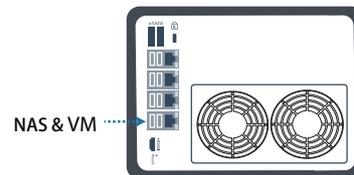

QNAP advances in VM network structure, again — the Software Defined Network

A dedicated 10 GbE LAN port for VM Ethernet is no longer needed. By adopting a Software Defined Networking approach, VMs can now share the network interface with the QNAP NAS to maintain the best data transmission speed without being limited by hardware resources.

Previously, virtual machines required dedicated network ports.

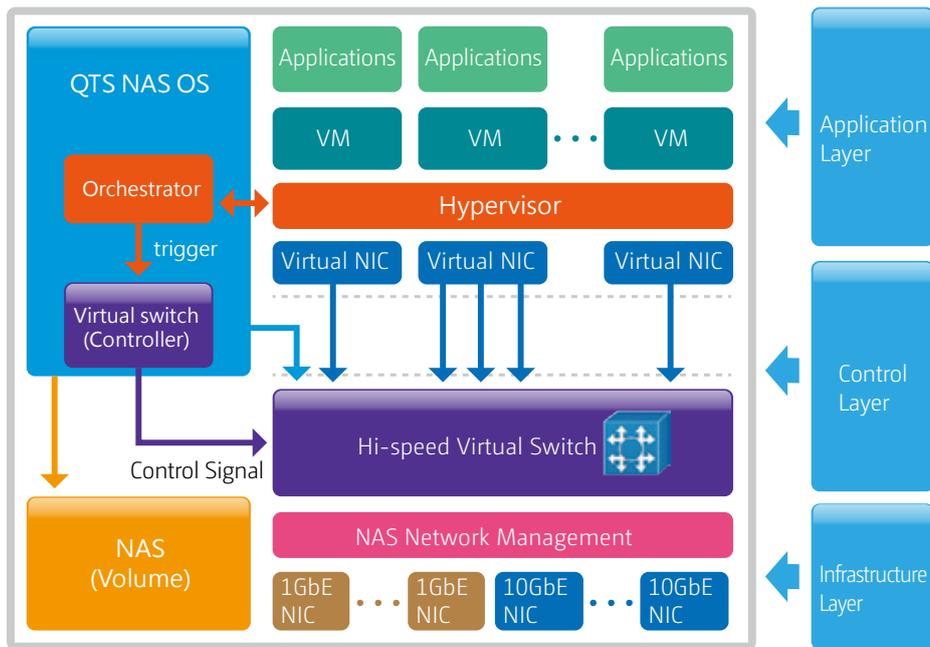

Now, virtual machines can share network ports with the NAS.

VM orchestrator manages workload schedules through communication with the Hypervisor at the Application Layer.

When the Virtualization Station orchestrator receives a transmission request from the Hypervisor, the orchestrator will signal the vSwitch Controller (as the QNAP NAS's network control), and then the vSwitch Controller of the control layer will dynamically adjust the Hi-speed Virtual Switch so that VMs can connect with the Physical Networks or NAS storage for data communication.

By employing a high-performance virtual switch VMs are no longer confined to the limits of the transmission speed of the physical NICs when transmitting data between VMs or between VMs and the NAS. This additionally frees up 10GbE network ports for other services instead.

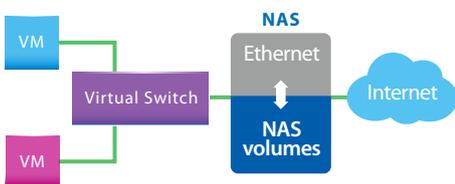

Virtual Switch

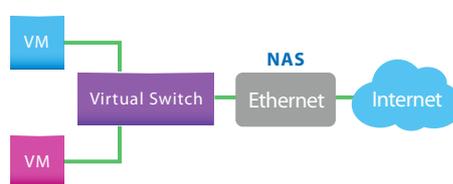

Virtual Switch is the new network architecture employed by Virtual Station. Virtual Switches are an efficient and effective network design when compared to dedicated network ports. Virtual Switches enable VMs' to share Ethernet interfaces removing the need for a dedicated VM network. Bypassing the need to transfer data through the physical network equipment also boosts the transfer rate between VMs and the NAS. The Virtual Switch is capable of 10 GbE and port-trunking, enabling you to obtain a fast and secure network environment.

Different Networking modes of Virtual Switch

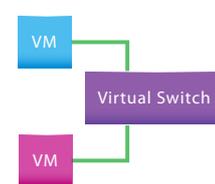

- Bridged Networking
- External-only Networking
- Isolated Networking

Attaching an Ethernet interface (Port-trunking available) to a Virtual Switch creates a bridged network. The NAS and the Virtual Switch can share the same Ethernet interface without occupation and supports high-speed data transfer via internal routing.

Specify an Ethernet interface for a Virtual Switch to enable dedicated routing between virtual switches and external networks. Enable DHCP to automatically assign an IP address to a Virtual Switch or choose to manually assign an IP address.

Not attaching any Ethernet interface to a Virtual Switch creates an isolated network. Manually setting IP address of VMs can enable communication between VMs connected to the same Virtual Switch.

 Available port-trunking modes: Active Backup, IEEE 802.3ad, Balance-tlb.

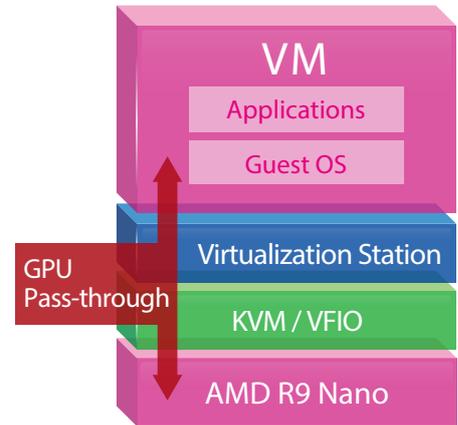

GPU Pass-through

QNAP NAS adopt Intel® processors and leverage Intel® Virtualization Technology to run virtualized platforms. The built-in hardware-assisted Intel® Virtualization Technology drastically increases performance and introduces ring-based privilege security at the silicon level. In addition, improved I/O performance and availability is achieved through Intel® TV-d technology and its direct assigning of I/O devices to virtual machines. Assign a PCIe external graphic card* directly to a virtual machine via GPU Pass-through to achieve near native capability of a GPU on a virtual machine with full support for OpenGL and DirectX.

➤ GPU Pass-through is available on TDS-16489U, TVS-ECX80U-SAS, and TVS-x82 Series models

➤ Before purchasing a GPU, ensure GPU compatibility, the GPU physical dimensions are suitable, and if the GPU requires additional power supply. Visit www.qnap.com for further compatibility information

GPU pass-through communicates between Linux's KVM/VFIO, the GPU and reaches the VM via Virtualization Station. This architecture achieves 80% of the native performance of the GPU. A DirectX performance comparison between a physical system and a VM using an AMD Radeon™ R9 Nano on TDS-16489U is shown below.

GPU Pass-through – TDS-16489U & R9 Nano

CPU: Dual Intel® Xeon® E5-2620 (2.4 GHz)

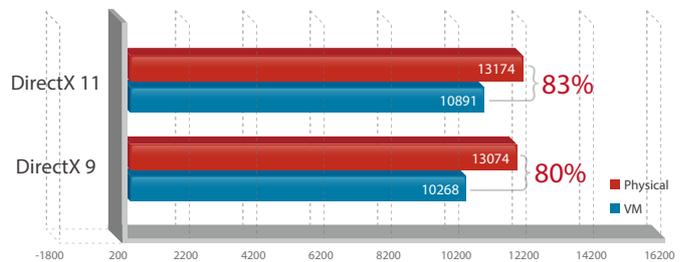

External graphics card: AMD Radeon™ R9 Nano (PCIe x16 Slot)

HDDs: Seagate® 1TB HDD

Memory: 16GB DDR4 registered

AMD R9 Nano

- AMD R9 Nano
- API support: DirectX® 12, Mantle, OpenGL® 4.58, Vulkan™, OpenCL™ 2.0
- PCIe® version: 3.0
- 4K resolution: yes
- GPU clock speed: up to 1000MHz
- External power supply: 1x8-pins
- Dimension: Full-height, compact, and dual-slot

QVM supports 4K displays, audio output

QVM in HybridDesk Station enables the use of a VM as a PC simply by connecting an HDMI® monitor, keyboard, and a mouse. QVM offers 4K resolution and virtualized audio output to support a wide variety of applications. This makes QVM ideal for video applications.

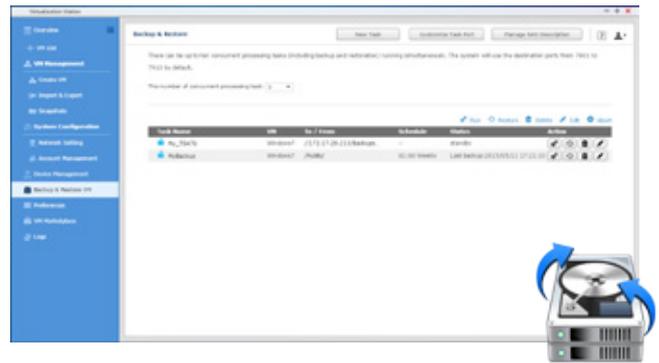

➤ Applicable models: TVS-x80, TVS-x71, TVS-x63 (excluding TVS-563), and TS-x53A.

➤ noVNC is an HTML5-based remote desktop web client that can communicate with a VM. noVNC does not support audio transmission. For audio output, use Windows® Remote Desktop or the SPICE® Client to connect to the VMs.

VM backup and restore

Virtualization Station, makes managing multiple virtual machines on a QNAP NAS effortless. VMs can be backed up/restored centrally, from the easy-to-use interface. Users can obtain scheduled tasks/status, schedule backup tasks and maximum number of backup copies, and manually start or stop backup tasks. Online backup tasks run in the background without interrupting VM operations and/or powering off the system. Virtualization Station can automatically start a restored VM, simplifying the process and reducing downtime.

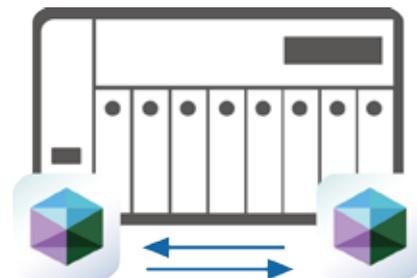

Device management

The Device Management screen provides an overview of all VMs, keeping you informed of the storage capacity, network interface, and USB devices of the NAS as well as letting you connect or remove a new device.

Virtual machine import/export

Virtual machines of various formats can be easily imported to and exported from the Virtualization Station. IT administrators can get VMs up and running quickly on a QNAP NAS or other Hypervisors.

USB devices (USB Pass-through)

Virtualization Station supports connecting USB devices to virtual machines. Users can select commonly used USB devices such as storage devices and card readers to be connected to virtual machines using Virtualization Station. This can be used together with QVM Desk just like a PC. Users can also connect USB scanners to a QNAP NAS via Virtualization Station and store scanned data directly to the NAS without requiring Internet bandwidth. Further, with the advent of USB 3.0, higher data transmission can be easily achieved.

 Please note that this function is only available on Windows® 8, Windows® 8.1, Windows® Server 2008 R2, Windows® Server 2012 and Windows® Server 2012 R2.

Seven advantages of QNAP's exclusive virtualization technology

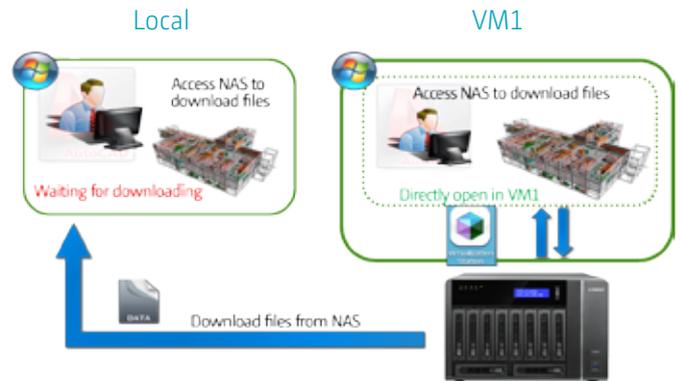

Visibility and direct access to files

Specific file formats cannot be opened directly by the QNAP NAS, but the Virtualization Station makes it possible. This saves bandwidth and access time. Administrators can install Windows®, Linux®, UNIX®, and Android™ based VMs on the QNAP NAS to run any supported application or file.

Save bandwidth & time

Downloading a large amount of data to a local PC can take a long time and use up network bandwidth. When accessing data on the QNAP NAS through virtual machines on the Virtualization Station, you can enjoy secure data transmission and save bandwidth & time as the data is not transmitted via physical network cables.

Enhanced security

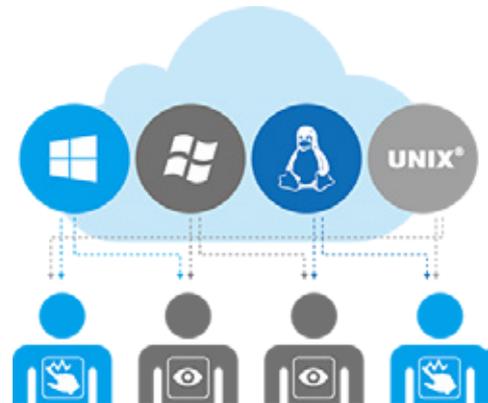

When accessing files & data on a virtual machine they are not transmitted outside of the QNAP NAS. This provides a secure environment that prevents sensitive data from being intercepted and saves bandwidth and network resources when accessing large files.

User-based permissions settings

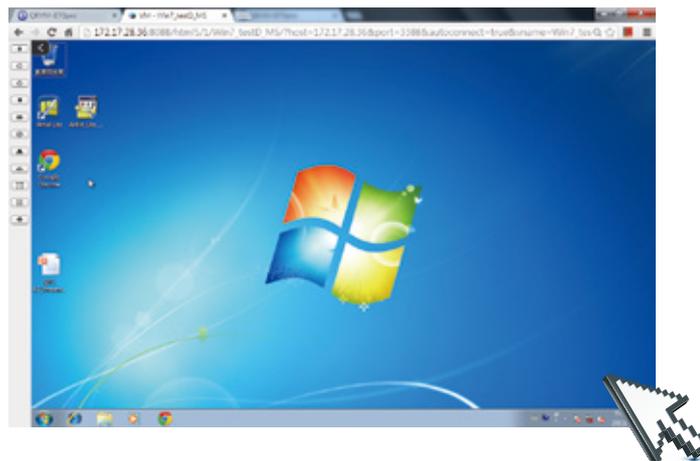

The Virtualization Station administrator can create users and set granular permissions for each Virtual Machine (VM), helping to efficiently manage and allocate VM resources for users with different needs. With these permissions, users can work independently on their VM without worrying about their work being interrupted or data being lost because another user has accidentally powered-off the VM.

- **User-based permissions include:**
 - Console permissions: Control and View-only
 - VM controls: Snapshot and Advanced

Operate VMs as Remote Desktops

Enjoy the convenience of operating Windows®, Linux®, UNIX®, and Android™ based VMs as remote desktops. Buttons are provided on the left side of each VM display, allowing users to suspend, shutdown, force shutdown, reset, bring up key combinations: Ctrl +Alt+ Del and function keys, and take snapshots of the VMs.

Container Station 1.3

Rapidly development and deployment

Virtualization is key to maximizing IT resource utilization in the era of big data and IoT (Internet of Things). Container Station is developed following the Just enough OS, or JeOS, philosophy. This lightweight virtualization technology can instantly and truly create a ready-to-use environment on PC's, QNAP NAS and the Cloud for RD developers and IT administrators.

For example, build a project in Container Station on your home computer and after the completion of each stage of the development, upload the container to Docker Hub™ or export and save it on the NAS. Your coworkers can then download the container and continue with the next development stage. With a container-based application, on QNAP NAS, virtualized servers, OpenStack, or on the cloud, developers can deploy and share any app on any of these platforms, quickly and reliably.

A growing number of popular apps

Container Station offers the most up-to-date and top-of-technology applications for rapid deployment with just a click. The following apps are now available: LibreOffice, MongoDB, Nginx, Node.js, Redis, MySQL, WordPress, Deluge, Minecraft, Wine, Jenkins, GitLab, Redmine, Joomla! and OpenERP.

 Container Station is available in the App Center.
Docker and the Docker logo are trademarks or registered trademarks of Docker, Inc. in the United States and/or other countries. Docker, Inc. and other parties may also have trademark rights in other terms used herein. Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Integrate LXC and Docker® to bring even more value to your NAS

LXC: the lightweight Linux Container enables a high-performance lightweight virtualized Linux® environment on your NAS. Install a lightweight version of Linux® (e.g. Ubuntu, Debian, Fedora) as the base for your containerized application with LXC.

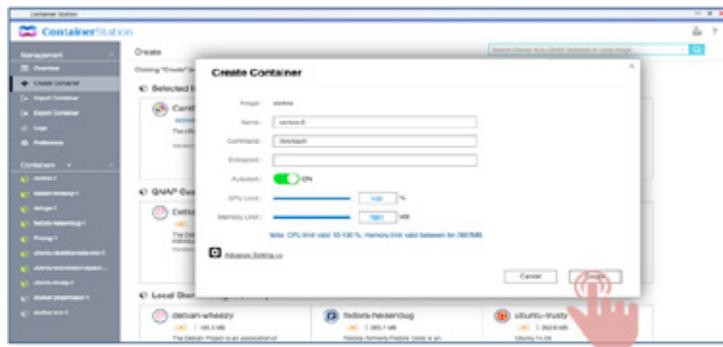

Install-on-demand applications

Use the Docker Hub™ to search for publicly shared applications, whether they are databases, web servers, programming languages, or development tools; install it as you would an app on your smartphone.

One-click installation

Forget complicated configuration and simply enjoy the benefits of software containers. Just click "Create" and the system will automatically download and install the applications.

Containers on ARM-based NAS

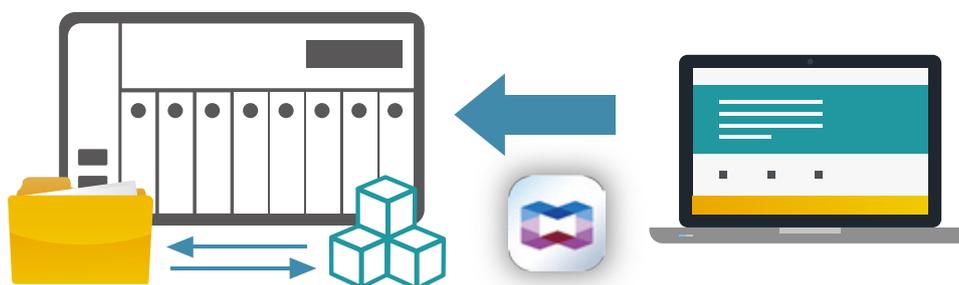

Entry-level NAS models, e.g., TS-231+, TS-431+ enable Linux® virtualization on QTS 4.2.2. Download the default Linux® version from Container Station and start using LXC and Docker® on your ARM® based NAS.

Access shared folders

Shared folders mounted in a container (or from other containers) save data to the NAS at comparable access speeds to that of a bare metal environment.

Export/import software containers

Easily export software containers along with data contained in it to any shared folder. Import software containers from a PC or shared folders. Containers are easily backed up and transferred to other QNAP NAS.

Resource management

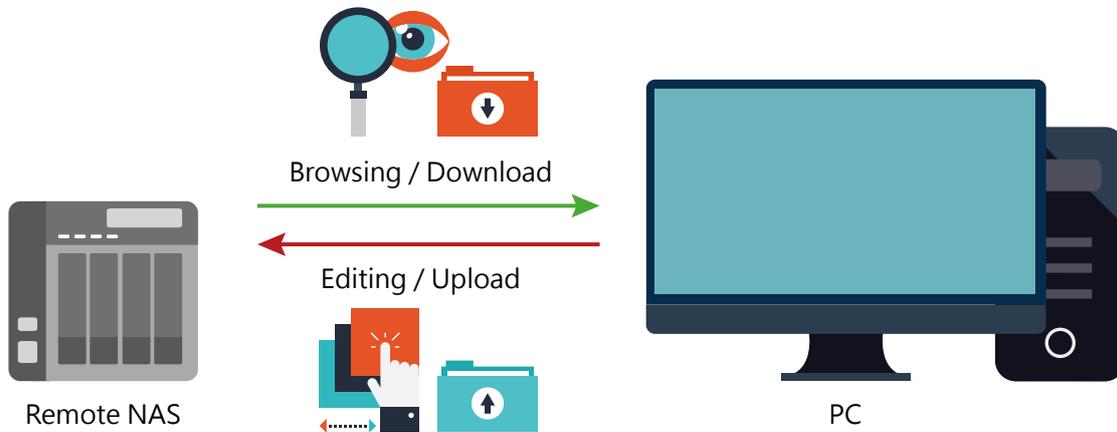

Specify host CPU/memory resources allocated to a software container and monitor the host in addition to each container's performance from a single screen. The visualized presentation with graphics provides a quick overview of resource consumption and aids in resource management.

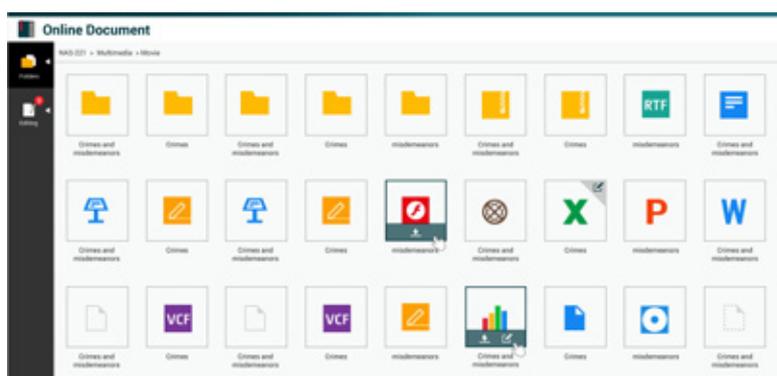

Online Documents - Online document preview and editing

The increasing risks of breaches and leaks mean both business and personal data needs greater protection against unauthorized access.

With a traditional NAS, you must download files from the NAS to your computer, open and edit them, and then upload them to the NAS again.

With Container Station's Online Document feature, you can directly preview, edit, and save (Office documents, photos, and text files) files on the NAS from anywhere.

Supports a wide range of file types used by LibreOffice®, Pinta, Emacs, and more.

LibreOffice®- a powerful office suite

The suite has many applications: Writer (word processor), Calc (spreadsheet application), Impress (presentation engine), Draw (drawing and flowcharting application), Base (database and database frontend), and Math for editing mathematics.

Pinta - a program for drawing and image editing

It offers a simple yet powerful way to draw images with file formats such as JPEG/JPG, Tiff, TGA, PNG, ICO, BMP and OpenRaster. It is surely more powerful than Windows Paint.

Emacs – a customizable text editor

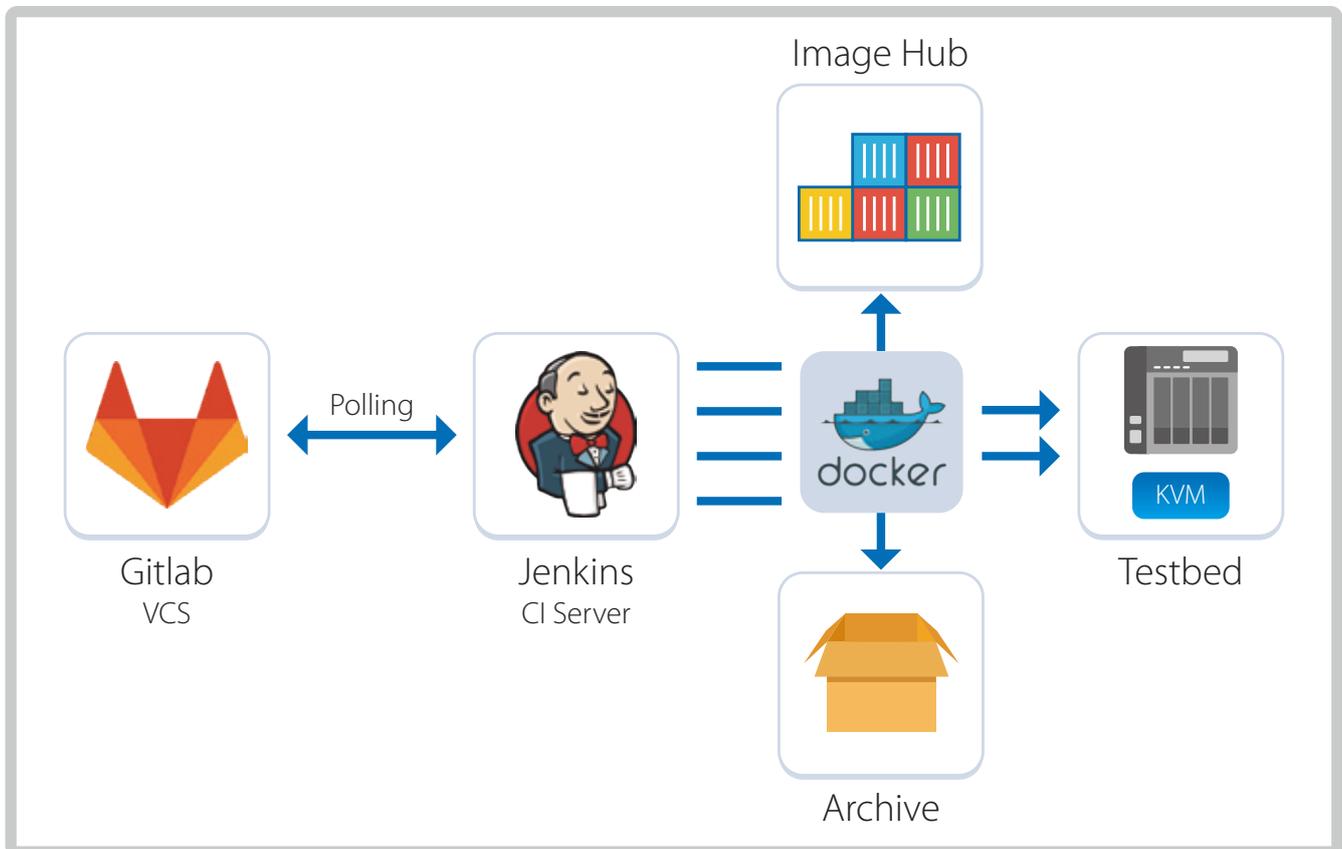

Emacs is a powerful text editor with extensibility and customizability. It is popular among programmers and computer technicians.

 Container Station 1.4 or later (available Q1 2016) is supported.

The emergence of DevOps ("Development Operations") – Utilize Container Station to establish a continuously integrated development environment

No need to memorize complicated software configurations, just install the necessary apps on demand with one click and Container Station will automatically finish the set-up process, quickly facilitating an ideal development environment suited for collaboration.

A continuously integrated development environment

 Recommended apps for quick installation: Private Registry, GitLab, Jenkins.

QIoT Containers – Use containers to accelerate efficient IoT development on your private cloud

A look at IoT technology

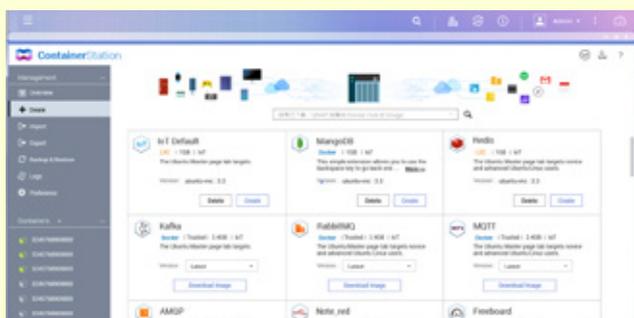

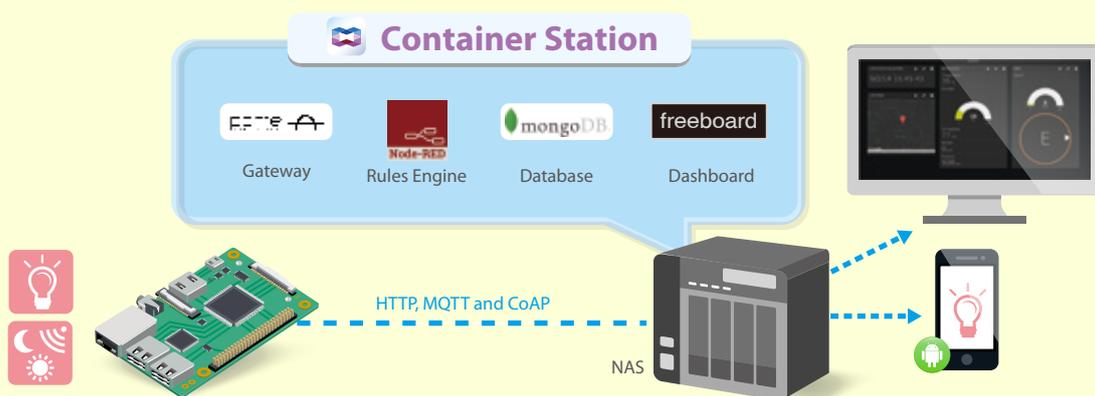

IoT (Internet of Things) architecture consists of 3 main layers: sensors, networks, and applications. The sensor layer includes devices that collect data about the environment and send that data to the network layer. The network layer transports the accumulated data to the application layer; the application layer combines and processes the data to transform it to actionable information, and eventually help enterprises make informed decisions.

➤ While IoT appears very new and is generating a lot of industry hype, it is actually based on existing technology: sensors, networking, and application software. To accomplish the goal of an IoT, enterprises will embrace deeper, broader integration, and widespread interconnectivity.

QIoT containers with efficient development cases

Container Station provides several IoT containers to help developers build an IoT environment, integrate sensors, and make use of development kits (Raspberry Pi, etc.) with the NAS's Ponte (data receiver), Node-RED (data analysis), MongoDB (data storage), Freeboard (data presentation) to construct a comprehensive IoT architecture.

Container Station (v1.5) provides several helpful IoT applications including:

- Kafka · RabbitMQ · MQTT · Freeboard · Node-RED
- Redis · MongoDB · Ponte · Dashing · Freeboard

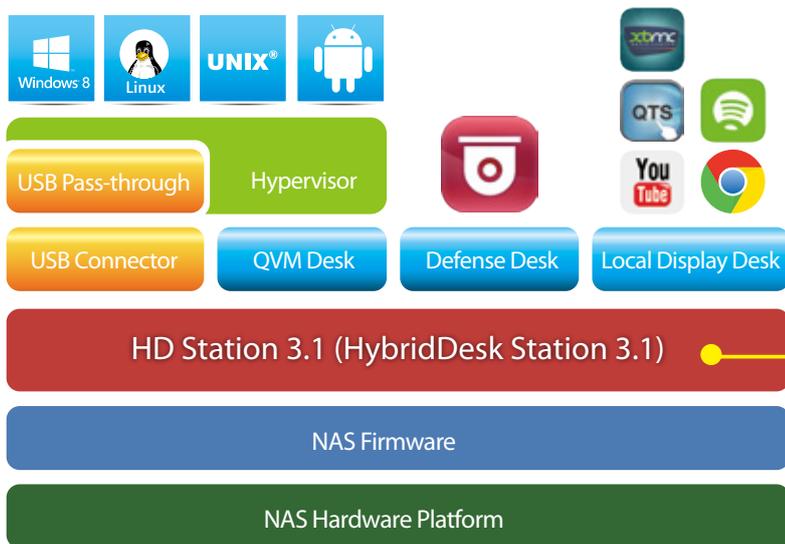

RabbitMQ Copyright © 2007-2016 Pivotal Software, Inc. All rights reserved
 Node-RED Copyright 2013, 2016 IBM Corp. under the Apache 2.0 license.
 freeboard freeboard is brought to you by Bug Labs, Inc. ©. All Rights Reserved.
 MongoDB Mongo, MongoDB, and the MongoDB leaf logo are registered trademarks of MongoDB, Inc.
 Kafka Copyright © Confluent, Inc. 2015. All rights reserved. Apache®, Apache Kafka, Kafka, and the Apache Kafka logo are either registered trademarks or trademarks of the Apache Software Foundation in the United States and/or other countries.

QNAP QvPC Technology

Use your NAS as a PC

With the growing trend of "Software-defined Everything (SDx)" in today's IT environments, QNAP has taken the lead in seamless hardware-software integration and offers the exclusive QNAP virtualized Personal Computer (QvPC) Technology that enables you to use your QNAP NAS as a PC. Simply plug in a monitor, keyboard, and mouse and operate the system via "HD Station (HybridDesk Station)" on the screen.

Connect a monitor with an HDMI® cable, and you can enjoy a variety of applications with HD Station 3.1. You can initiate the service in QTS system and install different applications according to your needs.

*All trademarks in this brochure are the property of their respective owners.

QvPC Technology features HybridDesk Station (HD Station) as the user interface, which consists of QVM Desk, Defense Desk, and Local Display Desk and provides SMBs numerous software applications.

The highlights of QNAP's exclusive QvPC Technology

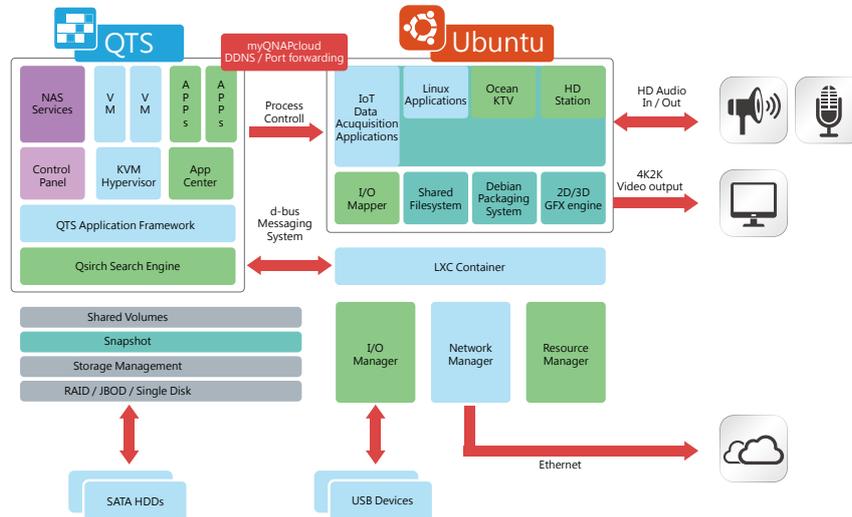

HD Station 3.1 is a monitor-based user interface based on QNAP's exclusive QvPC Technology. Simply plug in a keyboard, mouse, and an HDMI® monitor to a QNAP NAS and you can start the installation process and access data without connecting to a PC, tablet, or smartphone. A variety of applications are available on HD Station including QTS, Mozilla® Firefox®, Google Chrome™, QVM, Xbmc®, and Surveillance Station. To increase data safety, HD Station 3.0 employs controls on user login to allow only authorized users to access data on the QNAP NAS using QvPC Technology.

HD Station also supports touch panels to control the system directly through a screen.

QTS with Integrated Linux for IoT Development

QNAP has employed advanced virtualization technologies to seamlessly integrate Linux with QTS, enabling you to use QTS while simultaneously using a Linux OS on an HDMI display. Expand the functionalities of your NAS with the QTS App Center, and exploit the incredibly popular open source Linux to leverage your NAS as a complete IoT development platform.

Use Linux Station to switch the output resolution freely or enable remote desktop connection to send the display to a web browser.

Install and enable Container Station, before installing Linux Station.
4GB RAM and HDMI output required. Remote desktop does not support audio output.

Seamlessly switch between HD Station and Linux Station

Select to output HD Station using the either the simple or the advanced mode. Go to [Control Panel] > [Apps] > [HybridDesk Station] to set the current display mode and switch the output on your HDMI display.

HD Station simple mode

Enjoy the multitude of supported apps, such as Kodi®, HD Player, YouTube®, JRiver®, and many more via a simple and intuitive interface. Use your NAS as a multimedia player and use your smartphone with QNAP app Qremote, an infrared remote control, or connect a keyboard or mouse for completely convenient playback and control.

Linux Station advanced mode

Install various applications on the Linux Station, an open-source platform. Customize a 3D desktop with thousands of desktop themes to choose from. It operates just like a PC.

Run Windows, Linux and Android virtual machines on a HDTV

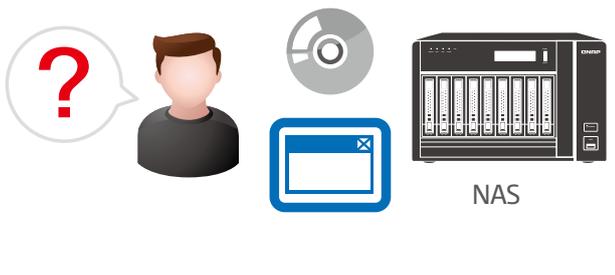

Leveraging virtualization technology, QNAP QVM Desk supports local display for a virtual machine and turns the QNAP NAS into a PC when connected to an HDMI® monitor, keyboard, and mouse. Any files on the QNAP NAS can be opened using virtual machines running Windows®, Linux®, UNIX®, and Android™ through QVM Desk. You can also instantly switch between different virtual machines to meet different computing needs, similar to using multiple PCs at the same time. Compared to the operations via a webpage, it is smoother, more secure, and worry-free on a QNAP NAS. Even when the Internet connectivity is limited, you can still access data and run virtual machines on a QNAP NAS.

Streamlined installation: No complicated procedures necessary to install your QNAP NAS

After purchasing a NAS, users usually install firmware from an installation disc and search for the NAS on their network, or log in to the NAS manufacturer's website to complete the installation process. For users without relevant networking knowledge, this installation process may be difficult.

QvPC Technology means users only need to plug in an HDMI® monitor, keyboard, mouse and follow on-screen instructions to complete the NAS setup. Even users without any network knowledge can easily set up and install a QNAP NAS. All files stored on a QNAP NAS are have redundant copies through RAID technology and are accessible via the Internet anytime.

Conventional installation: You need a disc or to log in to a website to complete the installation, and it can seem complicated to non-technical users.

Streamlined installation: simply plug in a monitor, keyboard and mouse and follow the on-screen instructions to complete the installation.

Defense Desk 24/7 safeguards your office and property

Live-view

QvPC Technology supports local display of live surveillance feeds on-screen with a QNAP remote control. You don't need an additional PC for live-view, nor do you need an Internet connection to check the stored video recordings. You can monitor up to 36 channels simultaneously, adjust PTZ functions, and conduct audio surveillance. QvPC also supports instant notification functions and will show alerts on the monitoring page should any incident happen. This ensures you are able to respond to incidents immediately and more efficiently.

Playback

Connect your QNAP NAS to a monitor to playback recordings. Just select a timeframe and you can search the recordings within that period. It also supports video fast-forwarding and rewinding (up to 16x speed). You can quickly look for detailed images with the zoom function, and listen to audio for key background sounds during the playback.

Local Display Desk

HybridDesk (HD) Station (enabled by going to "Control Panel" > "Applications") makes it possible to use the NAS as a PC by simply connecting an HDMI® monitor and a USB keyboard & mouse. The local display ensures output and access to media files without being connected to a network for more stable viewing experience and easier NAS operation.

Install a web browser to freely surf the Internet

Surf the Internet on your NAS by downloading Chrome™ or Firefox in HD Station. It is the easiest way to get online and find the information you need on the NAS.

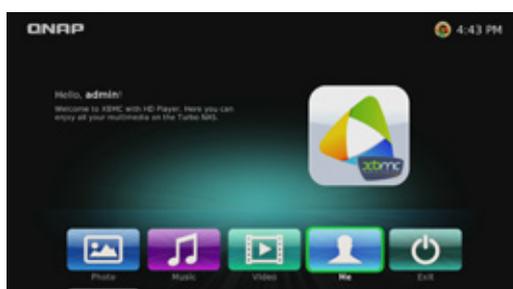

Multimedia entertainment

Enjoy a multitude of apps including Spotify®, YouTube®, and multimedia players such as Plex, KODI®, JRiver® and many more. With HD Station you can enjoy the ultimate entertainment experience.

Qremote for convenient control

Download the Qremote app to your Apple iOS® and Android™ devices to remotely control playback of multimedia files including videos, music, photos, etc. Alternatively, you can download the Official Kodi Remote app for the same purpose.

Surveillance Station 5.1

Build a professional surveillance system

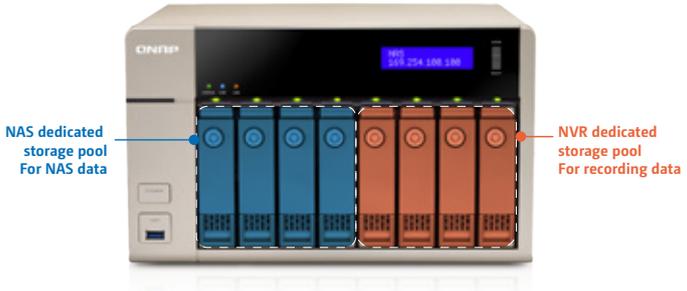

QNAP Surveillance Station 5.1 is a professional network surveillance video management system. One of the QNAP NAS flagship applications, Surveillance Station turns your NAS into a professional Network Video Recorder that can be operated from a PC, mobile device, or with an HDMI® local display. Supporting real-time monitoring, recording, playback, alarm notifications, Intelligent Video Analytics (IVA), and management, Surveillance Station safeguards your assets and property when used with supported IP cameras. Every QNAP NAS comes with a minimum of 2 free camera channels, is ONVIF® compliant, and compatible with over 100 camera brands (and more than 3000 camera channels) allowing you to easily build a professional video recording and monitoring system.

Before using Surveillance Station, please install the Surveillance Station App from the App Center. For a list of compatible cameras, please refer to www.qnap.com.

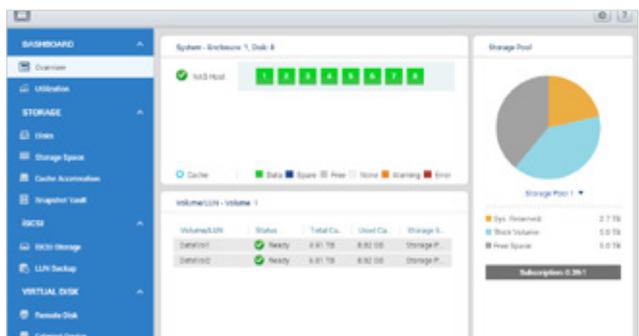

Tiered Storage for Hybrid NAS and NVR Operations

Empowered with a tiered storage architecture, QTS can store NAS and NVR data in different storage pools that consist of dedicated hard drives. Additionally, you can designate dedicated network ports for NVR or NAS traffic to achieve the best data write/read performance.

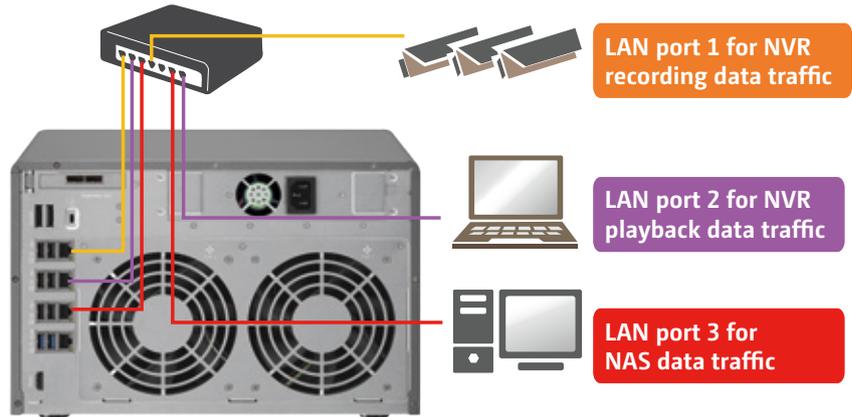

Set Dedicated Storage Pools for NVR

Using Storage Manager, it is possible to set dedicated storage pools for Surveillance Station to isolate disk arrays to ensure that NAS and NVR operations are separate.

Network Tap

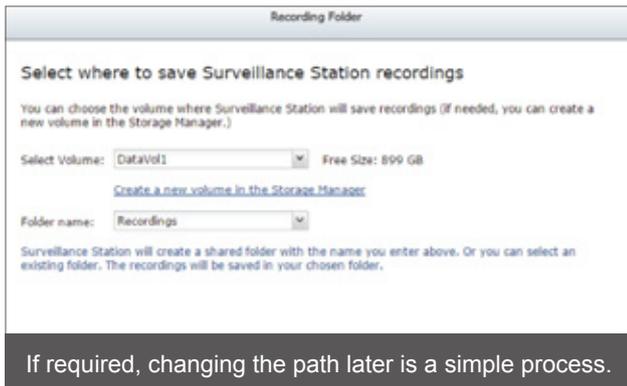

In addition to tiered storage, QNAP have also added a "network tap" capability to Surveillance Station. Activate this function on a QNAP NAS with more than one network port and easily reroute the monitoring network flow to other QNAP NAS network ports, optimizing the read/write performance for NAS and NVR traffic.

Quickly Build a Professional Surveillance System in 3 Easy Steps

1. Choose where Surveillance Station recordings are saved

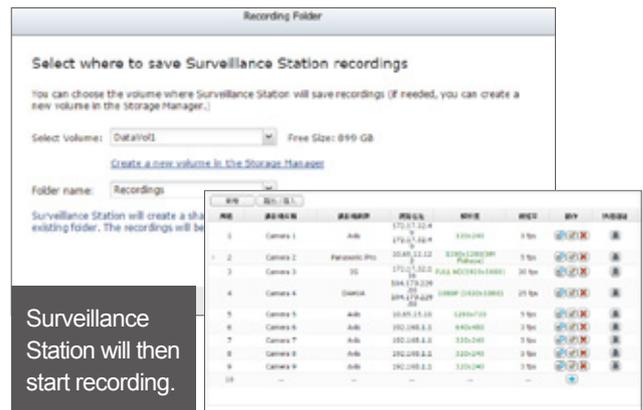

During the initial setup of Surveillance Station, designate a location to save Surveillance Station recordings. QNAP advises a dedicated storage pool for recordings.

➤ We recommend using hard drives specifically designed for NVR/surveillance purposes. Please refer to www.qnap.com for the compatibility list.

2. Set up the cameras

Complete the camera installation and confirm the cameras are on the same LAN, click "Add" and Surveillance Station will search for available cameras.

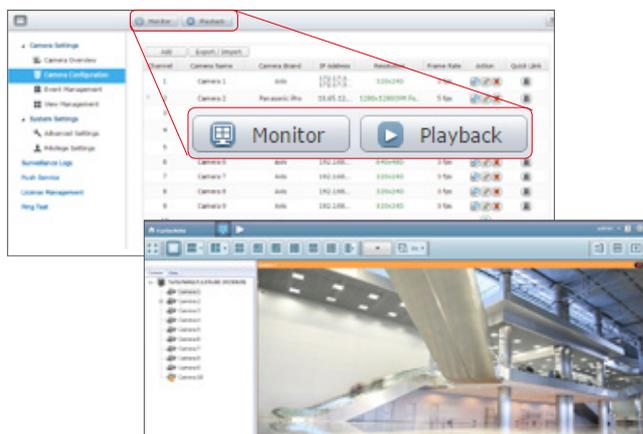

➤ In addition to IP cameras, USB cameras are supported by installing the QUSBCam app. Using USB cameras is an inexpensive way to extend surveillance coverage offering a huge array of camera form factors for suitable for a wide array of deployment scenarios.

3. Start monitoring or playback.

There are several ways to playback recordings or to monitor cameras with QNAP surveillance solutions. Click "Playback" or "Monitor" in Surveillance Station, or use the Vmobile App or QvPC to monitor the camera feeds.

➤ For NAS models with an HDMI® port and memory larger than 4GB, QvPC Surveillance Station (Local Display) can display monitored camera feeds on Smart TVs.

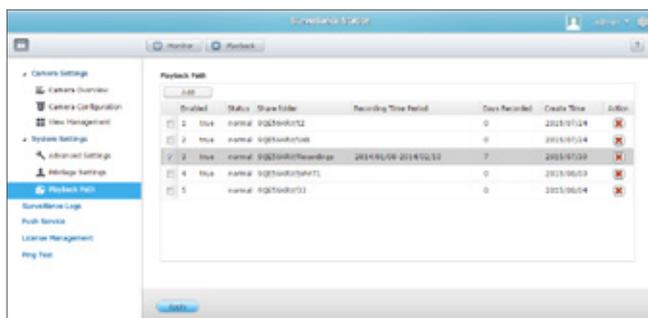

➤ If you are using a PC or Mac, please install the client utility first. Click "Monitor" or "Playback" and the wizard will show up to guide you through the installation process. Clients are able to log into different surveillance stations to monitor their subset of cameras.

Never miss any recordings

Playback path management

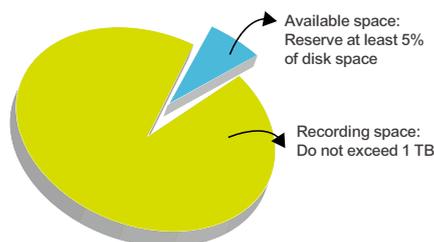

Following a change of the recording location, Surveillance Station 5.1 will automatically register the old recordings path in the Playback Path list. This ensures all recordings are available for convenient playback.

Automatic configuration updating

Surveillance Station 5.1 with a double video space usage threshold default settings, will not let you save images remaining space is less than 5%, or image space than 1TB. If you construct more than 1TB hard disk space for image storage monitoring, it is recommended to adjust the video size of the space and you can use the larger storage space.

Upper and lower storage limits for fine-tuned administrative control

Threshold values can be adjusted on-the-fly.

Flexible monitoring modes

Diverse layout choices for playback and monitoring

Surveillance Station 5.1 supports various monitoring modes to display 1, 2, 3, 4, 6, 8, 9, 10, 12, 16, 20, 25, 36, 49 and 64 channels on a single screen. Choose to display each channel sequentially, or use dual displays for a wider view.

Click "Refresh" to view the adjusted layout.

Playback speed control with the shuttle bar

With the speed-control shuttle bar, users are able to fast forward and rewind playback by dragging the bar to find the desired capture quickly.

Virtual camera

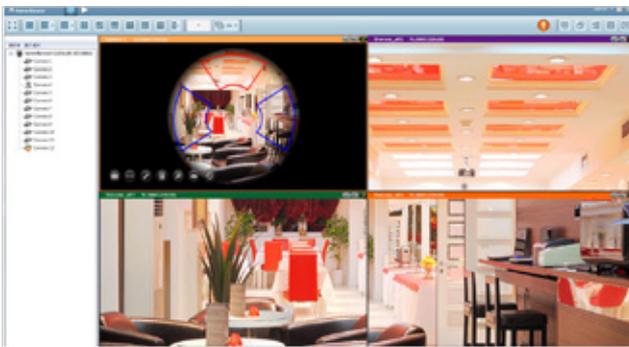

Very high-resolution cameras often lose details in playback display of huge coverage areas, presenting a problem for surveillance users. Using virtual camera technology, users are able to focus on defined sub-areas within the area captured. Virtual cameras do not require additional licenses, making them ideal for deployment in areas requiring expansive coverage

 The support of digital watermarking assists in verifying the authenticity of exported videos and snapshots by showing the exact recording date & time, camera name, and QNAP NAS model name, making it essential when videos are needed as verifiable evidence.

Qdewarp and ROI

QNAP Qdewarp

Fisheye lenses are ideal for wide-angle scenes. With de-warping technology, users are able view detailed images without distortion. Qdewarp is compatible with every fisheye camera that QNAP supports, and enables users to de-warp images at any time point in a recording. Qdewarp supports real-time monitoring and recording playback, ensuring there are no blind spots.

PTZ control (Pan/ Tilt/ Zoom)

Directly adjust the vertical tilt, left/right panning angles, and zoom on cameras with compatible PTZ (Pan/Tilt/Zoom) functions. The "Click Go" PTZ control feature greatly enhances the convenience of remote surveillance.

Region of Interest

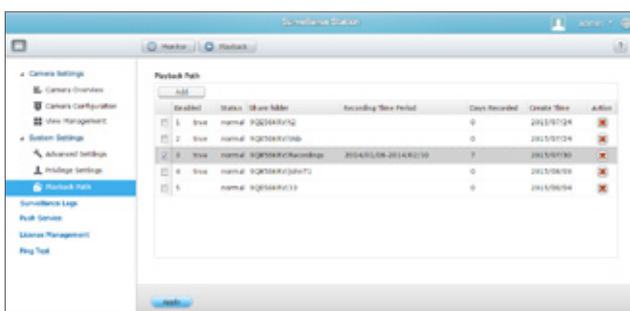

The 4K era is upon us and a huge number of cameras on the market now support 4K HD images. The ROI function is excellent for high definition cameras and enables users to freely enlarge, adjust, or move the region of interest on any recording channel. Surveillance Station 5.1 retains ROI settings for each session so it is ready at the next log in.

Immediate alerts for events

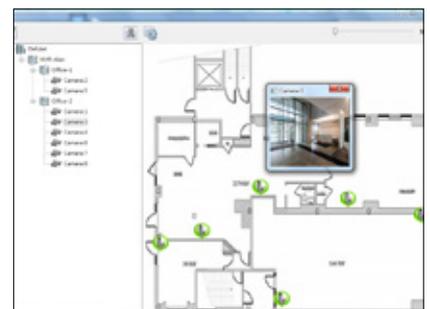

Set alert and notifications

When cameras detect motion or alerts are triggered, Surveillance Station will automatically send notifications to up to 5 email addresses.

Digital floor plan for camera locations

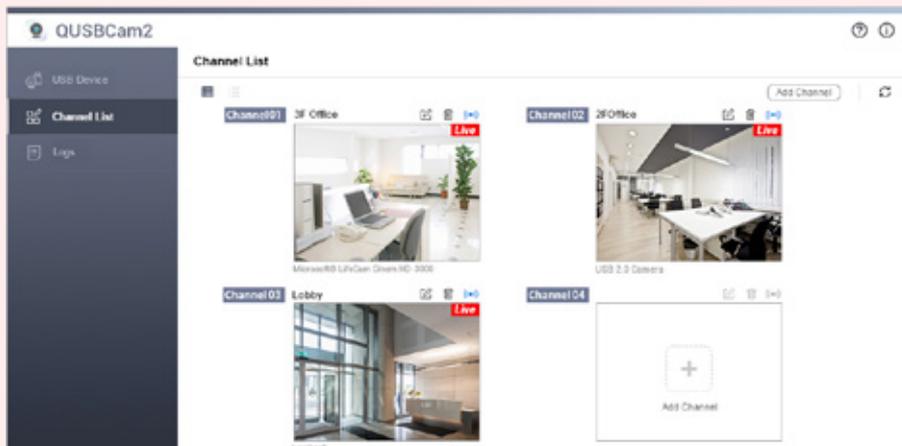

Uploading a floor plan to Surveillance Station enables users to map out where cameras are located. Based on alarm settings, the camera icons will then alert users to assist in decision making for appropriate action to be taken.

QUSBCam2– A handy surveillance tool

All-new QUSBCam2 supports ONVIF and RTSP

The all-new QUSBCam2 transforms a USB webcam in to an IP camera with full ONVIF compatibility and full support for the RTSP protocol. Use Surveillance Station to view real-time images from USB cameras via QUSBCam2. Use QUSBCam2 to build an inexpensive home surveillance system to monitor and record the images and sound captured by the deployed webcams.

Improve CPU performance with CodexPack

USBCam2 supports up to 4 USB cameras offering a wide range of flexible deployment options for a variety of usage scenarios. Coupled with QNAP NAS hardware-transcoding function, QUSBCam2 helps to reduce CPU usage to improve overall NAS performance.

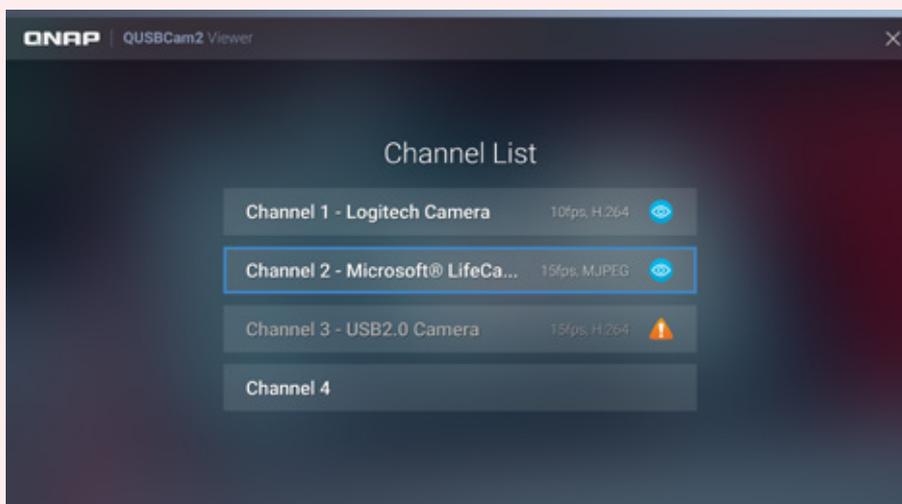

Please visit the QNAP website to find the QUSBCam2 USB camera compatibility list.

Direct view via webpage and HDMI output

View footage directly from your USB cameras in HD Station or via a web browser to assist in various tasks such as adjusting the camera's angle. Alternatively, use Surveillance Station to connect to QUSBCam2 to capture the entire camera screen from USB cameras.

Depending on the environment and usage models (such as streaming to multiple clients, or native support for MJPEG), the effectiveness and quality of direct access of images via a web browser may be affected.

Multimedia Center

Enjoy home entertainment with cloud technology

QNAP NAS are an ideal way to safely store and search through huge media libraries. QNAP provides several feature rich applications that enable you to enjoy your digital collections, empowering your NAS as a multimedia center for you to collect, share, and enjoy. In addition to streaming media files to your mobile devices, QNAP NAS enable you to enjoy your media at home in full HD quality with DLNA®, AirPlay®, Chromecast™, or a direct HDMI® connection. Further, use the powerful Download Station to enrich your collections for even more fun.

Photo Station 5.2

Safeguard and share your precious moments

QTS Photo Station helps you archive, easily manage, and share your precious memories. The Photo Station functions as your private photo hub while safeguarding your memories with the very highest levels of protection.

Switch between Gallery and Management

Switch between Gallery and Management mode to view and organize your photos easily. Photo Station provides three quick configuration menus to adjust the look and feel of how your photos are displayed.

Switch between display modes, and select the photos to display.

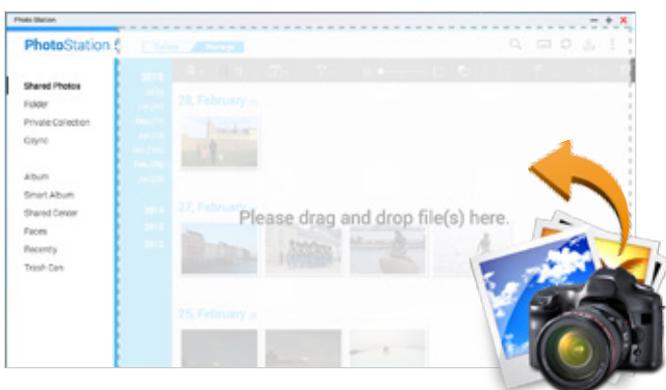

Customize the background music in gallery mode. The background music can be chosen from playlists in the Music Station.

Play your selected photos in a slideshow.

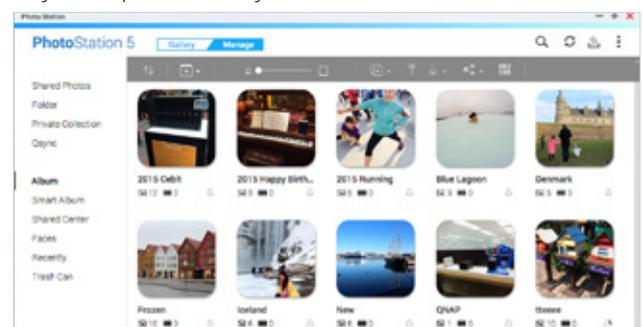

Centrally manage all your pictures on your NAS

Whether you upload your photos directly, or by synchronizing with the Qsync utility, using Photo Station to manage your photos (including very high-resolution photos) from multiple sources is a very effective way to organize massive volumes of photos.

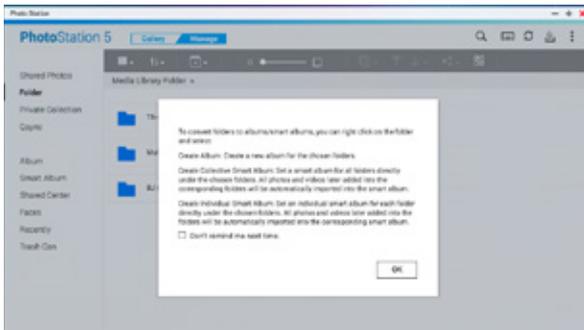

Create photo albums and smart albums

Create a virtual album and add photos to the album without moving the physical files. Alternatively, create a smart album that automatically searches and adds photos that match the search criteria such as today in history, a specific period, or tags. Creating a smart album with a specific period is an easy way to keep a record of your travels.

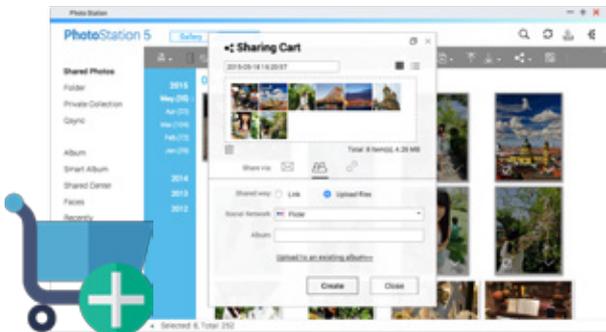

Convert folders to albums or smart albums

Instantly and easily, convert a folder to an album or a smart album. Folders that have been converted to smart albums will automatically import new photos to be displayed in their respective smart albums.

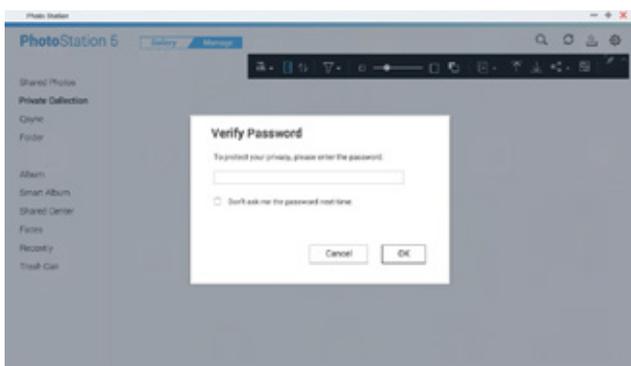

Share with your preferences

Use the Sharing Cart to add or modify shared content. Share content on your social networks, by email, or create a link to share.

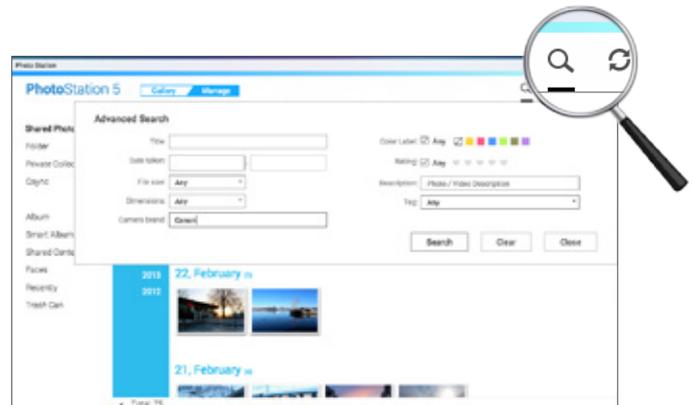

Create a Private Collection

Secure your important, private photos and videos in your own private collection with a password. Access to the private collection can then only be gained by entering the password.

Advanced search

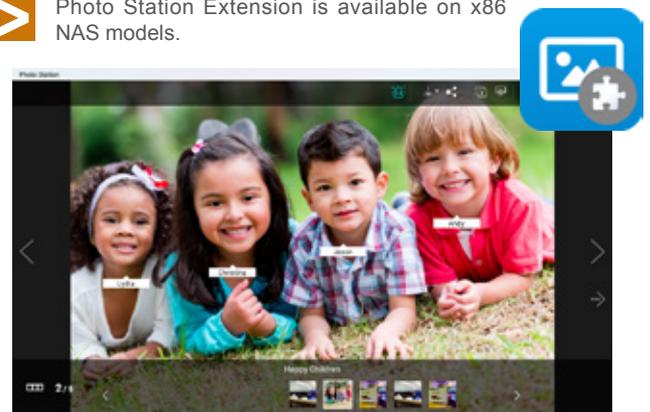

Photo Station provides an advanced search function to search photos based on specific properties such as title, date taken, label, tags, and camera manufacturer.

Facial detection and tagging

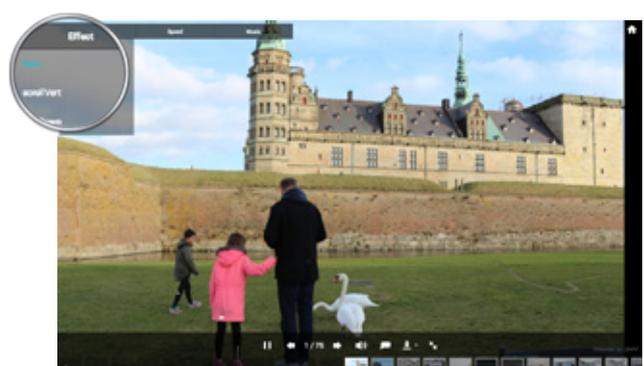

Photo Station supports face detection making it easy to tag people in your photos. In addition, it also supports converting of PDF file into pictures to view PDF files on any device.

▶ Photo Station Extension is available on x86 NAS models.

Play your photos as a slideshow

View your photos as a slideshow with dazzling transition effects. Create a playlist of your favorite tracks in Music Station and enjoy background music to accompany your slideshow.

Video Station 2.5 Entertainment beyond the limits of devices

Video Station helps you organize your library and makes your collections look great. Easily find the movie you're looking for with metadata searching, find the right covers and subtitles online, and then stream your movie over DLNA®, AirPlay®, or Chromecast™.

Your Own Dedicated Video Site

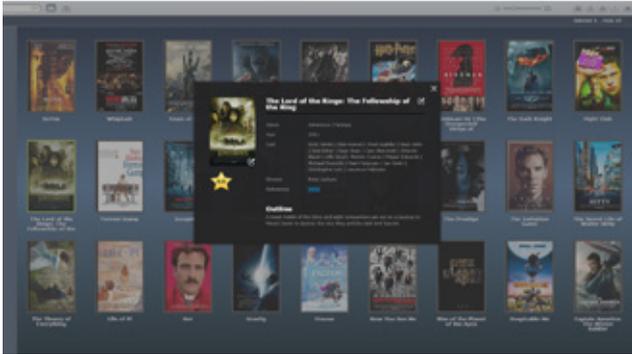

Video Station is an excellent platform for you to create your personal video website. All videos on a QNAP NAS can be categorized by Video Station and converted into different resolutions and universal formats for smooth viewing across any network bandwidth or any device.

Easy video categorizing

Set up video categories including movie, TV series, home video, and music video then create smart collections in terms of category, label, ratings, and more. The smart collection folder will gather similar videos for better management and to make it easier and faster to find videos you want to watch.

Automatically retrieve movie information

Video Station will automatically gather movie posters and movie information from the Internet (genre, director, actors, etc.) to enrich your collections and viewing experience.

Film playback around the home

QNAP NAS support DLNA®, AirPlay®, and Chromecast™ streaming, allowing different videos to be played on different devices simultaneously. This enables you to play a childrens film in the living room, while streaming other movies throughout the rest of your home.

Keyboard hot key support

Easily fast-forward, rewind, and adjust the volume using keyboard hot keys.

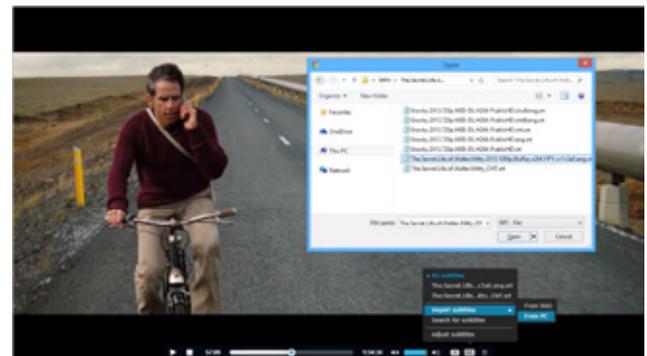

Comprehensive subtitle support

Upload subtitles from a computer or download subtitles from the Internet, enabling you to enjoy the movie in its native language, your native language, or a language you are studying.

Import subtitles file from your PC or NAS without needing to rename or relocate it.

The display of subtitles can be adjusted to change the font, size, color and display time, enabling you to customize them to your liking.

- ▶ Supporting .srt, .ssa and .ass subtitles files, and also supporting more languages, it frees you from worrying about format incompatibility and display issues.
- ▶ Subtitles can also be embedded into videos when sharing with your friends.

Music Station 4.8

Your personal music cloud

Build your very own music cloud with Music Station and use the Qmusic mobile app to bring your favorite music with you wherever you go.

Easily organize large music collections

Music lovers often face the problem of organizing and managing huge music collections. Music Station offers a large number of categories and browsing modes and enables you to create up to 200 playlists. Your favorite music will always be available to you.

Your personal music cloud

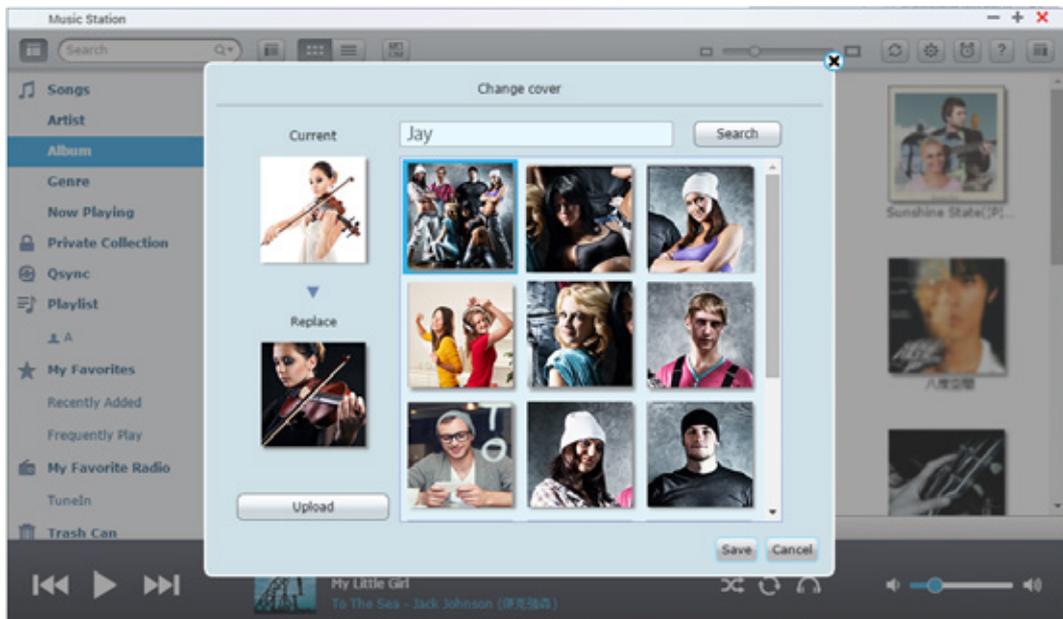

Music Station enables you to play music stored on your PC and your mobile devices over the Internet, acting as your personal music cloud. Enjoy your entire music library on any device, anytime, anywhere.

Go social with your music

Simply choose the music you want to share, and share it on Facebook™, Twitter™, your favourite instant messengers, or simply email a link.

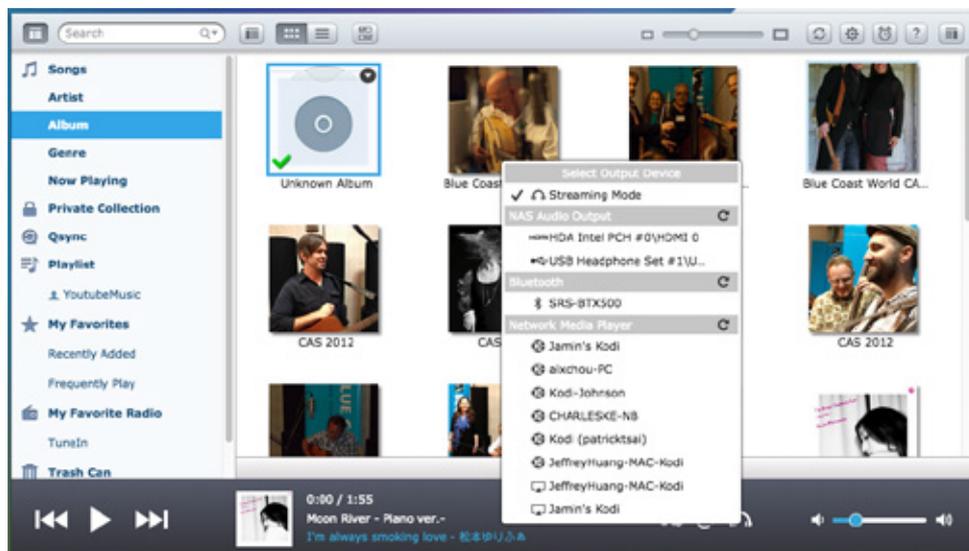

Custom album covers

Music Station will automatically gather album art, and metadata from the Internet (genre, artist, release date, etc.) to enrich your music library and listening experience. Alternatively, import your own image to use as the album cover, for example a holiday picture you associate with a certain track.

Play your music on any device

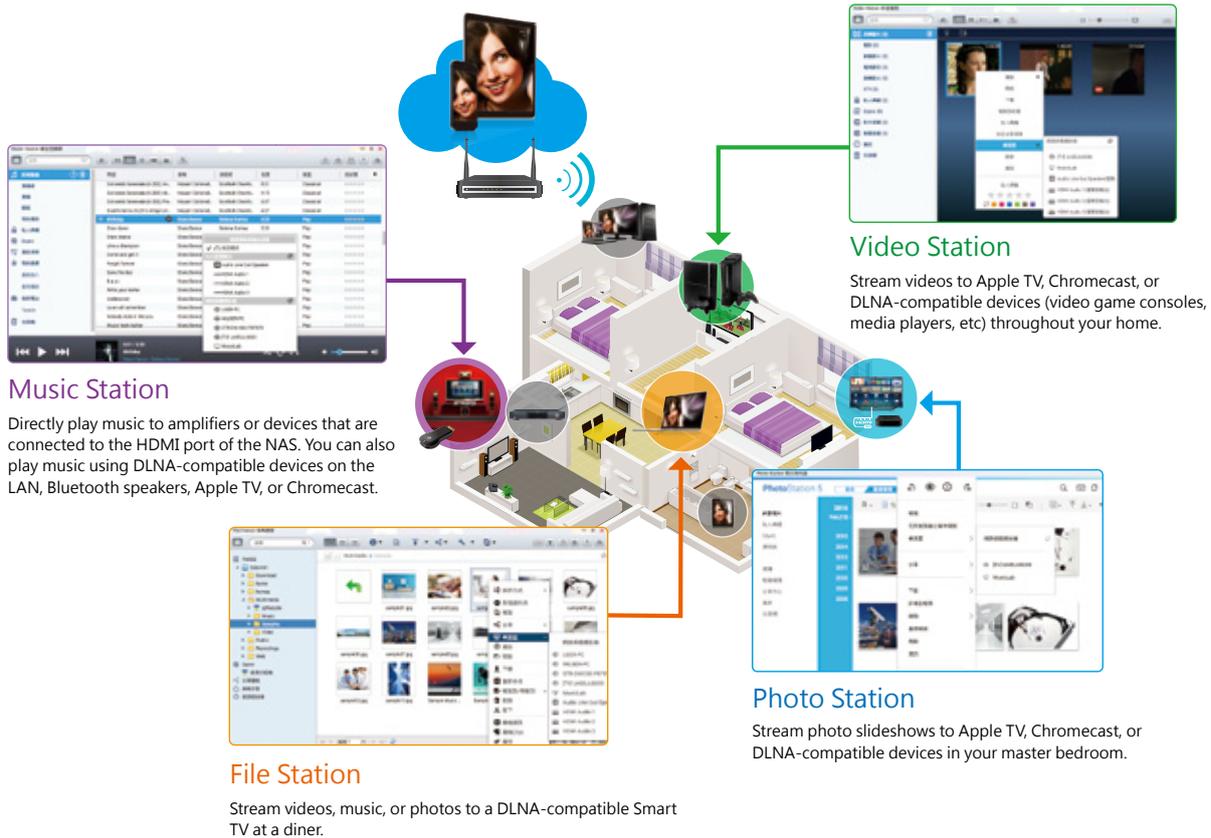

Music Station is able to stream to many different devices simultaneously using DLNA®, AirPlay®, Chromecast™, HDMI®, Bluetooth®, USB, and more. Simply click the headphones icon on the lower control, and send the music to your home amplifier, Apple TV®, Chromecast™, smart TV, Bluetooth® speakers, or USB speakers. Make your QNAP NAS the music hub for your friends and family.

One-to-multiple streaming playback Unleash your smart home theatre

QNAP NAS support multiple streaming playback modes, and protocols enabling users to stream media to several multimedia playback devices at the same time, easily.

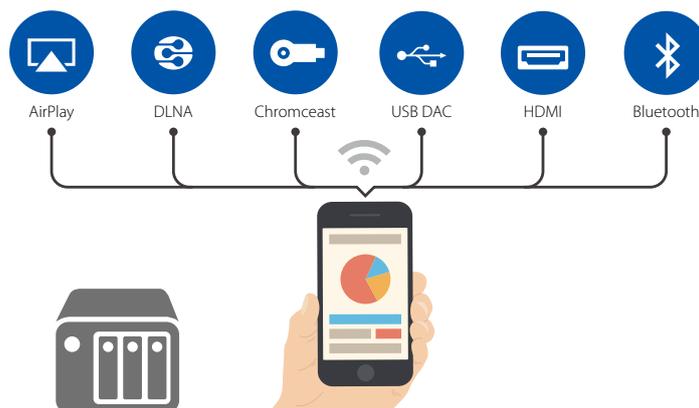

Multiple playback device support:

Photos and videos: DLNA®, AirPlay®, and Chromecast™ devices.

Music: Bluetooth® and USB speakers.

Use the browser-based File Station, Music Station, Photo Station. or Video Station to directly playback a variety of multimedia, or stream the media using the stations to a wide variety of devices. Use your mobile device to control the media streaming.

The Media Streaming Add-On must first be installed from the App Center to your NAS.

Multimedia playback and control from your mobile device

Install a QNAP App to your iOS®, Android™ or Windows Phone® device enables you to access and enjoy everything stored on your QNAP NAS easily. Use Qfile, Qphoto, Qmusic, and Qvideo to remotely control multimedia files to be streamed to your selected DLNA® equipment, Apple TV® and Chromecast™ for playback.

Enjoy high-quality music with USB DAC

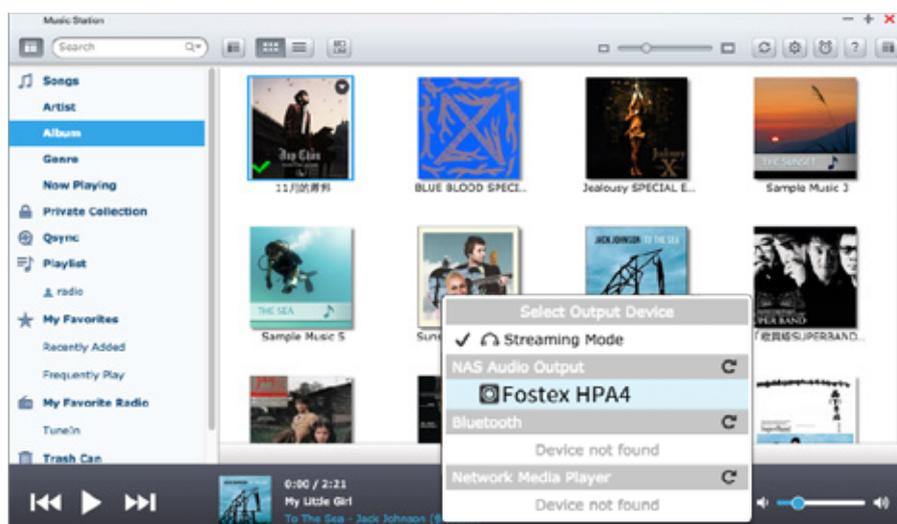

Example setup:

Instructions:

1. Connect Fostex® HP – A4 to NAS.
2. Open Music Station.
3. Select "NAS Audio Output" (as shown below) and then any music selected will be played through the Fostex® HP-A4.

➤ Install Qmusic and use your mobile devices to play music from your QNAP NAS to connected USB DAC devices.

HD Station 3.1

Use your QNAP NAS as a smart home theater

Simply plug an HDMI monitor into your NAS, and start playing media files from the NAS. QNAP NAS also support next-generation 4K displays* and streamlined installation via the HDMI output. This avoids the complicated settings of network media players and instability of network conditions, enabling a better viewing experience with large-screen TVs.

 Not all models support 4K display.

A wealth of apps

QNAP provide several native applications, and support a huge range of popular multimedia players (Kodi®, HD Player, Plex Home Theater®, DeaDBeeF, Clementine®, JRiver®), browsers (Chrome™, Firefox), and other multimedia streaming platforms (YouTube®, Spotify®, TuneIn Radio®) to provide you with a comprehensive smart home theatre.

Qremote control, simple and convenient

Control your HD Station from your mobile devices using the QNAP exclusive Qremote app. Qremote offers four modes: application shortcuts, simple remote control, touch screen, or keyboard mode to enter text. Use your smart phone or other mobile device to download the Qremote App from the App Store or Google Play® Store.

Multilingual input and improved multitasking

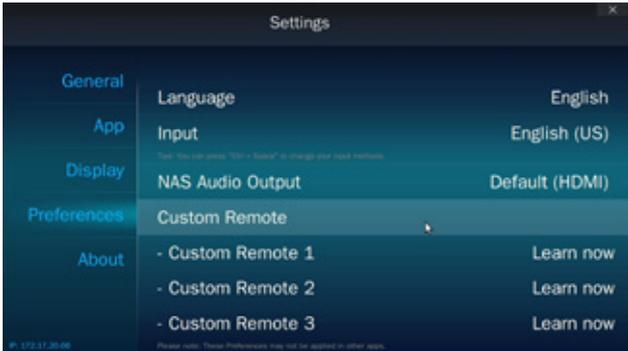

HD Station 3 supports multi-lingual input, enabling you to search from a web browser in your native language. Additionally, HD Station 3 now supports multitasking with a desktop PC-like taskbar enabling you to switch between different applications.

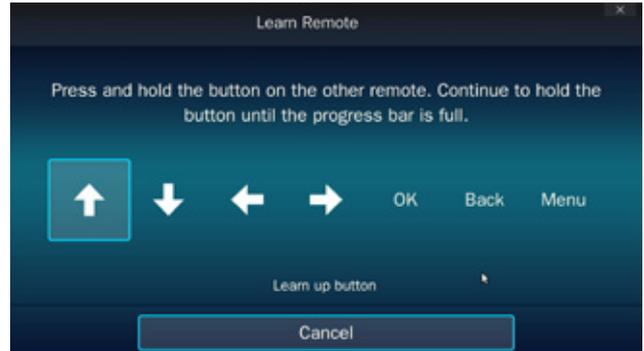

Custom Remote – Use your existing IR remote controls with HD Station

HD Station supports remote control learning enabling you to use your existing IR remote controls with HD Station. Matching your existing remote control with HD Station only requires two steps, and helps reduce clutter in your living room.

1. Enter "Settings"> "Preferences" in HD Station. Find "Custom Remote" and select a slot for the new remote control.

2. Follow the on-screen instructions and press and hold the button you want to match. Hold the button until the progress bar is complete.

System requirements

- HD Station 3.1.1 or later
- Supports TS-x53A series NAS
- Supports up to 3 simultaneous custom remote controls
- Some IR remote controls are not supported

JRiver® Media Center - Powerful media management

JRiver Media Center is a jukebox style multimedia player capable of managing several large media libraries within the same domain. JRiver® Media Center supports a variety of multimedia streaming formats and multi-room streaming, and is capable of indexing album covers for a variety of metadata to provide efficient multimedia management. Additionally, JRiver® Media Center also supports a number of professional music processing features such as an equalizer, rhythm, pitch, and sampling rate to further meet the needs of video enthusiasts and significantly enhance your QNAP NAS multimedia streaming experience. For more information, please refer to <http://www.jriver.com/>

OceanKTV

Enjoy karaoke in the privacy of your home

QNAP are proud to announce another pioneering and innovative breakthrough. QNAP introduce the first NAS based Karaoke TV system - OceanKTV. Simply attach a TV to your QNAP NAS HDMI output and you have an in-home Karaoke system that will be popular among adults and children alike.

Select your songs in advance from your personal songbook

OceanKTV Song Library Management makes adding your favorite songs into your personal songbook quick and easy. Connect to the NAS through your browser and use the "My Favorite Songbook" to create playlists for all your favorite songs to ensure you have the perfect songs for every occasion.

Wonderful themes complement a sublime user experience

OceanKTV employs the most advanced UI/UX design from QNAP. QNAP hired Karaoke specialists to consultant on this project with the aim providing the ultimate Karaoke experience. Simply, choose from the four modern themes and vary the background theme according to the mood of the song. Then, sing your heart out!

Go to "QTS" > "App Center" and search for "OceanKTV" and install. OceanKTV runs on HybridDesk Station. After finishing NAS basic setup, go to "Control Panel" > "Applications" > "HybridDeskStation", and follow the installation instructions.

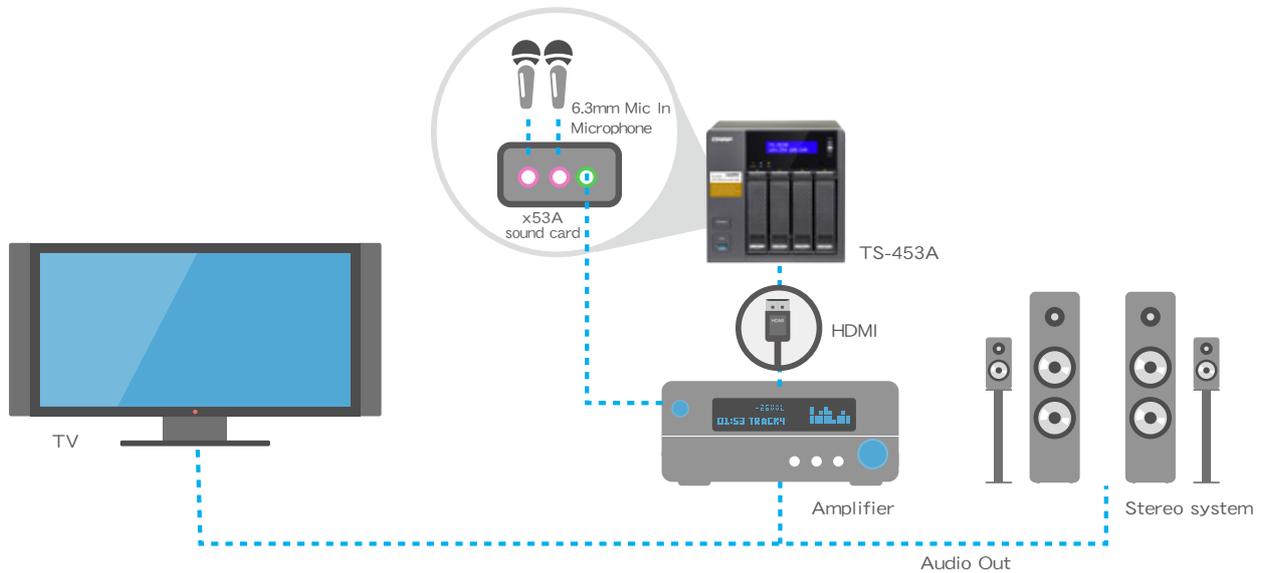

Minimum NAS requirements: An HDMI port with at least 4GB Memory, built-in sound card or external USB mixer.

A dynamic microphone is required

Convenient, affordable, smart home entertainment with an HDMI screen

QNAP NAS with HDMI outputs have proven to be very popular among home users. Simply connect a TV to your NAS HDMI output to enjoy the massive amount of multimedia content stored on your NAS. It could not be easier! Run the integrated Karaoke TV on HybridDesk Station and enjoy free Karaoke TV. You're now ready to invite your friends over for the ultimate Karaoke experience on your QNAP NAS!

Use your mobile device as a remote control

OceanKTV is compatible with both iOS and Android, enabling you to control OceanKTV from your mobile devices. Just connect your mobile phone or tablet to the same network as your NAS, and download OceanKTV for iOS or Android from the app store. Then simply log into your NAS and get the party going. All basic Karaoke features, such as enabling the singing guide, echo, song change, volume adjustment, pause, and even sound effects, are readily accessible on your mobile device.

 To download the OceanKTV app: iOS users - go to "App Store", and search/download "OceanKTV"; Android users - go to "Google Play Store", and search/download "OceanKTV".

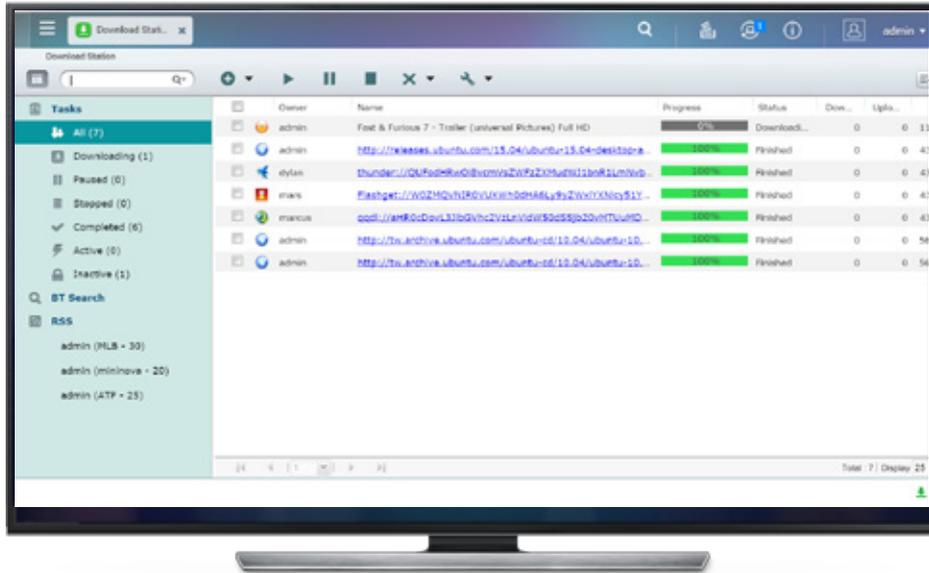

Download Station 4.2

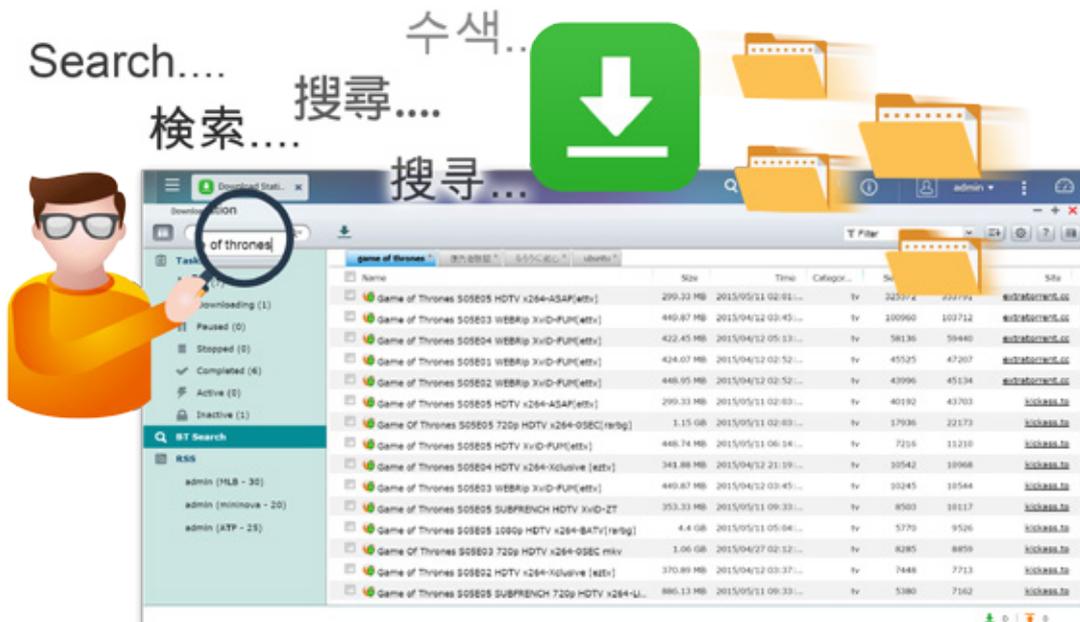

Your 24/7 download center

Once you finish managing download tasks, just turn off your computer. Your download tasks will keep going until they are finished. Easy, and power-saving.

Built-in search engine with multi-language support for BitTorrent® sites

Download Station has a built-in torrent search engine and supports searching BitTorrent® sites in a number of languages. This saves you the trouble searching for BitTorrent® seeds on the Internet enabling you to search for files from Download Station.

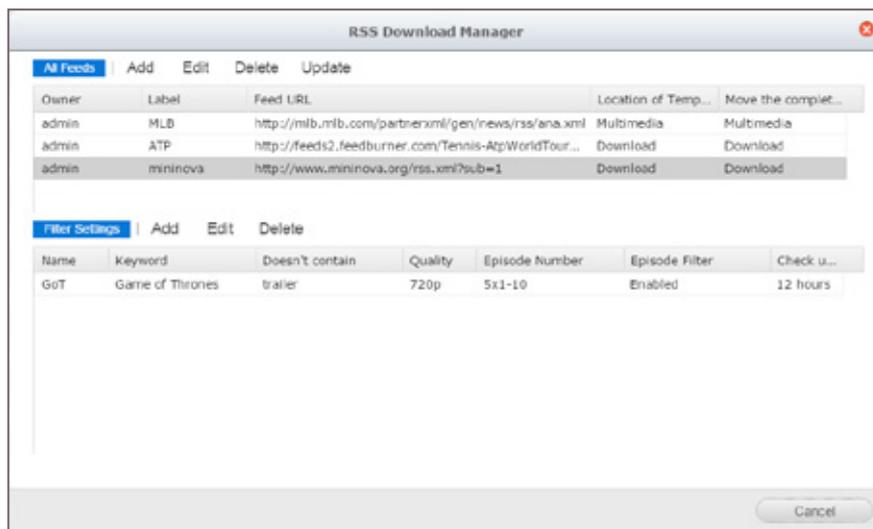

Wide range of download protocols

Full support for HTTP/HTTPS, FTP/FTPS, BitTorrent®, PT*, Magnet Xunlei®, FlashGet®, qqdl, and Baidu® Cloud downloads.

➤ For PT downloads, supported client applications vary based on PT sites. If Download Station (libtorrent) is not in the client application list recommended by your PT sites, please search for an alternative one (ex. Transmission™) in the App Center.

RSS subscription and automatic download

Download Station fully supports downloading via RSS feeds with filter and criteria settings. Subscribe to an RSS feed and Download Station will automatically download the content for you.

Multiple user downloading

QNAP NAS administrators are able to grant the access to Download Station to NAS users*, enabling friends and family members to enjoy the convenience brought by Download Station.

➤ Grant application privileges for Download Station to users in "Control Panel" > "Users" > "Actions" > "Edit Application Privilege".

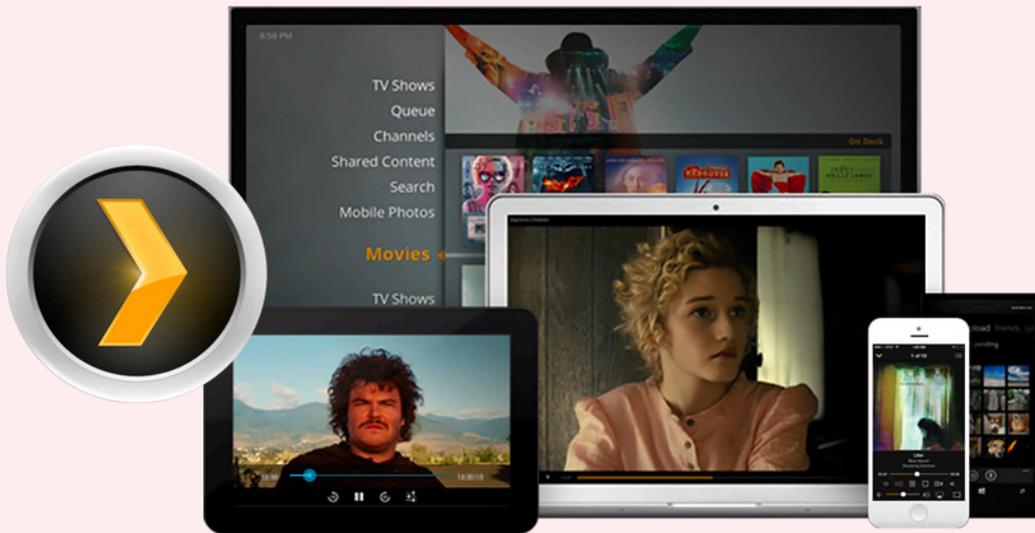

Online download settings and scheduling management

Set the download/upload speed limits with a flexible download schedule, enabling you to optimize your bandwidth distribution.

Plex Media Server – professional media server

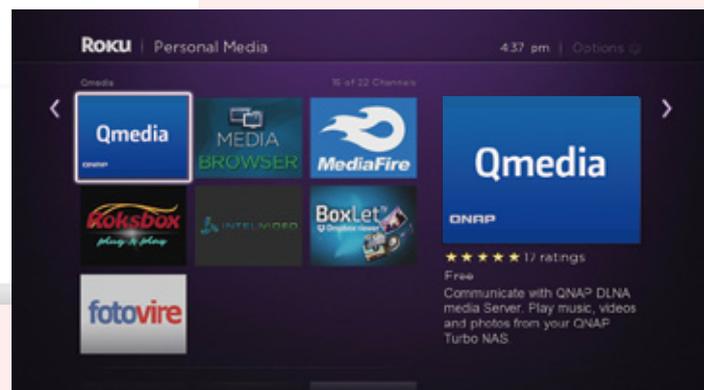

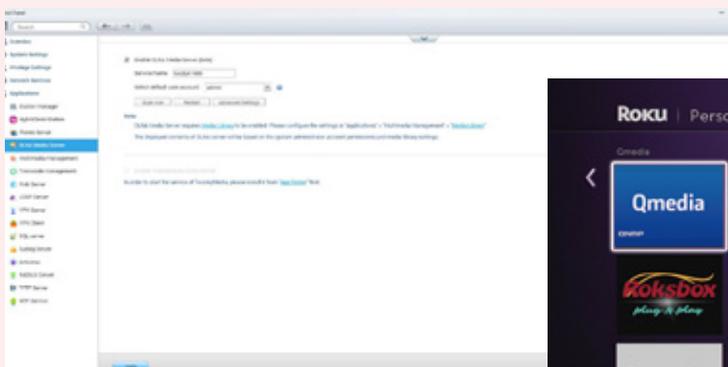

Plex is a well-known media server and media center application. Video streaming is made easy with Plex Media Server. Use Plex Media Server to enjoy easy management and instant playback of all your media on your NAS wherever you are. Plex apps for Android, iOS, Windows, and Windows Phone enable you to browse and enjoy your media on your choice of device. Plex Media Theater can display your media via an HDMI output or via a stream to Plex mobile app clients, on the same machine, the local area network, or over the Internet. Configure Plex Media Server to index and transcode content on your NAS to reduce bandwidth and increase playback device compatibility. Plex enables extensibility through plug-ins. Download and install Plex Media Server from the App Center. For more about Plex Media Server, visit <https://plex.tv>

Qmedia - a player designed for Roku®

Qmedia is a customized channel for Roku®, which enables you to browse and play the media stored on your NAS via Roku. Qmedia enables users to easily stream photos, music, and videos from a QNAP NAS to a TV. With full support for on-the-fly transcoding on your NAS, users are able to transcode media files to formats that can be streamed by Roku. Improve transcoding performance by installing CodexPack if your NAS supports hardware acceleration.

Roku uses DLNA to retrieve media from the NAS. To enable the QNAP DLNA Media Server go to "Control Panel" > "Application" > "DLNA Media Server" and check "Enable DLNA Media Server". Then add the Qmedia channel on your Roku. Search for it on the menu or go to "Streaming Channels" > "Personal Media" to find Qmedia and add it to your Roku. Now you can enjoy media content streamed from QNAP NAS on your TV.

Productivity Tools

Maximize the value of your QNAP NAS

To enhance the value of your QNAP NAS, we constantly improve the capability and management services of the NAS to assist you in managing multiple QNAP NAS. In addition, we innovate a wide range of apps to enable you to utilize the services on the NAS too boost your productivity, making your NAS a secure and highly accessible center for your data.

Cloud access service – myQNAPcloud 2.0

myQNAPcloud Offers an easy-to-use management interface, enabling you to check online information of multiple QNAP NAS. Operating through the browser, you can download move, copy and share files via QNAP NAS.

Data synchronization – Qsync Central Station 2.0

Qsync provides you with the unlimited ability to synchronize and share files across multiple devices, free of charge.

NAS central management system – Q'center 1.1

Using the summary charts and other visual reporting tools on the Q'center server, enables easy management of disk capacity, viewing of system health statuses and configuration of settings on multiple QNAP NAS units.

The ultimate advertising tool – Signage Station 2.1

Signage Station can easily create and deploy attractive and engaging multimedia signs and ads.

Centralized mail service – QmailAgent 1.0 Beta

QmailAgent supports different email accounts to enable central management of all of your email services. It also supports SSL encryption in mail retrieval to enhance data privacy and security.

IPMI remote management – QRM+ Beta

QRM+™ is a centralized remote server management solution designed for IT administrators.

Notetaking with cloud-based services – Notes Station 2.0

One workspace for all your writing activities. Quickly compile meeting minutes and marketing reports and collaborate and share in real-time with anyone in the world.

NAS search engine – Qsirch2.2

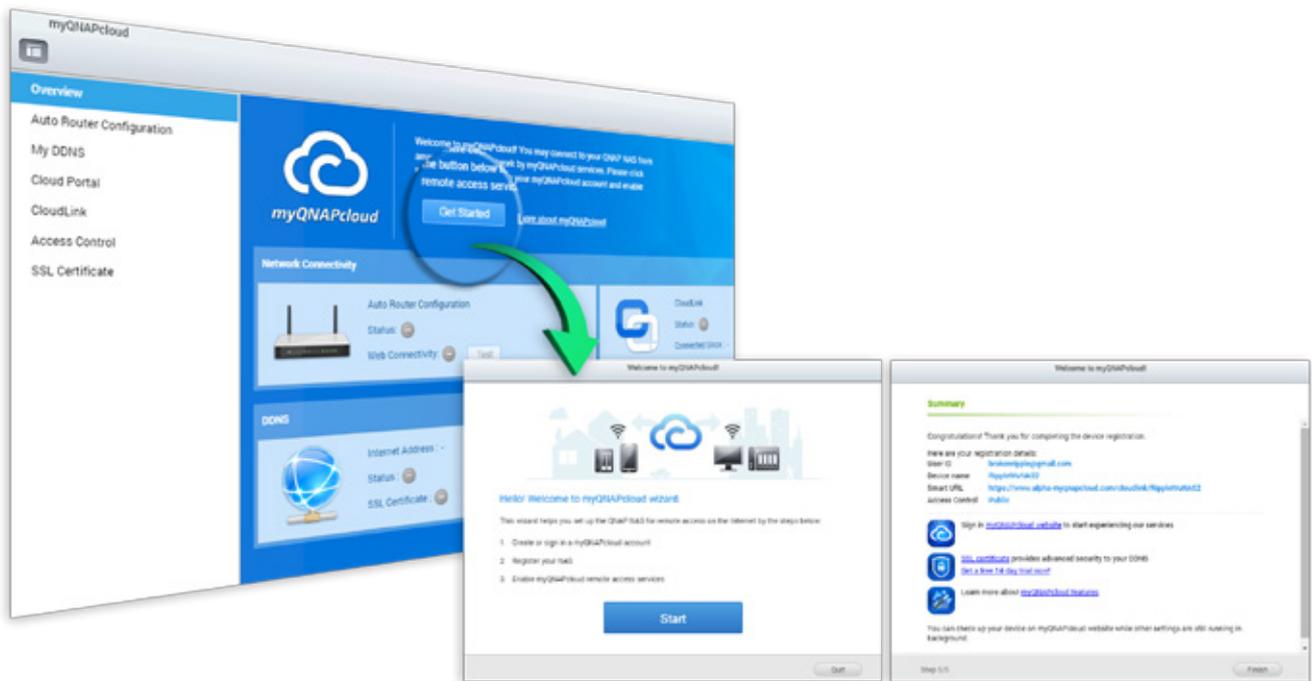

Qsirch is a full-text, domain-wide search tool. With a single keyword, Qsirch can help you locate relevant files or content on a NAS. Qsirch enables users to search while typing and sort through files faster and more precisely.

myQNAPcloud 2.0 cloud access service Helps you easily create your NAS cloud

Cloud access is greatly simplified in QTS 4.2.2. Follow the setup wizard and effortlessly create a personal, private cloud. Use myQNAPcloud 2.0 to enable access to the services of your QNAP NAS safely and conveniently.

 Just follow the wizard's instructions to set up cloud access.

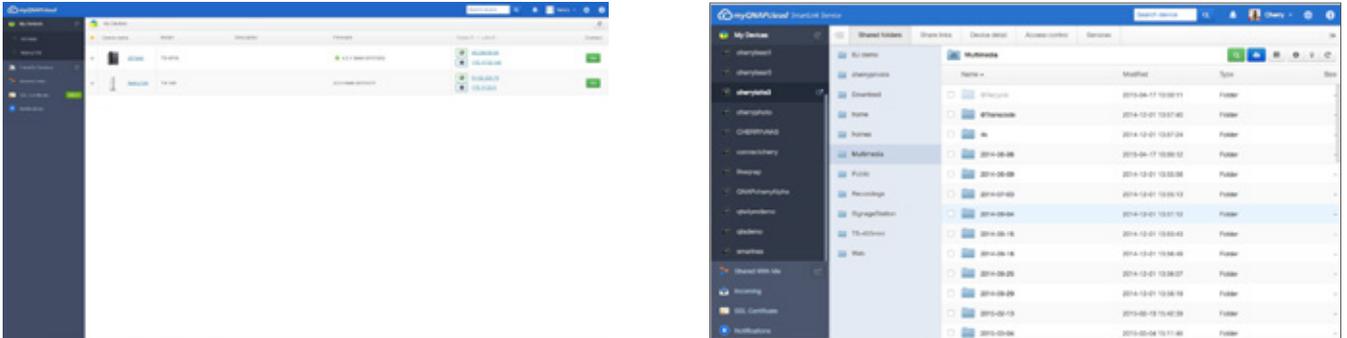

myQNAPcloud ID (QID)

Start the myQNAPcloud App in QTS 4.2.2 for the first time and the myQNAPcloud wizard will help you register a QID. Use your unique QID to securely access your NAS, mobile Apps, or the PC utility Qsync. Further, securely share with colleagues, family, and friends by signing into your myQNAPcloud portal (www.myqnapcloud.com), with your "QID".

 To use the services described in the following page, please first activate the cloud services using the myQNAPcloud wizard.

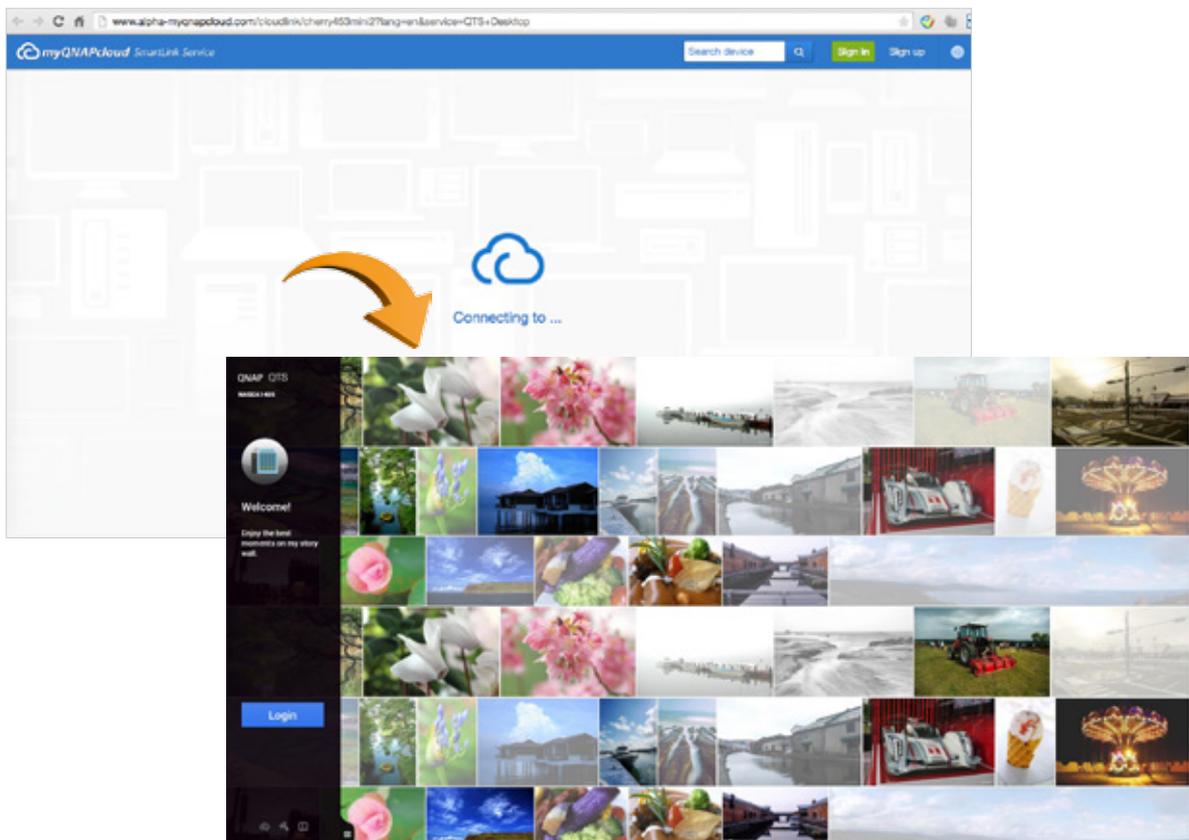

Manage files and multiple NAS devices from your web browser

The myQNAPcloud web portal (www.myqnapcloud.com) is a user-friendly interface that enables you to check available and connected NAS servers. Download, move, copy and share files stored on your QNAP NAS with your web browser and enjoy the convenience of accessing multiple NAS servers from a central Internet portal.

CloudLink

CloudLink is the remote access service provided by myQNAPcloud and enables you to connect to your device via the Internet using the myQNAPcloud website (www.myqnapcloud.com). No complicated port forwarding settings on the router are required: just sign in using your myQNAPcloud ID (QID). Then access files from the myQNAPcloud website. CloudLink will automatically select the best connection for you according to your network environment. In addition to the web-based connection, CloudLink also enables you to connect to your QNAP device with the QNAP mobile apps Qfile and Qmanager as well as the PC utility Qsync. CloudLink greatly simplifies remote connectivity.

QID access control

To enhance remote access flexibility, set access privileges for published services in myQNAPcloud in QTS 4.2.2 or the myQNAPcloud website:

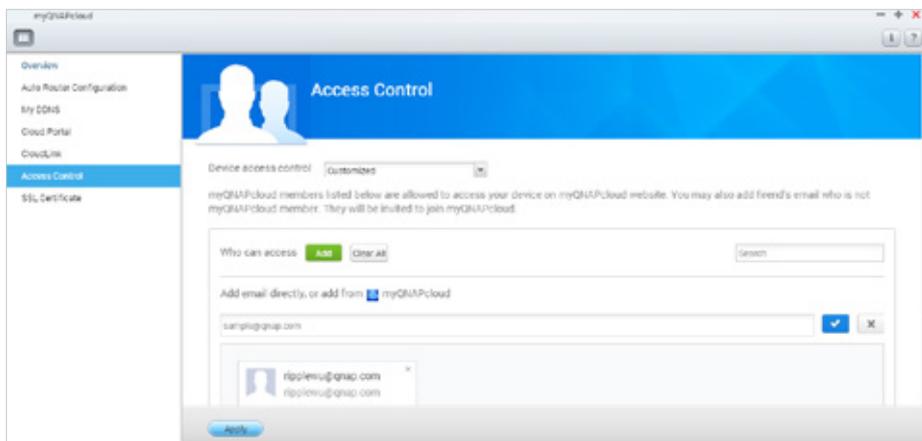

Public: Everyone is able search for your device on the myQNAPcloud website and access your public services.

Private: Only you are able to access your QNAP NAS remotely on the myQNAPcloud website or with mobile apps via the CloudLink service.

Customized: Specify who is able to access your device on myQNAPcloud website or with mobile apps by entering their registered accounts. Alternatively, add the email addresses of your friends who are not currently members of myQNAPcloud to send them an automated invitation message.

Secured data storage and access

myQNAPcloud supports SSL 2048-bit online encryption to strengthen data security during transmission, ensuring your peace of mind.

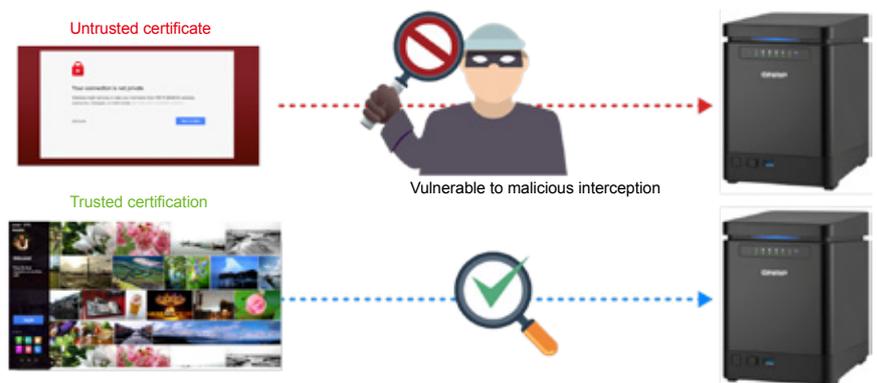

myQNAPcloud SSL authentication

myQNAPcloud SSL certificates are used to provide a secure connection between your QNAP NAS and web browsers, providing authorization in addition to encrypting the connection to secure both data and transactions.

The advantages of myQNAPcloud SSL authentication

Upon purchasing and installing a myQNAPcloud SSL certificate, you are able to rest assured that the web page you are connecting to is genuine when using DDNS to access a QNAP NAS.

Without a myQNAPcloud SSL authentication the browser will display a security alert. You are not able to ensure that the NAS you are trying to connect to is genuine, running the risk of data transmission being intercepted.

Please go to the myQNAPcloud website and log in using myQNAPcloud ID to purchase it, where the QTS installation authentication is on this webpage. myQNAPcloud SSL authentication is only available when used with QTS 4.2 or newer version.

Qsync Central Station 2.0

Centrally manage and sync your files and devices

Large volumes of data are transmitted and used by businesses and between departments on a daily basis. While public cloud services like Dropbox™ can fulfill easy sync and sharing needs, their low data allowances and potential security and ownership issues can leave a lot to be desired. With Qsync, QNAP provides a complete file sync solution that allows businesses and organizations to ensure that team members always have the most up-to-date files for greater working efficiency.

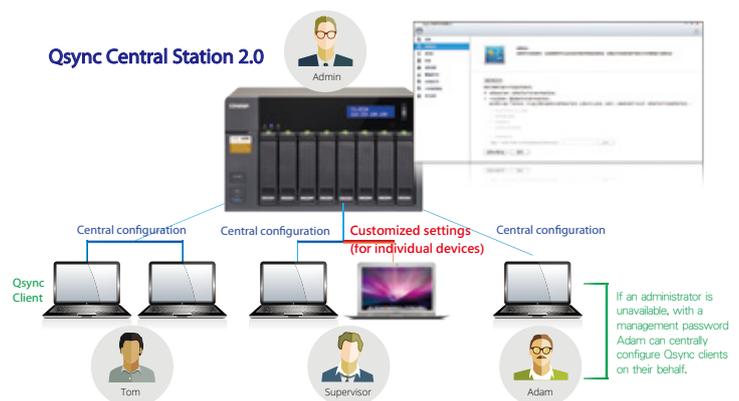

Synchronization as a better file management and collaboration approach

Qsync Central Station 2.0 synchronizes files between multiple devices. Use a mobile device, computer, or the web to browse synchronized files. If a computer is offline, users are able to edit the files offline, or view the files on the local Qsync folder. When the network resumes, Qsync will resume the data synchronization. Optionally, choose to keep files stored on your QNAP NAS un-deleted to save the storage space of your local device.

Enhance management efficiency by monitoring equipment settings

Administrators are able to create default settings on Qsync Central Station 2.0 and apply them to Qsync clients, which saves time and effort setting up individual clients. Administrators are also able to monitor user settings, strengthening enterprise-wide IT management and file filtering control. This mitigates the risk of deleting files on a QNAP NAS by mistake due to synchronization. Also, by using permission settings, administrators can flexibly adjust individual user's equipment settings, where it retains the above advantages, and further enhances the flexibility and convenience of the centralized management approach.

Shared folder synchronization and seamless file sharing for teams

Synchronize any shared folders on your QNAP NAS to the Qsync client on your computer, or mobile devices. Enable synchronization among multiple shared folders on the NAS on a team or project basis for truly convenient remote collaboration.

Share team folders to improve collaborative and teamwork efficiency

Qsync Central Station 2.0 supports sharing team folders to improve work efficiency, making teamwork simpler and easier. Deploying a private cloud synchronization solution on an intranet can help to ensure security of data storage, and Version Control effectively solves file conflicts or accidental deletion.

Remotely delete shared folders to prevent data leaks

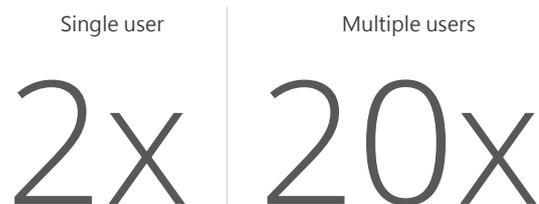

In the event of a computer/device being stolen or lost, the Qsync folder can be remotely erased* to ensure that sensitive or confidential data is not accessed by unauthorized users or leaked. Once the computer/device is recovered, Qsync can easily restore the data that was deleted, ensuring the perfect balance between security and convenience.

 The data will still be retained on the QNAP NAS.

Enhanced database and algorithms for increased performance

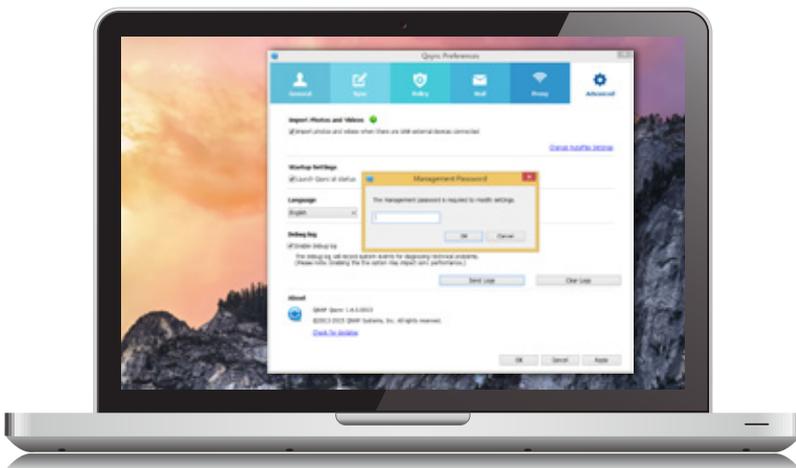

QTS 4.2.2 features a brand-new underlying database and refined algorithms are incorporated into Qsync Central Station 2.0 to greatly improve overall performance reducing burden on the NAS computers/devices using it.

When accessed by a single user, Qsync Central Station 2.0 almost doubles its upload efficiency. With 20 users, the upload efficiency further increases by nearly 20 times. These performance improvements assist in maximizing a team's collaborative efficiency and minimize synchronization waiting times.

An array of user settings to choose from

Qsync Client's easy-to-use interface is very user-friendly and comes with a number of handy and practical features (i.e. sharing files through the computer's mail server, connection test, help center.) With Qsync Client, managing all tasks becomes a piece of cake.

Qsync Smart Version Control

Enable Qsync version control and all file revisions (up to 64 versions) are saved as a copy for future retrieval. In the event of accidental deletion or unintended modification, previous versions always remain available, even files that have been deleted from the recycle bin.

The Qsync utility

The Qsync utility automatically synchronizes files between your computer, server, and mobile devices saving you time from copying files manually.

Available for Windows® and Mac.

Share team folders with different groups of people

Qsync enables you to create and share many folders. Create a main folder then create sub-folders for different groups of people, family friends, project1, etc.

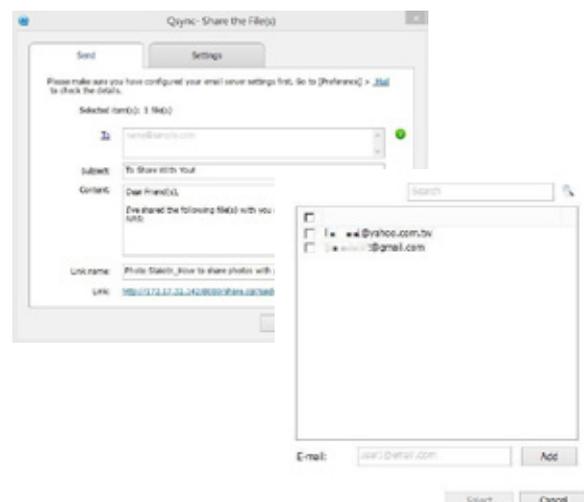

Sync selective sub-folders

Choose to sync specific folders or sub-folders, saving bandwidth and storage on target devices.

Streamlined file sharing with previous contacts

Qsync has been updated to save and display contact details from previous file sharing occasions. As such, when you share a new file the process of sharing a file is simpler and more streamlined without having to look-up and enter contact information.

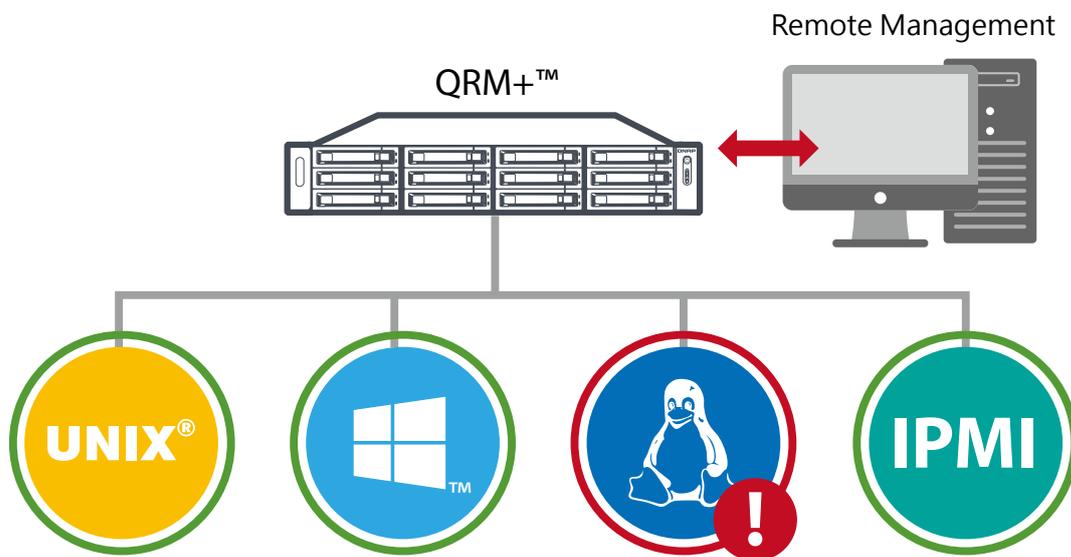

QRM+™ Beta

Unified remote server management solution

QRM+™ is QNAP's Centralized Remote Server Management solution designed for IT Teams. QRM+™ Monitors and controls the pulse/health of all the mission critical servers in your network. QRM+™ provides a single point solution to discover, map, monitor, and manage all the critical computing devices (servers/PCs/thin clients etc.) in your network. Manage your servers and multiple clients from inside or outside of the same network.

Key benefits

- Increases an IT department's visibility of the health of mission critical servers.
- Discovers, maps, monitors, and controls computing resources on your network from a single platform.
- Centralized web-based solution.
- Supports both Agent-based (QRM+Agent) and Agentless(IPMI) monitoring. Supports IPMI 2.0
- Keeps track of all mission-critical device settings and provides state of art alert/event management.
- Helps analyze the performance of network resources.
- Supports multiple platforms including Windows® and Linux™ with QNAP's QRM+Agent- A lightweight remote management agent
- Fast, easy implementation and maintenance reducing trouble shooting time. Helps bring systems up quickly.
- Reduces system administration and operation costs and maximizes an IT department's productivity.
- Increases system availability by identifying problems early.

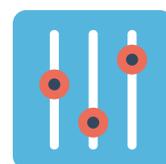

Discover

Map

Monitor

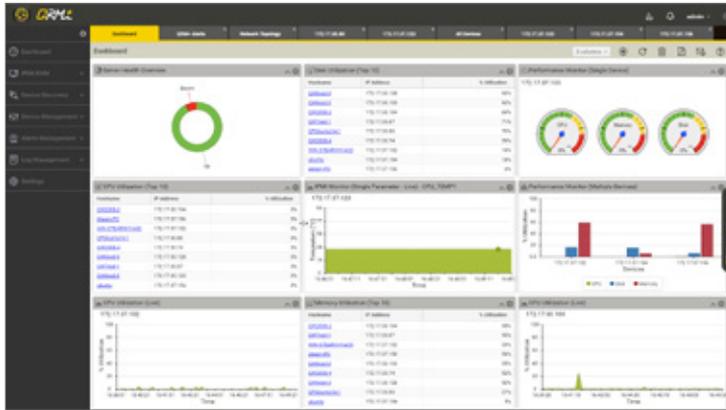

Control

Customizable dashboards

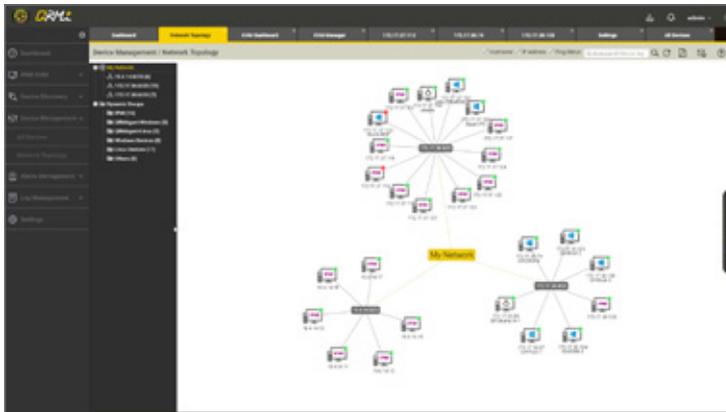

QRM+™ has customizable dashboards offering useful, timely, consistently presented information that aid in efficient decision-making for IT administrators.

Multiple graphic and informative widgets make system monitoring simple. Quicker single-point access across your entire infrastructure removes the time-wasting friction of several web-browser tabs and multiple interfaces enabling you to seamlessly monitor and manage your devices.

Device discovery and topology

QRM+™ identifies all the devices on your network including routers, switches, printers, servers, workstations, and mobile devices. Discover all the devices on your network using an IP Range scan. QRM+™ maps discovered devices into a network topology. Network maps are a powerful trouble shooting tool that assist you in visualizing your networks and quickly isolating the root cause of a problem.

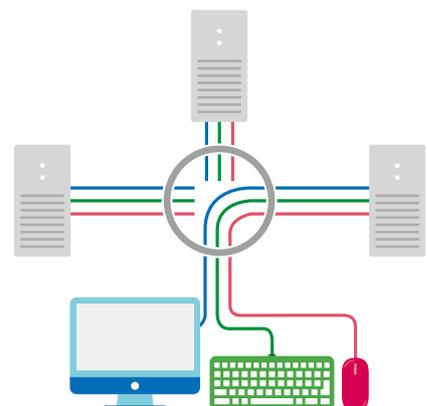

Web-based management

QRM+™ is a centralized, web-based solution accessible to your IT administrators from any web browser. QRM+™ supports monitoring multiple components in your system, including CPU, memory and disk utilization, CPU temperature, CPU Fan speed, and many more. This gives complete visibility of all mission critical computing devices.

Remote KVM solution for IPMI

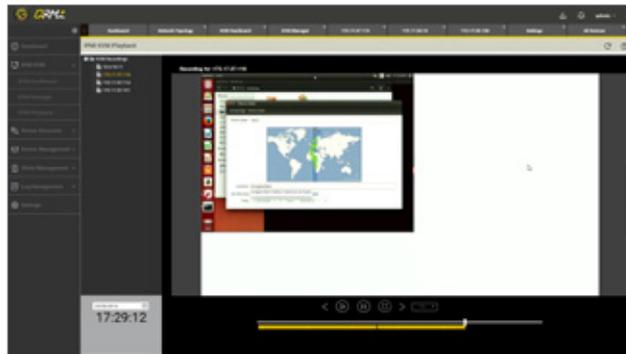

The QNAP proprietary KVM Proxy solution for IPMI compatible servers enables you to remotely control a server even if the server is turned off or in BIOS mode. QRM+™ KVM solution supports multichannel access enabling more than one client to connect to the remote server using KVM at the same time. QRM+™ supports Remote desktop for non-IPMI devices based on noVNC technology. QRM+™ also supports remote SSH.

 Remote KVM over IP in Browser.

Remote KVM Recording and Playback

Enable KVM recording and all the KVM data will be recorded in video format to the NAS. This enables playback of the recording based on Date and Time to track specific events. This provides a unique way for administrators to log each action taken on server improving security.

Alarms and Notifications

Use QRM+™ Alerts and Notifications detailed telemetry to receive rich, frequent, monitoring and diagnostics data about your resources. QRM+™ Alerts and Notifications enable IT departments to deploy an intelligent management system to monitor the health, performance, availability, and usage of services. This monitoring and control reduces maintenance costs through early detection, triage, and diagnosis of issues before they happen.

Security

- Mission-critical servers and computing resources require extra security considerations. QRM+™ fully supports:
- Two-Step Authentication: 2-step verification enhances the security of user accounts. Once enabled, users will need to enter a one-time security code (6 digits) in addition to your password whenever you sign in to QRM+™.
- Role based user management (Admin, Power User, Viewer): Easily manage and assign user access levels with user roles.
- SSL access: Access QRM+™ using SSL (Secured Socket Layer) to ensure secure network communications.

Log Management

QRM+™ is capable of logging device settings, alarm notifications, and IPMI events. This enables administrators to view current and historic data about each device. This analytical information enables an IT team to find resource utilization patterns, alert patterns and in turn make use of the relevant information for disaster mitigation and future capacity planning.

 To use QRM+™, please install Container Station and download QRM+™ from the QTS App Center.
Minimum system requirements: Intel® Core i5 processor and 4GB of memory.

QRMAgent

Developed by QNAP, QRMAgent is an agent that QRM+ installs on clients enabling QRM+ to perform monitoring and management. QRM+ server automatically installs QRMAgent when an administrator adds a device to be monitored. QRMAgent is available for manual installation if required.

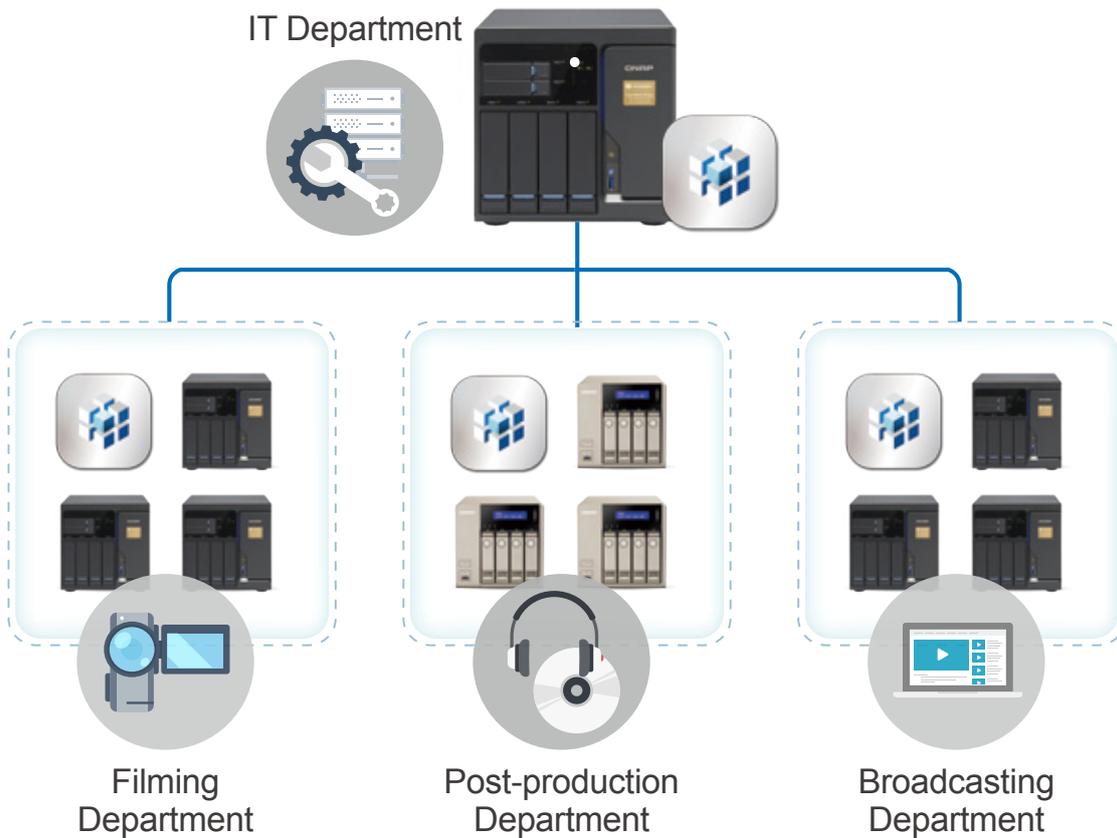

QRMAgent currently supports the following operating systems (more to be added later):

Platform	Operating System
1. x86 - Windows	Windows XP/7/Vista/8/8.1/10, Windows Server 2008/2012
2. AMD64 - Windows	Windows XP/7/Vista/8/8.1/10, Windows Server 2008/2012
3. X86 - Linux	Ubuntu 12.x/14.x/15.x

Q'center central management system Intuitive multi-NAS management GUI

Previously, IT administrators needed to log in to QNAP NAS units individually to check their status. The QNAP Q'center CMS (Central Management System) offers a platform to centrally manage multiple NAS units. The simple setup, cost effective, convenient and flexible approach that Q'center delivers greatly improves management efficiency for IT administrators.

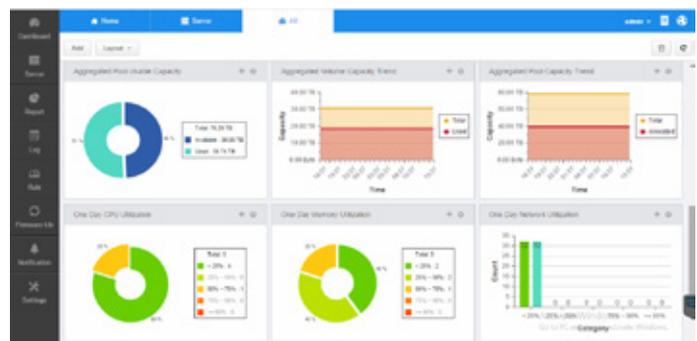

Powerful Monitoring Utility for IT Administrators

Q'center is a powerful QNAP NAS management tool enabling administrators to view status and system information of multiple NAS units at the same time from a Q'center Server. Simply install Q'center on a master NAS and set the other QNAP NAS units as managed stations. All information from the managed NAS is made available to be from the Q'center Server. Q'center greatly assists IT administrators and QNAP NAS users in system resource allocation and future capacity planning.

Central Management Platform

The "Dashboard" screen provides administrators with tools to conveniently inspect and monitor system status for all connected NAS units and enables you to efficiently review system logs of selected NAS units. Customize dashboards to get a quick overview of specific system information or statuses and alerts.

Visualized Statistics

Visualized statistics and messages enable you to rapidly gain a clear picture on the system status of all QNAP NAS units, including disk usage, shared folder space usage, HDD IOPS, HDD delays, and CPU usage for use as the basis of your system utilization trend analysis.

Centralized platform

Use Q'center as a centralized platform to enable network services and other settings on a specific NAS unit or on a group of NAS at once. Q'center is also able to act as a firmware repository to store historical firmware versions for a specific NAS or to schedule firmware updates for all NAS units, improving IT operations efficiency.

Manage QNAP NAS behind firewalls

The exclusive firewall traversal technology from QNAP enables Q'center to connect different QNAP NAS in different geographic locations and subnets. Use Q'center Agent to quickly establish connections between NAS clients and the Q'center server, saving the trouble of complicated router and VPN settings.

Q'center for VM

QNAP also offers a version of Q'center for VMware® and Windows® Hyper-V® enabling installation to a virtual machine without needing a QNAP NAS, adding flexibility to your setup choices.

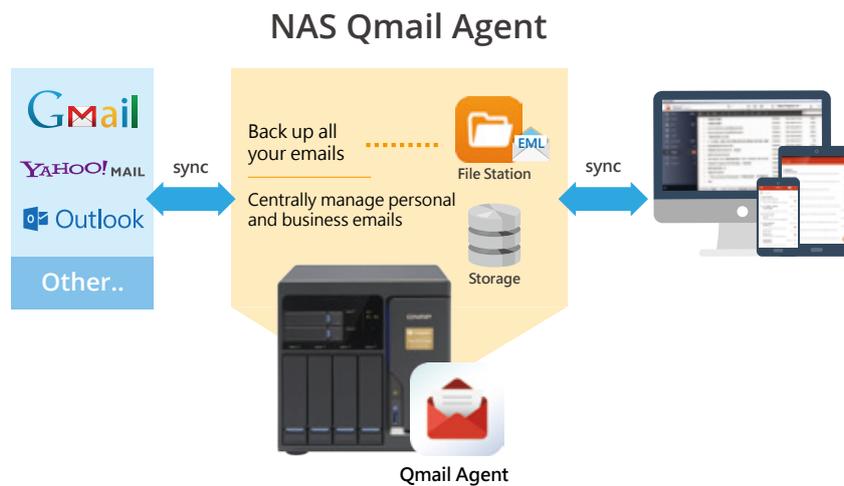

QmailAgent 1.0 Beta

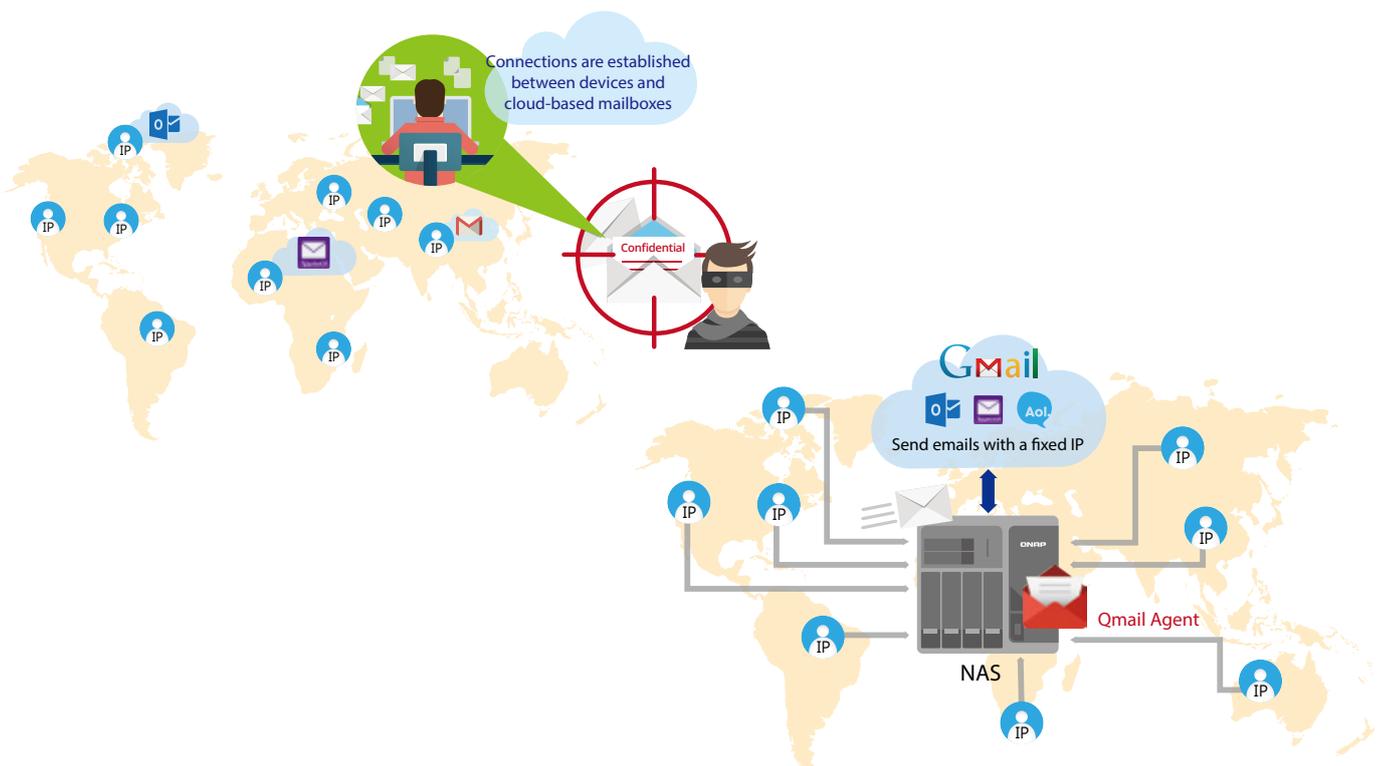

For all your NAS-based email operations

Easily manage your all of your accounts using the QmailAgent simple and intuitive interface. Add email accounts with customized settings on a per user basis. QmailAgent fully supports fast access to contacts, preferences, sorting, deleting, tagging and integrates a powerful search function.

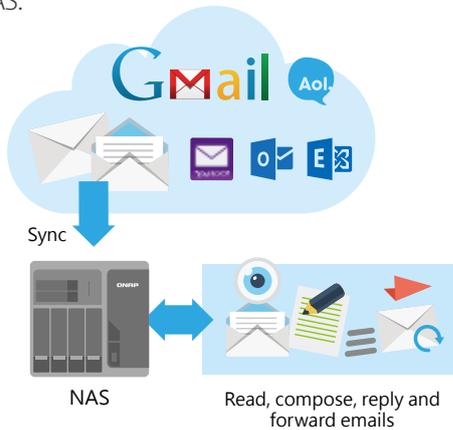

Protect your email access and your privacy

Email forms a central pillar of our communications, in both our personal and our private lives. Recent disclosures have shown us that communications online are increasingly targeted by a wide range of threat-actors. With this in mind QNAP introduces QmailAgent, an app developed to protect your email access and your privacy, in addition to helping you efficiently manage your email accounts. With QmailAgent, accessing your mail even in restricted environments is not only possible, but more secure.

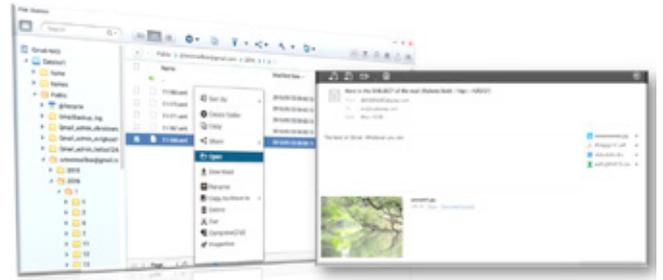

Backup your email to your NAS

QmailAgent enables automatic backup of your email to your NAS. Import your email account details and QmailAgent will start backing up your emails from your email accounts to your NAS. This centralization saves time, provides protection against accidental email deletion, neat chronological organization, and the unlimited storage of your NAS.

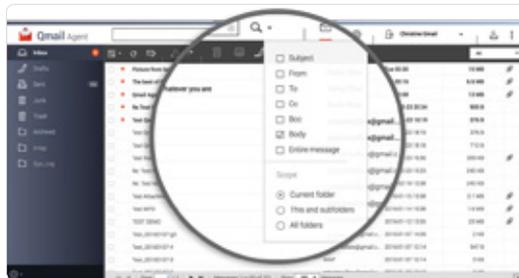

View emails stored in the NAS and on the cloud and mail servers

Previously, users needed to download emails to a local PC from the NAS before they could read or send emails. Now, you can directly read emails using QmailAgent or open archived emails in the NAS using File Station and easily read, edit, send, or receive them on the NAS.

Fastest and easiest approach to finding emails

When dealing with countless emails spread across multiple email accounts, it may be hard to find important messages. With QmailAgent's search criteria, you have a wide range of search criteria including subfolders, sender, receiver, subject, and more.

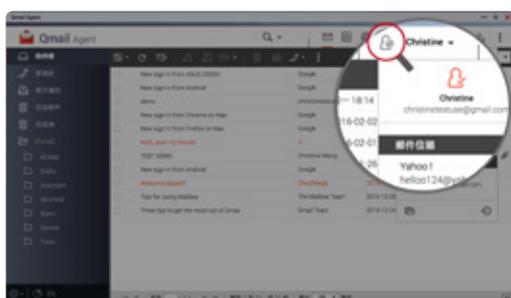

Conveniently attach files from the NAS

QmailAgent allows you to attach files, documents or photos stored on the QNAP NAS to the email. Likewise, the attachments you receive can be saved directly to the NAS for safekeeping.

Easily switch accounts

QmailAgent is an online mail client that allows users to access all of their email accounts and switch accounts easily. Whether it's Gmail, Outlook, Yahoo!, or other IMAP and POP3 mailbox services, QmailAgent supports them all. It provides complete functionality for composing, reading and organizing email messages. It can also attach files, photos and documents from the NAS and works with Gmail Backup to review archived emails.

Receive and send emails with your mobile devices through NAS

Download QmailClient (a companion app for iOS and Android devices) to enable mobile access to your emails via your NAS. Use QmailClient on your mobile device to display and cache new emails on your mobile device, and enabling you to read them even when an Internet connection is unavailable.

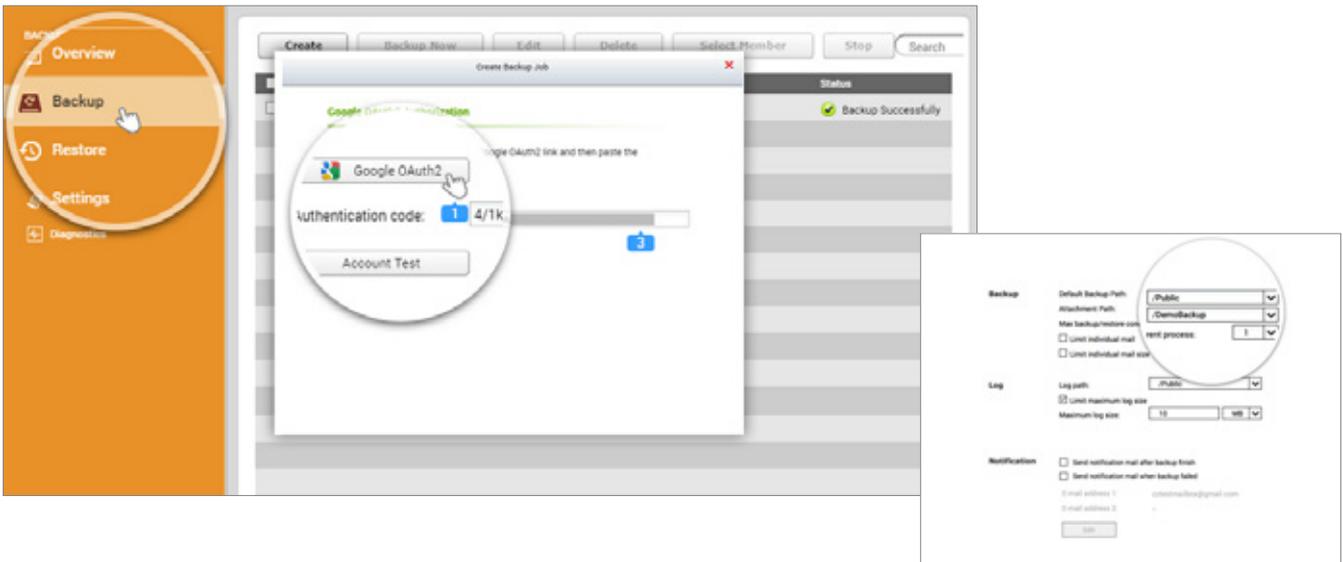

Gmail Backup 1.3

Dedicated storage for email backup

The QNAP Gmail Backup app provides Gmail backup and recovery functionality, enabling users to search and organize archived emails and attachments.

Complete email backup

Gmail Backup supports OAuth 2 authentication for individual and domain account email backup and migration. Configure a dedicated folder for each backup task for single or domain accounts and assist users in quickly backing up, searching, and managing their emails.

Efficient Gmail recovery

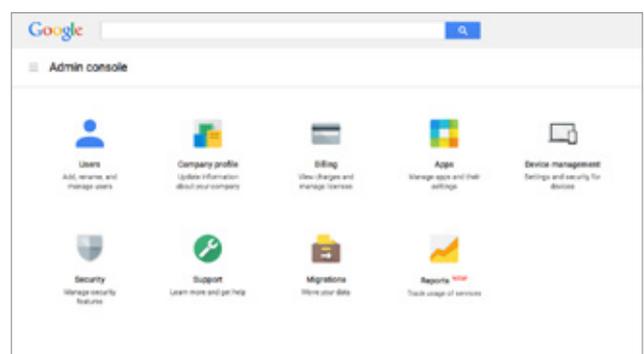

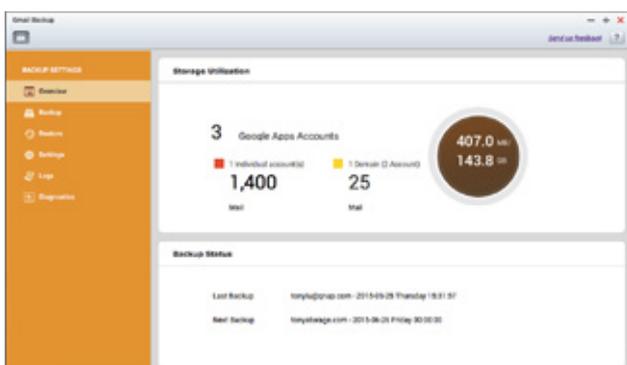

If emails are mistakenly deleted, the recovery function can restore them to their original email account without needing additional tools. Users are also able to choose to restore a specific email or all emails from an account.

Separately access and search attachments from an email

Back up attachments to a separate backup folder that can be designated when setting up an email account for better organization of archived data. Finding attachments can also be more efficient with Qsirch the QNAP exclusive NAS search utility.

Complete operation logging

Gmail Backup is capable of logging all of the activities and backup status for users to view their backup process in detail.

Notes Station 2.1

A handy notepad on your private cloud

QNAP has leveraged its private cloud functionalities to introduce Notes Station 2.1. It provides the convenience of notetaking on cloud-based services but with the privacy and security of QNAP NAS. Users do not have to worry about risks from public storage, and are able to enjoy easier data access at all times.

Single workspace for all notetaking activity

Jot your valuable ideas in Notes Station 2.1 and keep them safely accessible through your own devices wherever you are. With its 3-tier structure (Notes, Sections, and Notebook), Notes Station 2.1 enables you to manage all your notes systematically and flexibly whether it is a note you write to yourself or for work.

Powerful editing

Notes Station 2.1 fully supports rich text editing. Style your notes by changing the size, font, or color. Also, edit inserted images with the built-in photo editor to enrich your content.

Diverse backup styles

Notes Station 2.1 offers several backup options. Choose to back up files to your PC or NAS. Additionally, system administrators are able to use the backup features of the NAS to periodically and remotely replicate everyone's notes.

	Notes Station 1.0	Notes Station 2.1
Snapshots for version control		✓
Notebook backup	✓	✓
Full backup		✓
NAS to NAS backup		✓

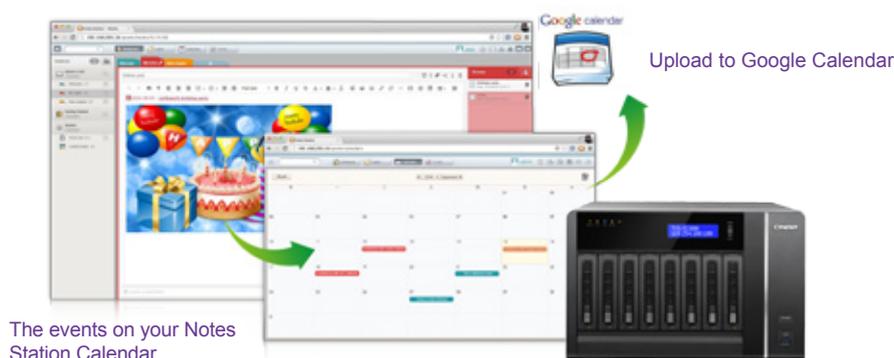

*Notebook backup: A user can choose to back up his or her notebook.

*Full backup: This feature is for administrators only. Administrators can back up notebooks for all users of the NAS.

*NAS to NAS backup: Administrators can back up notebooks to a different NAS for all users.

Google Calendar Support

An event in the Notes Station Calendar links to the note that created it. Update the calendar from Notes Station 2.1 to your Google Calendar with a single click, so you will be reminded for every event.

The events on your Notes Station Calendar

Industrial-encryption for your notes

Notes Station 2.1 secures your notes using standard AES 256-bit encryption. Encrypt your notes and rest easy knowing that only authorized users can access confidential and sensitive information.

Import & export PDF and epub files

Notes Station 2.1 enables you to directly import contents (such as comic books, eBooks, and scholarly articles) from PDF or epub files to assist in putting information together before editing, commenting, and marking. Existing notes on the Notes Station can also be exported as PDF or epub files for backup and sharing.

Some imported files may not be displayed as their original layout.

Preview attached files

Directly preview inserted documents (including PDF, Microsoft® Word, and PowerPoint® files) on Google Docs™ and Office Online™, and even play inserted multimedia files with the built-in media player without needing to download any files.

Subscribe to RSS live feeds

Notes Station 2.1 includes RSS support that helps gather subscribed online content from websites and blogs. All of the latest RSS contents are effortlessly centralized on the Notes Station for easy note-taking.

Restore notes to a previous version

Notes Station 2.1 features snapshots for version control, which can be used to retain different versions of notes at different time points. You can easily restore a note to a previous version whenever needed without worrying about frequent changes to notes.

Share notes for teamwork

Notes Station 2.1 helps communication and teamwork in your work and personal life. Create sharing links for your notes on social networks and messenger apps on mobile devices, or invite other users to read and edit notes for productive communication and teamwork.

Back up content from Evernote

Notes Station 2.1 supports backing up your notes from Evernote™, enabling you to directly import them from the Evernote™ public cloud to the secure private cloud provided by your QNAP NAS. Further edit these imported notes with Notes Station's powerful editing tools and easily share them with others.

Signage Station 2.1

The ultimate Do-It-Yourself signage solution

Signage Station is a free app for QNAP NAS. It enables businesses to create attractive menu boards, advertising posters and business profiles and easily publish them to monitors and tablet devices to attract more customers. Home users are able to edit and publish their own multimedia content. There are no complicated steps involved, and simple drag & drop operations create content and dynamic resumes with iArtist Lite and publishable your QNAP NAS.

Drive business growth and increase revenue

Your content can be presented on a web browser and when on the go, and you can even show your profile, business card and product catalogs on mobile devices and share on Facebook. A QNAP NAS with Signage Station is the ideal tool to present creativity and drive business growth.

Instantly publish and conveniently revise

With iArtist Lite you can save your designs as different projects and upload them to multiple QNAP NAS with Signage Station installed. Whenever you want to revise the content, just open iArtist Lite to update and publish instantly. You can fully control all your content in a timely way.

Absolutely easy-to-use

iArtist Lite provides a drag-and-drop interface that allows you to flexibly embed videos, marquees, pictures, and PowerPoint® slides on the canvas panel. With the layered playlist and timeline features, you can freely arrange the order of media objects. iArtist Lite also offers numerous templates for various scenarios, saving you lots of time & effort. Useful widgets such as audio, clock, RSS are also available to add to the designed content.

Collaboration increasing efficiency

The original content can be saved on a local computer or a QNAP NAS with the help of the connection wizard. Content saved on a QNAP NAS is accessible for every authorized user to increase the work efficiency in projects involving multiple members.

Ready-to-use templates

It offers professional, quality templates that differ from the bland playback effects of most other animated signs. With an animation display mode, and high-resolution audiovisual playback, you only need to click on your mouse to download free advertisement templates, which will help to create attractive signs to improve your business.

Selected QNAP template examples

Sports bar

Inform customers about special deals and the TV schedule for sporting events.

Healthcare center

Advice and notices can be easily shared and broadcasted throughout the health center to inform patients and staff alike.

Selected furniture

Showcase the available furniture with attractive graphics and animations.

Trendsetter

Allow your customer to get the latest trends and fashion information.

Dream hotel

Introduce visitors to an animated walkthrough of available rooms and facilities.

Easily create ad content with iArtist Lite (For PC):

You only need to drag and drop media files on the iArtist Lite canvas, where you can quickly produce professional content. First select the device to be displayed on (tablet, TV, etc) and then resolution and layout (portrait or landscape) depending on how the device will be placed.

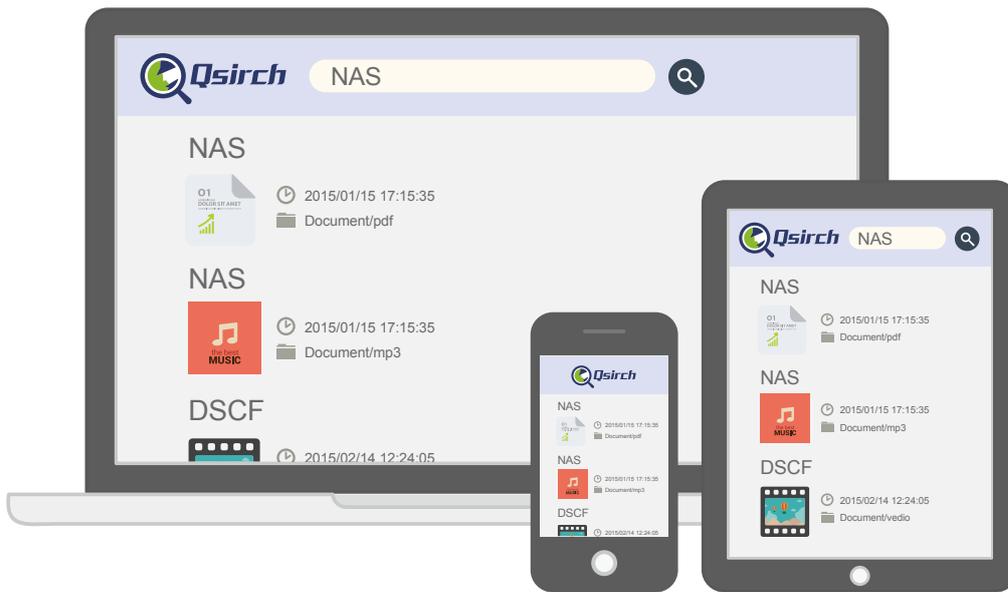

Qsirch 2.2

Search for everything on your QNAP NAS

QNAP NAS are converged storage solutions able to store huge volumes of data and provide users with tools and utilities to make use of that data. The first utility users need is the ability to find their data. Qsirch simplifies and accelerates searching for files on a QNAP NAS.

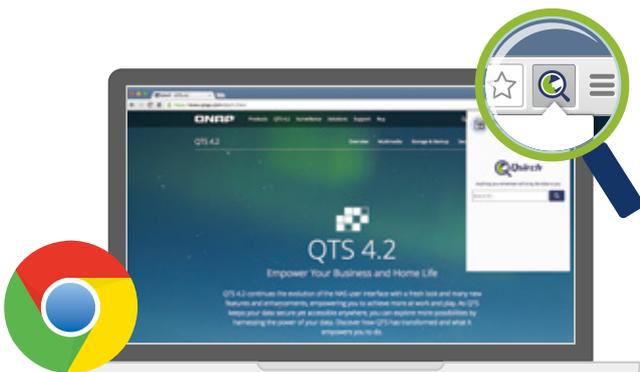

QNAP exclusive, smarter search engine

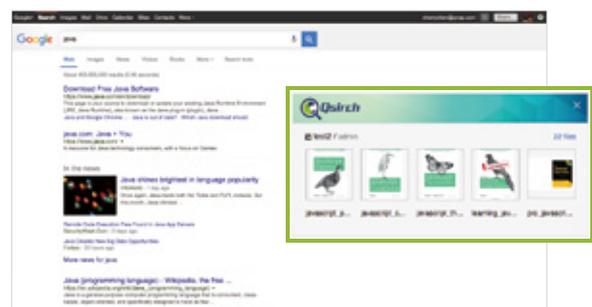

Qsirch uses fine-grained indexing conditions in combination with its full-text search capabilities to support searching over 6,000 file types. Powered by TF-IDF (Term frequency - Inverse document frequency) algorithm and a near real-time search engine, the Qsirch enables users to search while typing and sort through files faster and more precisely. Moreover, the real-time suggestions ease your search and improve the overall user experience.

Qsirch browser add-on for Google Chrome™

Install the Qsirch add-on to enable Qsirch from your web browser. Simply click on the Qsirch icon on the right of the address bar to search Google and your QNAP NAS simultaneously. Your Qsirch and Google search results will appear side-by-side for time-saving convenient comparison.

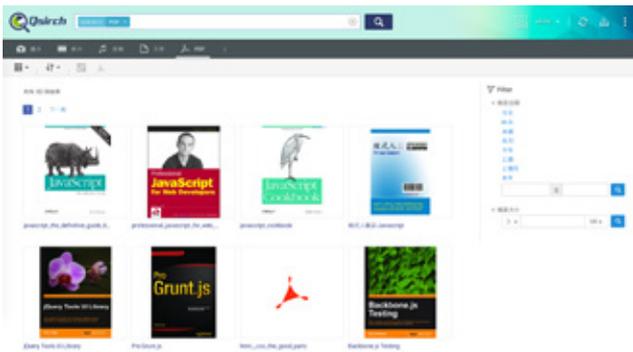

• Chrome add-on Qsirch Helper

• Simultaneous search on Google®

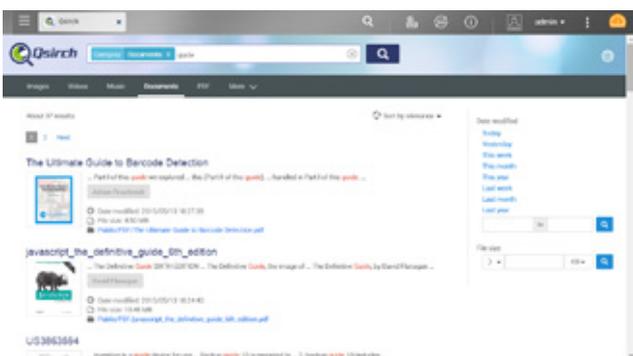

Organization of results by type, and other attributes

Your search results can be filtered and organized by types including photos, music, videos, and documents. This organization enables you to locate your desired results faster. Results can also be organized based on criteria such as date modified, file size, and many other standard file descriptors.

Content Preview

Thumbnail previews for photo, videos, and PDFs makes searching and browsing through voluminous data a lot faster, while the highlighted keywords found within documents further helps you to quickly find what you're looking for. Moreover, the Gmail preview function enables you to preview emails and your Gmail backup files easily and quickly.

Share directly from your search results

Qsirch 2.1 displays previews of your search results. Save time and share the content of your search results, directly from the previews. It could not be easier!

File Indexing Status

File indexing runs as a background task, enabling you to oversee the indexing progress and status. This feature can also be used to exclude folders from indexing.

Saved searches for records

Save your search records browse through them later to assist your search. Frequently-used search criteria is saved automatically to improve the auto-complete giving you more accurate suggestions for your search terms every time.

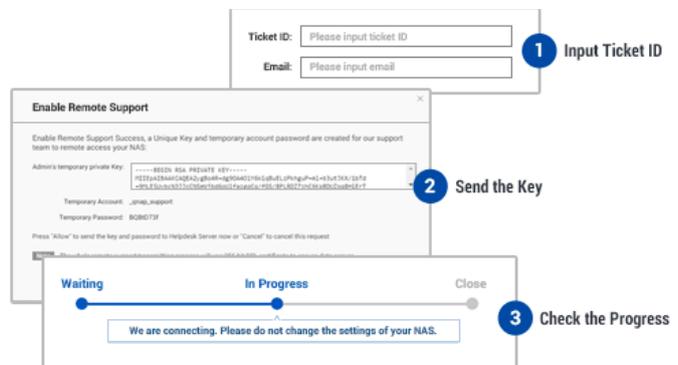

QNAP Helpdesk Instant technical support

Use the built-in Helpdesk app to instantly report issues and to enable QNAP support engineers to securely and remotely troubleshoot your NAS over an encrypted remote connection.

Secure remote support services

Once our support engineers confirm your remote connection request, you can enable the remote support service*. QNAP helpdesk will automatically create a support service account to enable the support team to remotely connect to your NAS over a dedicated, recorded, and encrypted connection (256-bit SSL). This can quickly solve your issues and ensures data security.

Please read the Helpdesk Terms of Service before you enable the remote support service.

Instantly send support requests and receive responses within 24 hours

Helpdesk* enables you to directly send support requests to QNAP support engineers and it will automatically collect necessary troubleshooting information, including the firmware version, RAID configuration, system events and logs. This automatic information collection will help us to properly address your request within 24 hours** and provide you with the help you need in a timely manner.

*Install the Helpdesk app from the App Center if you are using an earlier firmware version of QTS.

**Response times may vary due to time zones and does not include holidays.

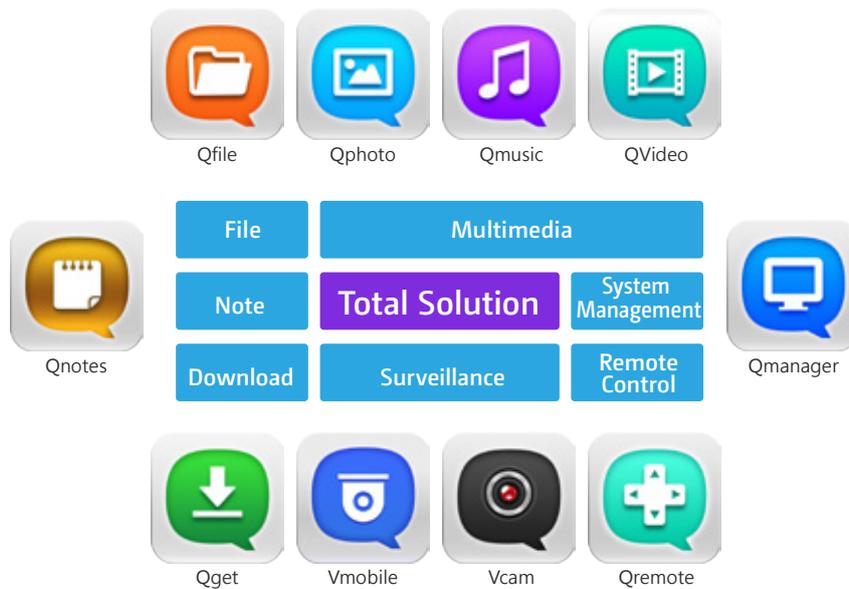

Your feedback counts

We want Helpdesk to be more than a channel for technical support. We would like users to provide suggestions, feedback, and feature requests on Helpdesk for existing apps. We value all such comments highly and will track their development. Through this platform, you can help us to help you.

QNAP Mobile Apps

Convenient access to QNAP NAS from mobile devices

Mobile devices are the increasingly preferred method for Internet and NAS access. QNAP has introduced a suite of mobile apps to help users access their NAS from mobile devices.

Automatically upload your vacation photos from your smart phone

Photos on your mobile device can be automatically uploaded to your NAS, allowing you to focus on your vacation instead of worrying about running out of space on your mobile device.

Easily share large files with friends and families

Sharing huge files is extremely easy with QNAP mobile apps. Share them from wherever, and whenever you want.

Browse files stored on your NAS

Access your multimedia (photos, videos and music) and office documents (Microsoft® Word, Excel®, or PDF) stored on your NAS using your mobile device.

Manage services on your NAS with ease

Check the status of your NAS and enable or disable application services remotely from your mobile device.

Qfile 2.0

Access files stored on your NAS remotely

Supports iOS (iPhone and iPad), Android™ devices (phone and tablet), and Window® phones.

Versatile and real-time file management

Remotely upload/download, share, manage, and stream files from your QNAP NAS and synchronize files between the NAS and your mobile device.

Remote file access

File thumbnails help you easily identify file types at a glance, allowing you to locate music, videos, and photos rapidly. Stream multimedia files to your mobile device, turning it into a mobile media player.

Efficient storage use for your mobile phone

Manually or automatically back up photos and music stored on your mobile phone to your QNAP NAS and download documents to your mobile devices for offline reading.

Folder and file sharing

Create download links for shared folders or files to share via email, SMS or mobile apps, or email the files as attachment

Using Qfile

Tap "+" to add a NAS.

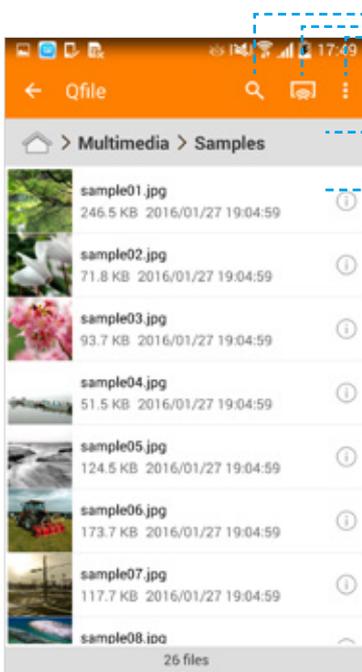

Qfile will search for a QNAP NAS on your LAN. Tap on one of the NAS to add it.

Tap "Add NAS manually" if you are not at your home.

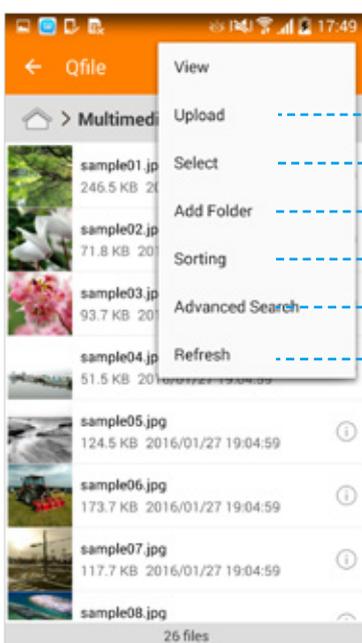

Qfile will save your login details after you successfully log in to a NAS the first time, and you won't need to enter login details later.

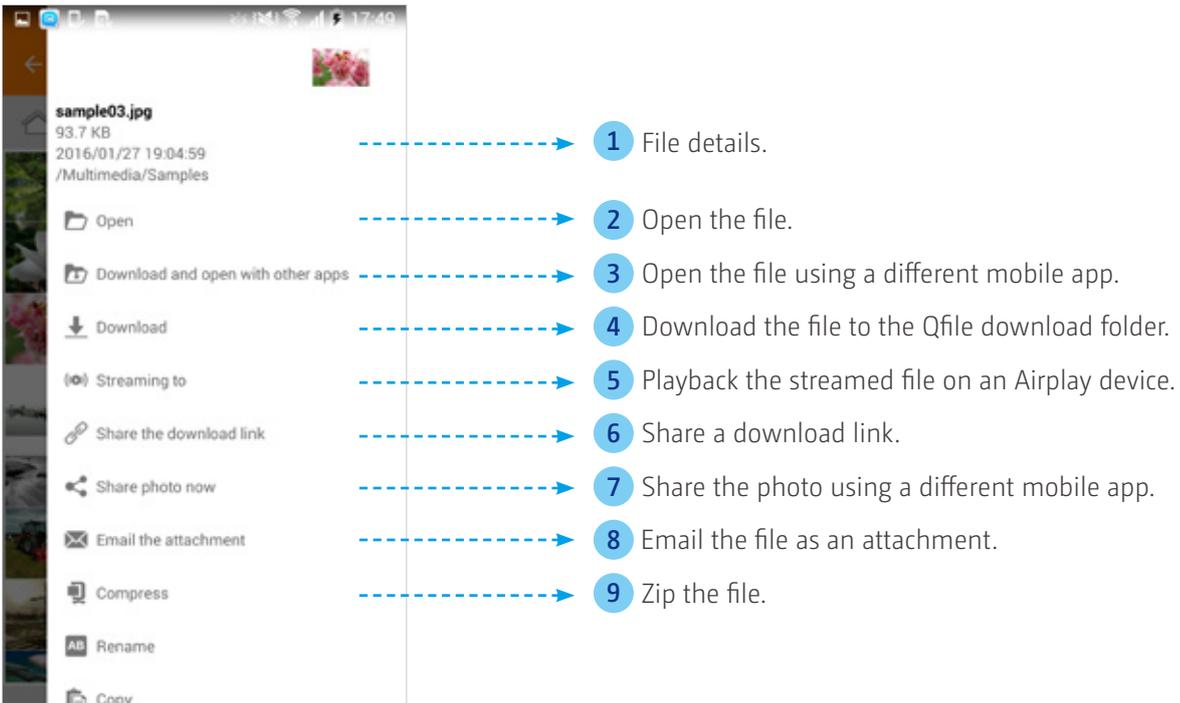

Access files and folders on your NAS after your login.

- 1 Tap to open a file.
- 2 File path: Click to quickly change your location.
- 3 Search files.
- 4 Multimedia streaming
- 5 More functions.

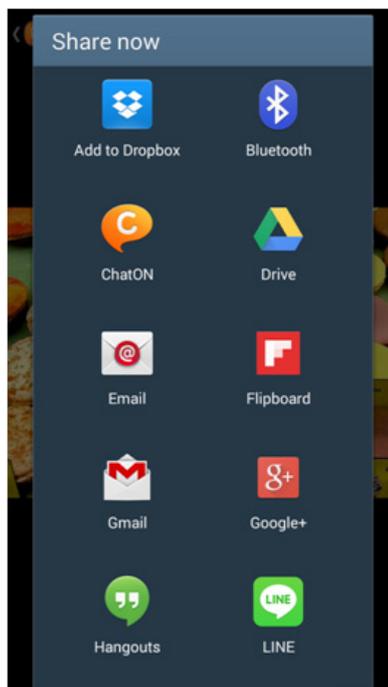

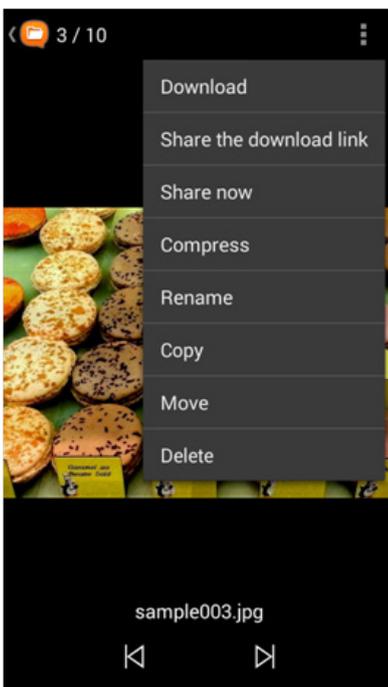

- 7 Upload files to the NAS and supported upload options: Upload photos from the photo library or camera, upload files from the Qfile download folder, and upload files from the local download folder (this option is only supported for Android™ devices.)
- 8 Enable multi-select mode.
- 9 Add a new folder.
- 10 Sort: Sort files by filename, size, modified date or file attribute.
- 11 Advanced search: Quickly locate files you are looking for based on file size, modified date, filename or user. The thumbnail preview feature allows you to instantly preview the file in a simpler and intuitive approach.
- 12 Refresh the current page.

Three file sharing methods:

1. Directly share photos you are browsing on social networks using messenger apps.
2. Share files as email attachments.
3. Create download links. To share a large file, you can create a download link in Qfile and share that download link on social network sites, in an email, or an SMS message. The recipient will be able to directly download the shared file using the link you provided.

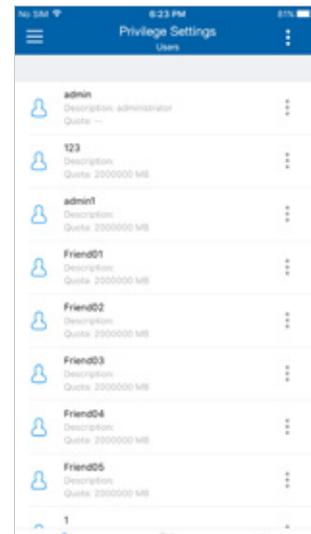

Qmanager 2.0

Remotely manage and monitor your QNAP NAS

Supports iOS® (iPhone® and iPad®) and Android™ devices (phone and tablet).

Manage your private cloud

Monitor your system information, check backup tasks, system events, and manage services.

Manage system services

Get up to date about system status. Remotely pause/run backup tasks and enable/disable application services or third-party Apps.

Manage users and shared folder privileges

Check user settings, user group settings, and shared folder status. The intuitive interface enables simple management efficiency.

Manage download/backup tasks

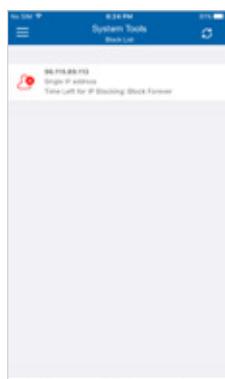

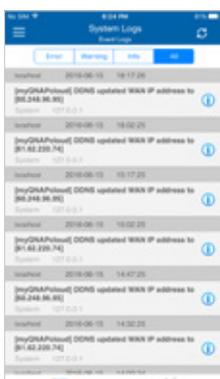

Check backup task information and initiate saved backup tasks.

Monitor system status

Review system and connection records, restart or shutdown your QNAP NAS remotely, wake up your NAS with WOL, and safely unmount external devices.

Push notification

Check system events, real-time updates, and receive important push notifications on your mobile device.

Windows Phone

Available on the App Store

Google play

Qphoto 2.0

Share photos on your NAS on the go

NEW

Supports iOS (iPhone and iPad), Android™ devices (phone and tablet), and Windows Phone.

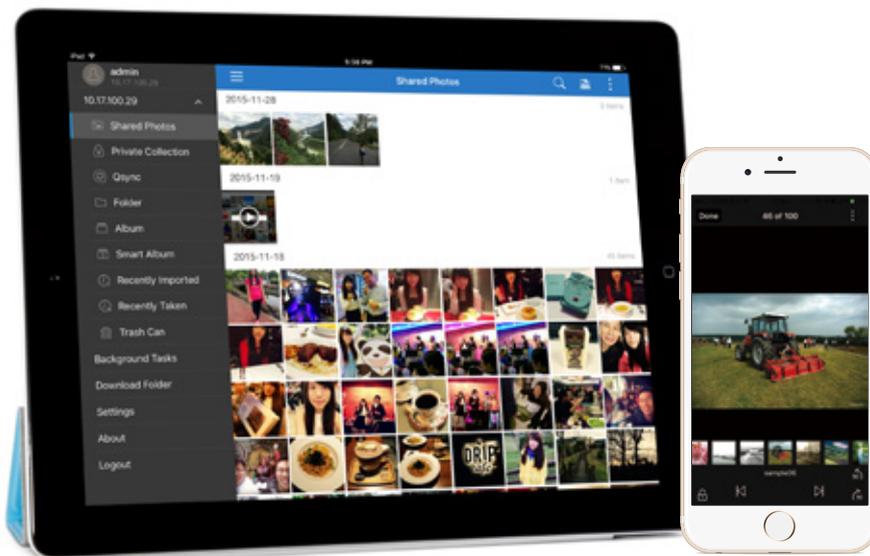

Photo browsing

Browse your photo collection using a timeline view, thumbnails, detailed list view, and folders.

Easily search for photos

Use keywords or tags to easily find specific photos & videos on your QNAP NAS.

Enjoy slideshows

Create and enjoy slideshows with photos and background music from your mobile devices.

Save your great moments

Upload photos directly to your QNAP NAS from your device camera, camera roll, or from the SD card to save your great moments.

Private Collection

Archive personal photos in the password-protected "Private Collection". Your private photos cannot be accessed by other NAS users.

Instant photo sharing

Share photos from your QNAP NAS via Facebook™, Twitter™, Google+™, WhatsApp®, Line™, Instagram™, Gmail™, and more.

Sync photos with NAS

Qphoto supports Qsync file synchronization across Qsync-enabled devices/applications and a QNAP NAS. If photos or videos are accidentally deleted from your mobile devices, you can recover them from the "Trash Can".

Windows Phone

Available on the App Store

Google play

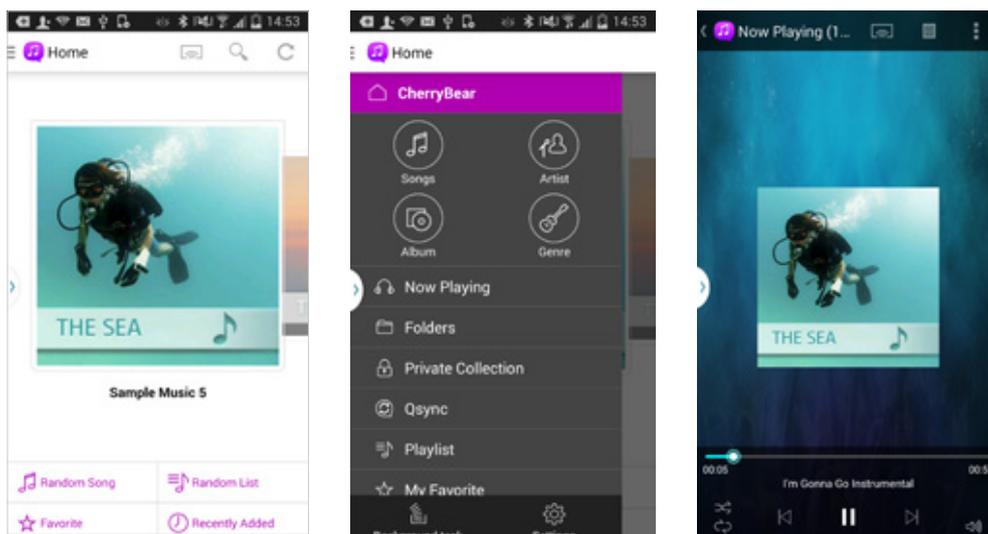

Qmusic 2.0

Listen to music stored on your NAS

Supports iOS® (iPhone® and iPad®), Android™ devices (phone and tablet), and Windows Phone®.

Play music on demand

Easily connect to your QNAP NAS and play your music collection from the intuitive interface.

Browse your music library remotely

Browse your music collection on your QNAP NAS by song, artist, album, or folder.

Play music offline

Click the "Download" button to instantly download the music from your QNAP NAS to your mobile device for offline listening. The music never stops even when the Internet is not available.

Enjoy music with one click

Various ways to play music immediately: Random song, Random playlist, My favorites, and Recently added.

Edit playlists online

Easily create playlists, edit the playlist contents, or add the songs in the "Now playing" list to the playlist.

Windows Phone

Available on the App Store

Google play

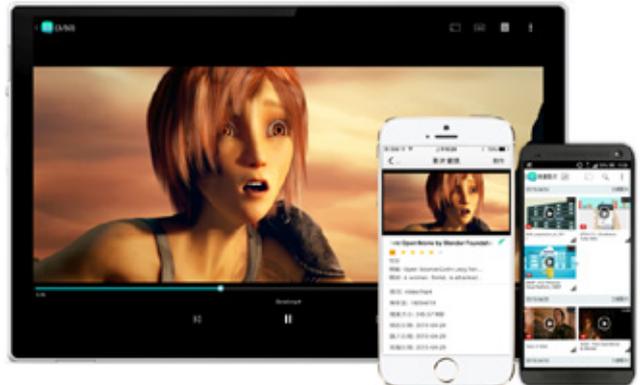

Qvideo 2.0

Watch videos stored on your NAS

Supports iOS (iPhone and iPad), Android™ devices (phone and tablet), and Windows® phones.

Friendly user interface

Qvideo is a free mobile video management tool for Video Station and allows you to enjoy and share your videos and movies stored on your QNAP NAS with friends and family. Since it adopts the same UI style as Video Station, it is easy-to-use and intuitive.

Supports streaming to DLNA®, AirPlay®, and Chromecast™ devices

Use Qvideo as a remote control to enjoy videos with the ones you love.

Miniplayer

With the new Miniplayer feature supported, you can continue to add videos during playback.

Download and watch videos anywhere you go

Download videos on your NAS to Qvideo at home and you can then watch them during your trip.

Share video collections

Qvideo is integrated with popular social networks and messenger apps. Sharing videos with friends and family using Qvideo cannot be any easier.

Windows Phone

Available on the App Store

Google play

Qnote 1.1

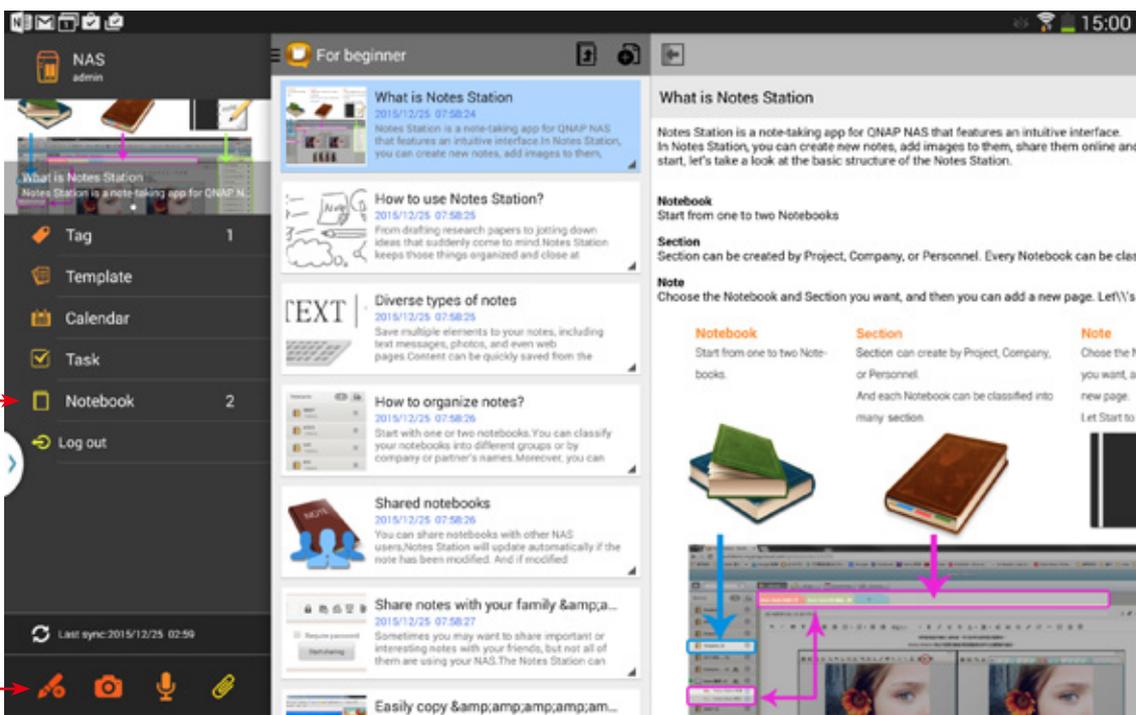

Taking and sharing notes on the go

Qnotes provides an effective way to take notes with high privacy. It is the only Android note taking app that supports a private cloud. Qnotes can either sync data with other devices via QNAP NAS or works alone without any NAS or Internet.

Supports iOS (iPhone and iPad), AndroidTM devices (phone and tablet), and Window® phones.

Three tier architecture

The three-tier architecture adopted in Notes Station enables you to effectively manage, organize and find your notes. You can start from a notebook and then systematically work your way through a section and a note to easily find the note you look for.

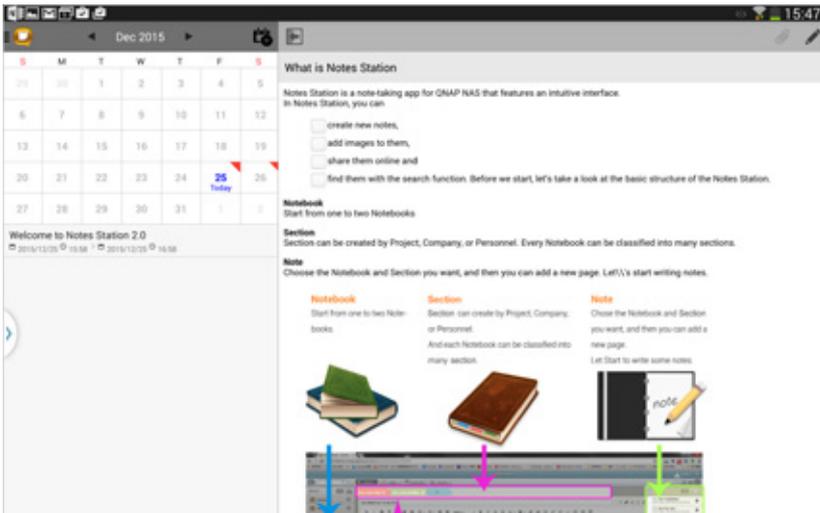

Three note taking styles

There are three types of note available in Qnotes: text, picture, and voice memo. Users can choose the form as needed to take notes. Additionally, add documents as attachments to a note to keep relevant, supporting information on hand easily.

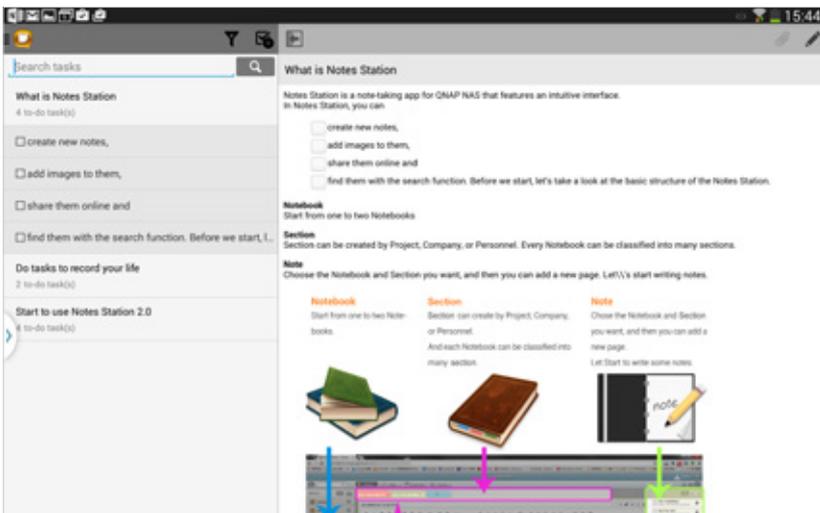

Calendar

Calendar is very handy for busy users. With Qnotes, you don't have to switch pages just to add an event to Calendar. Just a tap and you can combine a calendar and note and review them together.

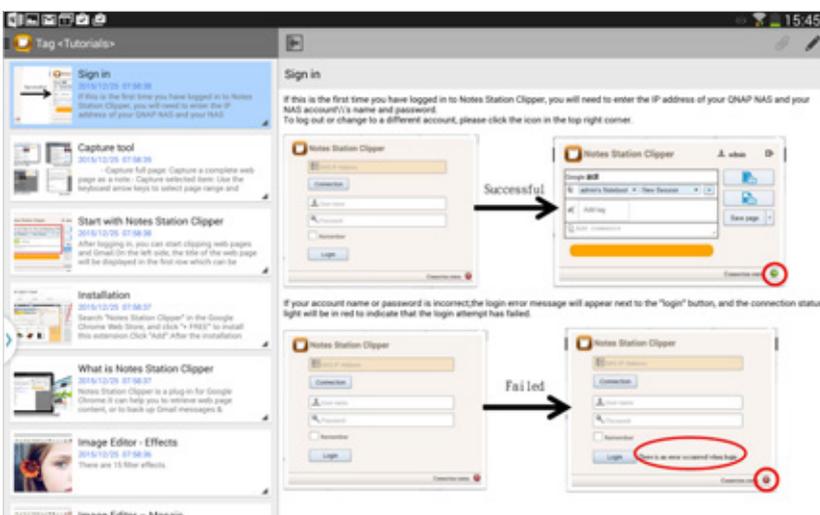

To-do list

You can directly add an item into a To-do list as you edit a note without your thoughts being interrupted.

Tag

Qnotes supports note tagging making it easy to find notes later. This feature is especially useful if you create lots of notes.

Qget 1.3

Remotely manage download tasks

Supports Android™ devices (phone and tablet).

Manage download tasks

Conveniently review and manage all of your download tasks (including running, pausing, and removing tasks). You will receive a notification from Qget after a download task is complete.

Back up videos from video sharing sites

Use HappyGet™* to backup online videos to your QNAP NAS with with a single tap.

* HappyGet is a third-party application available in QNAP App Center for backing up videos from video sharing sites.

Download files on the go

Using the built-in web browser, you can add tasks to the Download Station with a direct download link (HTTP/FTP/Magnet/Thunder®/FlashGet™/qqdl link).

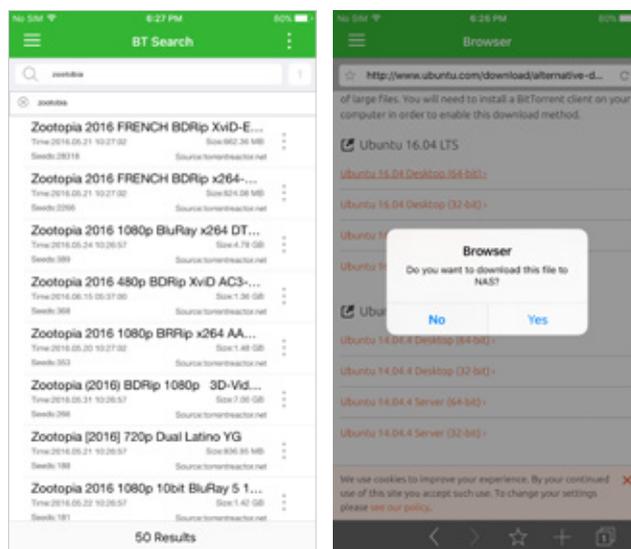

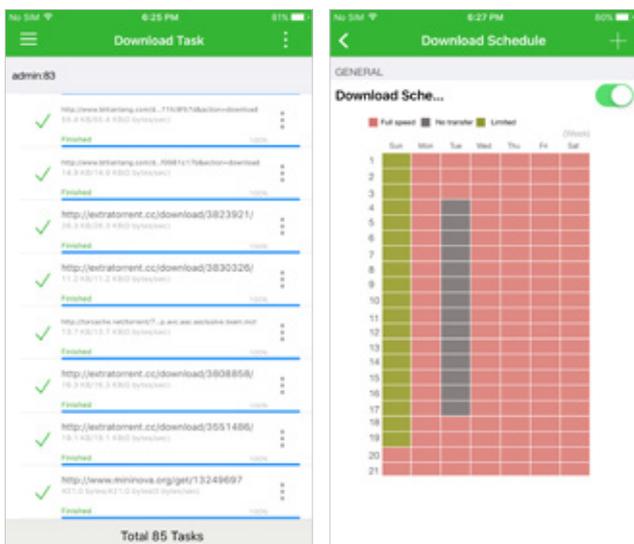

Add download tasks

Manually enter download links or directly upload

torrent files in Qget to create download tasks in Download Station.

BitTorrent® search

Search desired BitTorrent® files in a few seconds and add them to the Download Station.

Vmobile 2.0 Professional mobile surveillance app

 Supports iOS® (iPhone® and iPad®) and Android™ devices (phone and tablet).

Mobile surveillance

Access your surveillance system to manage and monitor IP cameras anytime, anywhere.

Profile management

Create multiple profiles with different sets of VioStor NVR/ QNAP NAS and IP cameras, and efficiently switch between different monitoring views from the profile list.

PTZ control and preset position control

PTZ (Pan/Tilt/Zoom) cameras can be controlled directly from mobile devices. Easily adjust the monitoring angles and preset monitoring position on the go.

Event notification

When an event occurs, Vmobile can notify by ringtone, push notifications, or vibration to alert you immediately.

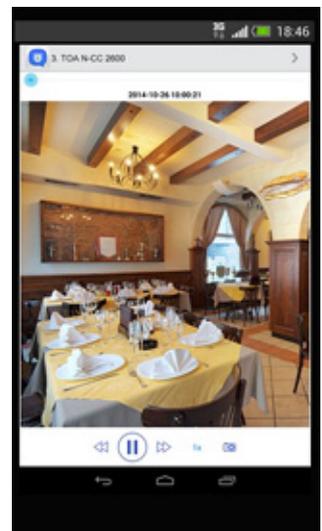

Recording playback

After you receive event notifications, you can tap the event logs to directly play them and to see the incident for yourself.

Low bandwidth mode

If you have a slow Internet connection, you can select a stream optimized for low bandwidth to provide smoother video playback. The quality of the video recording will not be affected.

Video playback

Slide the timeline to playback recorded videos conveniently. Also choose to playback alarm events only for quick review.

Quick search by date and time

Search a specific video section by date and time, quickly and precisely.

Vcam 1.0

Turn your mobile device into an IP cam

Supports iOS® (iPhone® and iPad®) and Android™ devices (phone and tablet).

Vcam mobile app

Use Vcam to directly record your surroundings using your mobile device's camera to your QNAP NAS anywhere you go without having to purchase professional IP cameras.

Qremote 1.1

Control HD Station with your mobile phone

Supports iOS® (iPhone® and iPad®) and Android™ devices (phone and tablet).

Multimedia content playback

Remotely control playback of videos, music and photos stored in a QNAP NAS, stream and enjoy multimedia files on a TV with Qremote (installed on your mobile device) without needing additional peripherals like a controller, USB keyboard or mouse.

Switch among applications

Enjoy the convenience of switching among applications including Kodi™, YouTube™, Google Chrome™, and QTS with ease.

Computer Utilities

Boost your productivity

QNAP offers many computer utilities for you to connect to your NAS effortlessly. With all these utilities, you'll be able to install a QNAP NAS quickly, set up backup jobs, upload files to the NAS, and synchronize files across all of your devices.

Qfinder Pro Search, connect and set up your QNAP NAS

Qfinder Pro assists in finding, setting up and accessing a QNAP NAS on local network. Install Qfinder Pro on your computer, open it, and double click your QNAP NAS name, and the login page is ready for you.

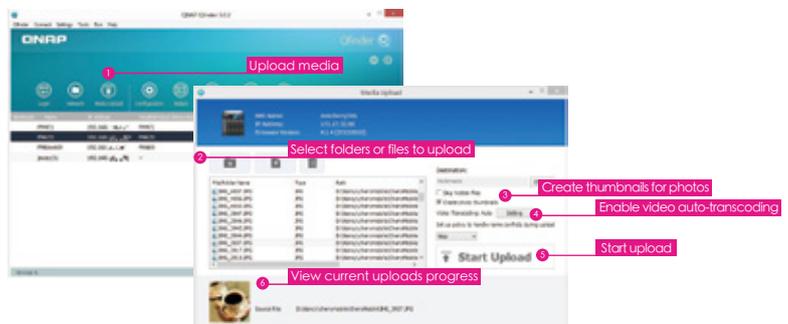

Available for Windows®, Mac, Linux®, and the Google Chrome™ Browser.

Easily access the NAS by Storage Plug & Connect

The Windows version of Qfinder Pro provides a convenient way to connect to QNAP NAS and map a network drive or a virtual disk. By creating a shared folder on the QNAP NAS and mapping it as a network drive, you can use it as an additional drive and store files on it as it is a local drive of the computer.

Use Qfinder Pro for media uploading

Qfinder Pro helps you find and access a QNAP NAS in the LAN and can be used to generate thumbnails for media files in advance of file upload, accelerating media file processing and improving user experience.

myQNAPcloud Connect VPN portal to your QNAP NAS

myQNAPcloud Connect is a VPN application designed for all Windows® users and supports all VPN options to connect to a QNAP NAS (including L2TP/IPsec, PPTP and OpenVPN®). By installing and setting up myQNAPcloud Connect, you will be able to connect to the QNAP NAS and easily manage files by drag-and-drop actions.

Available for Windows®.

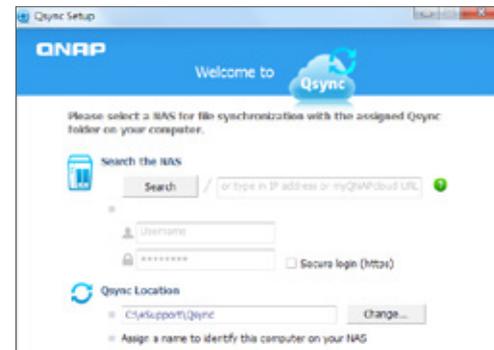

Qsync Sync files anytime and everywhere

Qsync is a useful tool to synchronize files across multiple computers and supports Windows and Mac. It creates a specific "Qsync folder" in your devices that you can simply drop files in, and synchronizes the files to all your devices linked to the QNAP NAS. For more information, refer to the Qsync Center Station 2.0 section in this catalog.

Available for Windows® and OS X®.

NetBak Replicator Free PC backup software

QNAP NetBak Replicator is free for anyone with a QNAP NAS. NetBak Replicator helps users back up entire drives, documents, pictures, music, videos, fonts, emails, and more from a Windows® PC to a QNAP NAS easily. Set up real-time backup, scheduled backups, auto-backups, auto-power off after the backup is finished to save energy, filters to exclude files from back up, and email notification when backup is completed with just a few clicks. NetBak Replicator also supports backing up to a remote server via FTP and WebDAV over the Internet. This enables you to backup new photos even on vacation. Convenient, secure backup for your memories.

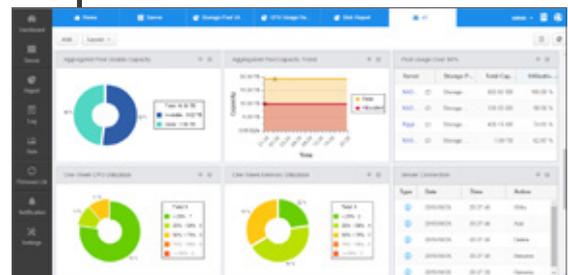

Available for Windows®.

Q'center Virtual Appliance Use Q'center to monitor multiple NAS

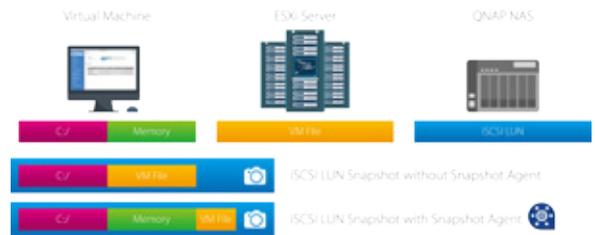

Q'center is a powerful QNAP NAS management system. The Q'center Virtual Appliance can be easily deployed in Microsoft® Hyper-V™ or VMware® ESXi™ to increase its flexibility and connectivity for large storage environments

QNAP Snapshot Agent Ensures consistent snapshots

When creating a LUN snapshot, QNAP Snapshot Agent for Windows Server or VMware vCenter allows the NAS to communicate with the remote server when taking snapshots and ensures application-consistent LUN snapshots.

vSphere Client plug-in Manage QNAP NAS within vSphere Client

QNAP NAS supports VMware vSphere® Client Plug-in that enables management of VMware® datastores on the NAS from the VMware vSphere® client console. In a large-scale server virtualization environment, management is centralized and straightforward. Administrators can easily control the status of the QNAP NAS and datastores and create additional datastores to multiple VMware ESXi™ hosts in just a few clicks.

Available for Windows®. The TS-x51 series doesn't support the VMware vSphere® Client plug-in.

QNAP SMI-S provider

The QNAP SMI-S provider allows you to manage the QNAP NAS directly through Microsoft System Center Virtual Machine Manager 2012 (SCVMM).

Qsnap Take screenshots, quickly and easily

Qsnap is a handy utility assisting you to quickly capture screenshots on your PC, and easily edit, save, and share, enabling quick note-taking or productive communication in your work and leisure.

- Hotkey capturing: Taking PC screenshots without complicated mouse operations.
- Easy editing: Add emphasis or remove unnecessary elements with a range of editing tools.
- Instant sharing: Simply drag and drop the screenshots to instant messengers and emails as attachments to share.

Available for Windows®.
